Moreover, the economic standards of Soviet mining and metallurgy are still poor, because the productivity of labor is still low and technology is, in practice, not yet equal to Western standards. Thus, there is a considerable loss of metals that could be recovered by more efficient methods.

But, for the time being, these economic considerations have been of secondary importance in the Soviet Union, and the development of the nonferrous industries has not been hampered by high costs of production. The Soviet Government, in setting the planned targets, insisted on only a gradual lowering of costs of production and improvement in the productivity of labor.

In the present 7-year plan, however, this problem has been given special emphasis, and a big reduction in production costs is expected during that period.

Bolder U.S. Action on Cuba Required To Safeguard Freedom From Castro

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial by the editor of the News and Courier, Charleston, S.C., newspaper on Fidel Castro.

The editorial follows:

BOLDER U.S. ACTION ON CUBA REQUIRED TO SAFEGUARD FREEDOM FROM CASTRO

In rallying the Cuban mob, Fidel Castro is goading the United States ever more surely toward decisive action. Unwilling though our Government may be, it cannot put off indefinitely adopting firmer means of curbing the bearded dictator.

If Washington continues to do nothing, a "people's republic" soon will be in full bloom 100 miles off the Florida coast and a new staging area for Soviet power will take shape.

Polite treatment of Castro has not made him act respectably. American property has been seized. U.S. citizens have been put in jail. Castro has rejected friendship with the country that liberated Cuba in 1898. He has joined the Communist bloc in the United Nations. The direction in which he is leading must not be misinterpreted.

The latest outrageous act, an abusive speech against the Spanish Ambassador to Cuba, was not without design. Cuban middle and upper classes have strong emotional ties to Spain. They regard Spain with the same kind of affection that many Americans feel for England. By striking at Spain, Castro would discredit moderate elements in Cuba. If he can link Spain, which is disliked by Latin America's leftwing intellectuals, with Washington, he will have gained another point in his propaganda war against the United States.

The Associated Press reports that U.S. Ambassador Philip Bonsal now believes a new policy is needed with respect to Cuba. If he suggests a crackdown on Castro, it is unlikely the State Department will endorse his recommendations. The State Department has a long history of resisting bold measures against world communism. Such firmness

as exists in U.S. policies comes from the Defense Department.

The American press has changed its tune on Castro. Influential newspapers such as the Washington Post and the Chicago Daily News, once strongly pro-Castro, now condemn him. The public is getting into a frame of mind for action against the Cuban dictatorship.

Though the State Department in 1934 signed away the specific right to intervene in Cuba, the Monroe Doctrine is still the Nation's basic guide for this hemisphere. This 137-year-old document established a permanent U.S. policy of barring European powers from taking over Latin American governments. While European Communists are not in direct control of Cuba, Castro's lieutenants are leftists who follow the international Communist line. Thus the United States has a doctrinal basis for intervention.

But what sort of action should the United States take in Cuba? The answer, in our judgment, is whatever may be necessary. If Americans will do what's necessary to hold a string of little islands 5 miles off the mainland of China, they should not lack for boldness in Cuba.

The first logical step to restore freedom in Cuba is to withhold the sugar subsidy, which Castro's government needs to prop up the economy. Next could come withdrawal of U.S. recognition, an embargo on trade, and support of a Free Cuba movement in the United States.

Beyond this is the possibility of direct U.S. military intervention, should revolt occur. As in Lebanon, the United States would have to go in quickly and get out just as fast.

If the U.S. Government could act in Lebanon, which is across the world, it could act in Cuba at its own doorstep. All that's necessary is for the public to get adjusted to the idea. Military intervention may seem too drastic at the moment, but we believe the public is ready for initial steps. If these are successful, it may not be necessary to send marines to Cuba.

One way or another, communism must be barred from the New World.

Address by Ambassador Henry Cabot Lodge at the Dinner With Ike, January 27, 1960, in Pittsburgh, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. FULTON. Mr. Speaker, on January 27, 1960, Republicans all over our good country celebrated the seventh anniversary of the day our President, Dwight David Eisenhower, moved into the White House. This celebration was marked by 80 dinners with Ike across the Nation. The common link between these affairs, other than our good President and our party, was the closed circuit televised program from the various regional dinners, and the speech by the President from the dinner he was attending in California.

Our western Pennsylvania people held their celebration in the new Pittsburgh Hilton Hotel, and we were privileged to hear, as the main speaker, Ambassador Henry Cabot Lodge, chief delegate and the permanent representative of the United States at the United Nations.

It was a pleasure to serve under the leadership of Cabot Lodge this past fall, when I served, on appointment by the President, as one of the U.S. delegates to the 14th General Assembly of the United Nations.

Ambassador Lodge is competent, intelligent, and one of our most outstanding U.S. statesmen. It is a pleasure, under leave to extend my remarks in the RECORD, to call the distinguished speech by Ambassador Lodge to the attention of my colleagues in the Congress and the people of the United States.

The address follows:

ADDRESS BY HENRY CABOT LODGE, U.S. REPRESENTATIVE TO THE UNITED NATIONS, AT THE DINNER WITH IKE SEVENTH ANNIVERSARY CELEBRATION, PITTSBURGH, PA., JANUARY 27

Mr. Chairman, distinguished guests, and my fellow guests at this dinner with Ike, like many millions of Americans I often saluted General Eisenhower. Tonight many millions more salute him as our beloved President who enters his last year of service in the White House.

We salute him because we recognize that by any standard he deserves the finest tribute we can pay.

When you ask yourself what can fairly be expected of government here at home, you find that his administration meets every test: Conditions have been created which have made prosperity possible. The steel strike has been settled—with a strong helping hand from our hard working Vice President RICHARD NIXON. There is high employment and excellent prospects for future growth.

That is one test.

Then, his innate goodness and decency have raised the tone of public life in America, just as they have won increased regard and respect for us abroad.

And these things have been done without standing pat. Throughout his administration there has been a sense of change and hope and innovation in the air—and America without change is not America.

When we look abroad, we salute him because of all that he has done for peace. None of the good things of life would be possible if war were to come. We point, therefore, to many specifics: To the treaties which tie us to our allies; to our military strength without which war cannot possibly be prevented; to the economic aid which enables us to exert leadership in that whole section of the world which is less developed; to the vision which seeks to move us on to a new plateau in which peace with justice will prevail.

We honor him for refusing to let the Monroe Doctrine be subverted and Guatemala taken over by communism; for standing up for the Charter of the United Nations at the time of the Suez incident; for putting U.S. troops into Lebanon—and then withdrawing them; for taking a stand in the tense Straits of Formosa whereby we have avoided war and at the same time have given up nothing; for being steadfast in support of the rights of West Berlin; for using the Security Council of the United Nations as recently as last September to prevent the Communist absorption of Laos—in a word, for striving to live up to the United Nations Charter (the only code of behavior for governments) and to persuade others to live up to it.

Just the mention of these things reminds us of how turbulent the world is—how full of dangers—and how full of opportunities.

We know that we in America have changed much in the last few years and are still changing.

We can see that the statements of the Soviet leaders are changing, although basic policies still appear unchanged. Certainly in the tour of the United States last September which I made with a certain well-known foreign visitor I heard him say many things which no Soviet spokesman had ever said before—that he was confident the American people and the American Government were united; that a future war would devastate the Communist world as it would the free world; that he could see that the "slaves of capitalism" lived well; and even that while he had communism in his head he had San Francisco in his heart—and I might add that the word "Pittsburgh" could well have been substituted for San Francisco because his reception here was equally courteous and correct.

In a world changing so fast we must be flexible in method. We must beware of talk of a broad trend in foreign relations or of a thaw or of a freeze or of a tough policy or of a soft policy. Foreign policy can only be described in terms which are deadly to those who think only in terms of black and white. We talk about the so-called less developed countries—and I have just done so—and yet every single one of them is different. Indeed every diplomatic situation which arises between the same two countries is a different situation.

At the recently finished General Assembly of the United Nations we attacked the Soviet Union vigorously on the question of Hungary—and we were right to do so. We reached an agreement with them on setting up a committee on outer space—and we were right to do that. Our relationship with the Soviet Union is not a sporting event. We are trying to survive; we are trying to do our part as a leading nation in making a world order in which all peoples can have life, liberty, and the pursuit of happiness. We can only build such a world if we take each question on its merits—and not on the basis of some shibboleth.

Mr. Khrushchev's visit was a useful episode both because it informed him about us and because it aroused and stimulated the Americans who saw him. It must not—and will not—become a soporific which makes the American people and Congress feel that we can reduce our expenditures for the military, or that we can weaken our insistence that honest inspection be an integral part of any disarmament agreement.

We salute Dwight Eisenhower because he has this very gift of seeing things in perspective and in proportion. He can see that a thing is good and that it should be done—without yielding to the pressure which says that it should be done immediately and in a ruinous way.

He has taught us that we need a military establishment with which we can live year in and year out—not because a military establishment will bring peace, but because without it we cannot prevent war.

We salute Dwight Eisenhower because he has seen that economic aid to the less developed countries is a necessity. It can clearly be defended on moral grounds, since it is a human duty to help one's neighbor as well as a fine old generous American tradition. It can clearly be defended on political grounds for the reason that if we leave this field to others we stand a very good chance of having large areas of the world turned against us. It can, I believe, however, chiefly be argued on a business basis—that in most of these countries there are valuable resources and that if we are good bankers in the broad sense of the term we can over the years reap great economic advantages—in fact that it is hard to see how we can achieve the economic growth in this country which we want and need without the development of other lands.

We salute Dwight Eisenhower because he exemplifies the importance of taking the

diplomatic initiative—of leading men's minds—whether it be in his dramatic proposal of atoms for peace delivered at the United Nations in December of 1953—or whether it be by his recent triumphant voyage to the other side of the world.

We salute him because he has had the vision to tell us that after all the chips are down, we will win this struggle for survival on the spiritual plane—or we will not win it at all.

Indeed, we can be powerful militarily; we can conduct a mammoth economic program; we can be bold and resourceful in our diplomacy; we can be clever and artful in our propaganda activities; but none of these will avail unless we practice what we preach.

What we preach is good and what we preach is simple. Our ideals have a stronger appeal for men of all colors and races and creeds than any ideas the world has known. The Declaration of Independence which declares that all men are created equal is infinitely more compelling than the Communist Manifesto. So is the idea that man's material standard can be raised without sacrificing his civil rights.

But we must show that we believe in it ourselves. In our information work, instead of trying to promote the word "capitalism," which has been irretrievably damaged by over a hundred years of attack—and which will never be understood abroad as we understand it in this country—we should seek to promote the ideals of human equality and brotherly love. In our conduct at home we must realize that until racial discrimination has totally disappeared from this country, we can never do the job abroad for others—and for ourselves—that our own survival requires.

We are indeed in a struggle with the Soviet Union. But we must not make the mistake of thinking that our biggest struggle is with the Soviet Union. If the Soviet Union had never existed and if world communism had never existed, we would confront a challenge of unprecedented and burning pressure from the crisis in the less developed countries.

And then there is another of even greater fire, of even greater difficulty—and this too would confront us anyway, regardless of the Soviet Union. That is the challenge presented to us every day by our own ideals—the Declaration of Independence, the words of the prophet Micah to "do justly, love mercy, and walk humbly with thy God" and our Christian ideal of brotherly love.

By living up to these ideals we can win the contest. But the malignant fallacies of communism will win if they are actively supported with enthusiasm—and our noble ideals are allowed to gather dust on some forgotten shelf.

The Eisenhower leadership is great because it rests on the things of the spirit, on what Lincoln called the better angels of our nature, on the need to sacrifice and thus to lead.

We salute Dwight Eisenhower therefore because of his understanding head and his understanding heart, because of his tact and his kindliness and his love of his fellow man.

These are the qualities which the United States needs.

These are the Americanisms which the world likes.

These are the Republicanisms which make our party worthwhile.

Let me in conclusion turn to him and say: We salute you for what you have done. We say "Thank you, Mr. President," and we say further that the best way to show our gratitude is to give ourselves more of this kind of leadership to guide our country through the threatening dangers and to the beckoning opportunities ahead.

We salute you, Mr. President, because, like George Washington, you are first in war, first in peace, and first in the hearts of your countrymen, and unique in the esteem of the whole world.

President Eisenhower Emphasizes the Long-Recognized Need for a Real Overhaul of All the Regulations and Controls Imposed on the Nation's Railroad Industry

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. VAN ZANDT. Mr. Speaker, the following editorial from the January 30, 1960, edition of the Washington Evening Star focuses attention on the plight of the Nation's railroad industry and at the same time reveals the great interest of President Eisenhower in a real overhaul of all the regulations and controls as a step toward giving the carriers a chance to be prosperous.

The editorial follows:

AGREEMENT ON NEED

President Eisenhower was echoing some often emotionally expressed appeals of the railroad industry when he told his news conference that there should be "a real overhaul of all the regulations and controls" as a step toward giving the carriers a "chance to be prosperous." It is doubtful if any railroader would differ with the President's opinion that they are governed "by antiquated laws and regulations" and they have, in fact, pinpointed 1887 as the birth year for today's regulatory antiquities. Modifications in the years since have fallen far short, in the industry's view, of giving it a fair deal in the midtwentieth century transportation economy.

The railroads' complaints are many, and all are not directed exclusively at the Federal Government. They do blame Uncle Sam primarily, however, for placing them at a competitive disadvantage by granting direct or indirect subsidies to other systems of public transportation—highway, air, water, and pipeline. Daniel P. Loomis, president of the Association of American Railroads, recently estimated Federal aid to competitive transport at $17 billion in less than 15 years since World War II. In the same period, he said, the rails spent $14 billion in private capital for their own modernization. They complain, also, of Federal restrictions against diversification (letting the railroads themselves engage in other forms of transportation), of the difficulty in getting approval of mergers which would improve service and utilization of facilities, and prohibitions against more competitive ratemaking.

Many State authorities likewise are villains in the railroad books—because of reluctance to permit local rate changes or to approve abandonment of unprofitable services. Most of all, the States and even local communities are assailed for their heavy tax take. The levy per mile of road in New Jersey, highest in the country, is estimated at five times the national average. Even the featherbedding problem, which the industry claims costs it $500 million yearly for work not done, is blamed in part on State safety laws as well as upon union demands.

Obviously, some of the railroads' problems are of their own making—as Mr. Eisenhower pointed out. Furthermore, the Transportation Act of 1958 dealt favorably with some of the industry's grievances against Federal policy—including ratemaking. Both the Department of Commerce and the Senate Commerce Committee currently are engaged in transportation studies which may lead to further corrective legislation. Whatever the result, the railroads have one sound premise, namely, that the Nation needs them. As basic freight carriers, their service cannot be transferred entirely to any combination of competing systems. If their economic health is not preserved, as a private-enterprise industry, it is not an exaggeration for railroad spokesmen to point to nationalization as the undesirable alternative.

Can We Have Clean Water?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Outdoor America for January 1960.

CAN WE HAVE CLEAN WATER?—SHOULD WE ATTEMPT TO LOAD EACH STREAM TO A MAXIMUM POLLUTION LEVEL, OR ACCEPT THE GREATER CHALLENGE OF REMOVING AS MUCH POLLUTION AS ECONOMICS AND KNOW-HOW PERMIT?

(By Frank Gregg)

We are at this time losing ground on the battle for clean waters. That is the judgment, harsh but measured, of the U.S. Public Health Service.

Hundreds of millions of tax dollars have been invested in treatment facilities by cities and sanitation districts; other millions by the score have been invested in facilities to abate industrial waterborne wastes.

Pollution laws have been and are being continuously strengthened; pollution that was permissible yesterday is prosecuted today.

Researcs—long neglected—has recently been pursued more diligently, if far from adequately.

But we are still losing ground.

What can be done?

A program of speeding these present efforts is essential. One opportunity—expanding the Federal pollution control program as principally sponsored by Congressman BLATNIK—is at hand and the league endorses it, commends it to the Nation, promises to help accomplish it. But, if the lessons of 40 years of league effort are to be applied, the result may be disappointing.

Unless the conservation philosophy is applied to water pollution control, we will continue to lose ground in the battle for clean waters, and will in a fraction of another 40 years have lost the battle itself on all waters receiving any significant industrial or municipal use.

That judgment is harsh, too. It is also measured. Before it can be judged, the league's interest in water quality should be noted.

It is just 30 years since the league was formed by 54 inspired men in Chicago.

And it was in the first issue of this magazine that the league cited pollution as the most pressing conservation problem of the day.

Through volunteer leaders and former staff executives such as Seth Gordon (now a member of the President's Water Pollution

Control Advisory Board), the late Ken Reid (who did yeoman work in the 1948 Federal act), and Bill Voigt (now bossman of the Pennsylvania Fish Commission), the league has had a hand in every major national water pollution control controversy, and in thousands of State and local battles as well.

In 1957 we adjourned a national convention in Washington to help the Congress see the wisdom of reversing a vote to kill Public Law 660.

And at this moment our chapters are planning ways to improve local water quality conditions as a key part of their efforts to preserve shoreline recreation opportunities under the cooperative local-State National league "save our shorelines" program.

The years have forged an Izaak Walton conservation philosophy. It is a multiple-use philosophy, and owes a definite acknowledgment to the Forest Service and its creed of managing resources "for the greatest good of the greatest number in the long run."

Multiple need might mean more than multiple use, however; to talk about uses without talking about the needs those uses serve is nonsense.

For instance, it's one thing to say the public needs power. It's quite a jump from that premise to the conclusion that we must build a single-purpose dam on a unique recreational stream to get it. Other damsites, other energy sources might meet the need; but the aspiring dam builder will always base his case on multiple use. He's wise—he has no case from the standpoint of public need.

Here's an attempt, then, at defining the league's conservation philosophy in terms of needs: It is the aim of the Izaak Walton League to see our natural resources managed to serve as many legitimate needs of as many people over as long a period of time as intelligence, foresight, and a sense of responsibility to the future will permit.

And we are certain that there are ways to make certain that our water resource serves all our needs reasonably well if we can apply the conservation philosophy to its management.

There is urgent need for applying the conservation philosophy to watershed management; to water law; to pollution law and its enforcement; to research. But philosophies are not applied unless they are understood and accepted. And there is serious public confusion today about what to hope for from pollution abatement efforts, growing out of a misapplication of the multiple-use idea.

There is a persistent trend in the sanitary engineering profession among both industrial and domestic waste treatment groups to talk about the wisdom of maximum use of surface waters for carrying off wastes.

The argument begins with the statement that waste assimilation is a beneficial use of water; true conservation is maximum use for each beneficial purpose; therefore true conservation requires that we dump as much waste into our waters as they can handle without unreasonable impairment of other values.

The first flaw in this maximum multiple-use idea is fatal as far as water quality is concerned. It's true that getting its wastes disposed of is beneficial to society. But the surface waters used to assimilate wastes most assuredly are not benefited; and these waters must serve a far greater range of human needs than can be met by water loaded to what the pollution sources would be likely to consider a practical maximum.

It must be remembered that the same stream this pollution philosophy would sacrifice to maximum pollution loads may, under ideal conditions, provide a cooling draught to a thirsty farmer. It may provide a place for families to swim and wade, or a nesting or resting place for waterfowl.

If it serves a major industrial area it might do well to support a sport fishery for the thousands who live near it, and bear water skiers, sailboats, and other craft in numbers. And it may, if it is pleasant to the eye and the nose, bring charm to an otherwise drab city park.

Certainly it must provide water to drink and to bathe in (after appropirate treatment), and water to grow and fashion the products that feed and clothe and house and transport and amuse and tranquilize us.

In no case is the capacity of water to meet human needs increased by its use for waste disposal.[1] On the contrary, its capacity to serve most human needs is reduced, and its capacity to serve others may be destroyed, by its use for waste assimilation.

And it follows that the best possible use of water for waste assimilation is the least possible use; and that the theory of "maximum use" of water for waste treatment can be applied only at the expense of other legitimate needs.

The conservation philosophy insists that pollution be minimized first by efficient use of resources used in manufacture, including reuse of some materials and manufacture of byproducts from others.

Efficient treatment of the remaining wastes is the second step, with the effluent released to surface waters only after the best possible treatment.

The maximum use theory, if universally accepted, would guarantee perpetual pollution of all water receiving significant uses.

There would be no point in the theory if its advocates didn't object to the burden of treating pollution to a point that would be acceptable to other interests—to recreation interests, to cite an obvious example.

No, there can be little doubt that the range of human needs above that level of water quality which might best be described as usable filth would be found expendable under the maximum use idea.

The maximum use theory is also questionable from a standpoint of sheer practicality. It is unworkable.

The uses of surface waters change every day. New suburbs boom. New citizens are born. New processes are found. New chemicals are used. All change the amount and kind of pollution load. The receiving surface waters change, too. Flows vary from day to day, season to season, year to year. Start on any given day with a maximum load; the next day the load will exceed yesterday's neatly computed maximum.

The league has said, and repeats, that the challenge is not to see how much pollution we can dump in a stream. The challenge is to see how much we can get out of it—to provide for today's needs, to provide a margin for meeting tomorrow's.

That is the heart of the conservation philosophy.

[1] Sanitary engineers can point to cases where enrichment from organic wastes, for instance, may increase fish production. Within the context of current pollution controversy, however, the statement is valid.

American Students Abroad

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. ANFUSO. Mr. Speaker, I should like to call the attention of the House to a charming and illuminating little book, "From Main Street to the Left Bank," by John A. Garraty and Walter Adams, published last December by the Michigan State University Press. The authors discuss the cultural exchange programs of American universities in Europe, and comment on the effectiveness of our academic ambassadors in communicating a favorable image of America. As a member of the House Space Committee, I was particularly interested in the comparison of the strengths and weaknesses in the American and European educational systems.

Dr. Garraty, professor of history at Columbia University, is the distinguished biographer of "Silas Wright," "Henry Cabot Lodge," and "Woodrow Wilson," as well as the author of "The Nature of Biography." Dr. Adams, professor of economics at Michigan State University, has been a member of Attorney General Brownell's National Committee to Study the Antitrust Laws and a frequent consultant to congressional committees. His books include "The Structure of American Industry" and "Monopoly in America." The publisher of "From Mainstreet to the Left Bank" is the Michigan State University Press which, under the able direction of Mr. Lyle Blair, has achieved international note and distinction.

The following review which appeared in the New York Times on November 29, 1959, was written by Mr. Fred M. Hechinger, the Times' education editor:

THE YEAR ABROAD

(By Fred M. Hechinger)

One of the most generally accepted, though untested, theories is that any young man or young woman will learn a great deal, if given a passage to Europe and let loose to study there. The theory is no longer untested. Two academic men, with a foundation grant to boot, have tested it. As with so many educational theories, this one did not survive the test unscathed.

John A. Garrity, professor of history at Columbia, and Walter Adams, professor of economics at Michigan State University, survey the subject of American students abroad. They look at it, not wide-eyed but openminded. They don't feel obligated, as so many educators apparently do, to make foreign study a sacred cow that is desecrated by frank criticism. This book is frank and critical. It is also good reading for anyone who has the best interests of foreign studies at heart.

An important contribution of the book is its forthright discussion of differences between an American campus and European student life, both social and academic. It avoids hero-worshipping the academic pretensions of some of the European professors who look on students as a necessary evil. But it also has some caustic things to say about the unnecessary coddling of American students.

The problem is clearly one of quality, and quality in matters of the mind is not easily or automatically found anywhere—not in the United States and not in Europe either. The description of some special courses offered even by such noted institutions as the Sorbonne for the benefit of American students show up serious intellectual shoddiness. Not all foreign study is good, any more than all travel is broadening. It depends on the student as much as on the traveler.

The same can be said of the special programs, such as Junior Year Abroad, which have become part of the offering of many American colleges. Some are well adminis-

tered and well planned; others leave much to be desired. The authors have the courage, rare in academic circles, to be specific. They point out what they consider strengths and weaknesses of programs offered. They criticize freely the frequent lack of permanent leadership of some programs and charge that some colleges may refrain from appointing permanent directors for their foreign studies in order to spread the benefit of junketing. They say programs and students suffer as a result.

None of these criticisms should create the impression that this book is opposed to study abroad. On the contrary, it wants more of it; but it also wants the effort put to the best possible use. It does not have much faith in benefits "by osmosis" and would therefore prefer to have more of the stress placed on well-planned, demanding academic programs, whether at home or abroad.

At times, the authors may be a little too harsh. They may give too much credit to academic effort and too little to the power of enthusiasm. But, since most observers err in the opposite direction, this may be a good thing. And when they point to the importance of really thorough language instruction, as a prerequisite to full benefits from study in foreign countries, they are on firm ground.

For the student who plans to go abroad, there are some important hints. Should he live with a European family or in a student dormitory? Is it better to travel in groups or independently? There are no pat answers, but there are such sensible answers as the fact that some groups are "herds" and some individuals turn out to be lost and lonely. As for families, the fact that they are European does not make them automatically exciting, as documented by the lady of the house who insisted on keeping television turned on and conversation turned off during meals. The authors, however, have a tendency to be too categorical—e.g., when they put a shabby label on most of the European "bourgoisie."

As for the often unrealistic and even more often ignored rules that govern American students' social behavior, they probably put their finger on the real reason for their perpetuation: without them, American parents would not let their offspring go to Europe at all.

For those who are offended by the critical aspects of the book—admittedly a little harsh and not always "diplomatic"—there are the highly reassuring reactions on the part of serious students. "You have to defend what you believe in," says one young American, and this revelation is bound to make him a better person, a better American and probably a better scholar. "I can never be a co-ed again," says a young woman, and this is a sigh of liberation rather than of lament.

After the wounds that will be left here and there have healed, the effect of this book should be to strengthen rather than to weaken foreign studies, and the institutions engaged in them. The authors have decided that a little bloodletting will do more good than a pleasant bedside manner.

Where Do We Stand?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Outdoor America for January 1960:

WHERE DO WE STAND

Are current municipal and industrial waste treatment efforts keeping pace with increases in pollution loads? Here are pertinent comments by two top Federal officials:

Arthur S. Flemming, Secretary of Health, Education, and Welfare, testifying before the House Committee on Public Works on April 8, 1959, on the Blatnik bill (H.R. 3610):

"Surely we can all agree on the increasing importance of water in our national life and economy. This matter of water, without question, is about to become, indeed if it is not already, a critically urgent national problem. During the period 1950 to 1957, while our population increased 12½ percent, the total fresh water used increased 57 percent. Where we now use 270 billion gallons of water per day, by 1980 we will need 600 billion gallons per day—more than double our present requirements. These figures illustrate our great dependence on surface streams for public water supply, for production of the things we eat and wear and use. At the same time we need to keep in mind the irreplaceable value of these waters for recreation and conservation of fish and wildlife.

"As I see it, we don't stand a chance of meeting these accelerating requirements unless we make marked progress in the direction of cleaning up our streams and keeping them clean. For 40 years we have been dumping more pollution into the surface waters of the Nation than we have been removing through waste treatment.

"Such a situation calls for a concerted attack on the part of the Federal, State, and local governments, and private groups."

Gordon McCallum, Chief, Division of Water Supply and Pollution Control, U.S. Public Health Service, Department of Health, Education and Welfare, in response to a request for comment by the Izaak Walton League:

"Despite marked progress since Congress passed the Water Pollution Control Act of 1956, we are losing ground in the battle for clean water.

"Some 3,000 communities still discharge raw domestic wastes into streams. Another 2,800 need improvements on existing sewage treatment plans. Although municipal sewage treatment works construction rose from $222 million per year in 1952–56, preceding Federal construction grants, to almost $400 million per year in 1959, cities must spend $575 million each of the next 5 to 8 years to catch up. Consequently, we are falling behind at a construction rate of over $175 million per year.

"While there is no accurate index of total industrial waste pollution or waste treatment facilities, industry's outlay of funds must be comparable to that of cities during the next few years."

Congress Should Express Its Indignation at Desecration of Places of Worship

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. BRADEMAS. Mr. Speaker, it was with shock and dismay that I and many other Americans have read during recent weeks of the anti-Semitic and anti-Catholic demonstrations in Western Europe and elsewhere in the world, including the United States.

The poisoned mercury of religious bigotry spreads rapidly and in many directions if left unchecked; its flow is not easy to arrest.

As if to emphasize the blasphemy of their acts, the persons who were responsible for touching off this wave a few weeks ago chose Christmas eve as the time for desecrating a synagogue in the city of Cologne in West Germany.

Mr. Speaker, those who say that anti-Semitism is dead and that the deeds of the Nazis should be passed by on the other side speak too soon. "Even when it is shameful and frightening," said Commonweal magazine recently, "history cannot be denied. That 5 million Jews were murdered by the government of a highly cultured European Christian people is a monstrous, hideous fact, for them and for the rest of the world. That nazism is quite dead becomes every day an increasingly dubious judgment; but, even if it were quite dead, it would still need to be referred to."

THE "HITLERIAN HERITAGE" OF THE ANTI-SEMITES

The January 23, 1960, issue of Ave Maria, a fine Catholic weekly published at Notre Dame, Ind., comments in similar vein:

Have we forgotten * * * the horror of Germany under Hitler, the murder of countless Jewish—and Christian—men, women, and children who were innocent of any crime? Hitler did not create anti-Jewish feeling; he merely systematically cultivated it and fanned it into a white heat of hatred which allowed him to perpetrate his crime against humanity in the name of justice. * * * When the parlor bigots today sit around and make their anti-Semitic remarks, do they not realize their Hitlerian heritage?

Mr. Speaker, because I feel so deeply the dangers of such acts of desecration of places of worship, I have today introduced a House concurrent resolution by means of which the Congress of the United States can express to the world its profound sense of indignation and shock at this epidemic and can call on all peoples and all governments everywhere to work to the end that these shameful events shall not happen again.

CONGRESSIONAL RESOLUTION EXPRESSING SHOCK AT DESECRATION OF PLACES OF WORSHIP

The text of the resolution follows:

Whereas in recent days there has been a wave of desecration of places of worship and other sacred sites; and

Whereas this desecration has been spreading throughout the nations of Europe and other parts of the world; and

Whereas instances of desecration have occurred in this country recently; and

Whereas if left unchecked this wave can only result in grievous moral deterioration and denial of the true spirit of the brotherhood of man; and

Whereas the conscience of the world has been shocked by these events: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses its profound sense of indignation and shock at this epidemic of desecration and calls upon all persons and governments throughout the world to exert their energies to the end that these shameful events shall not recur.

THE HIGH COST OF PREJUDICE

Mr. Speaker, we know from the turbulent history of our national experience in the United States the high cost of racial and religious prejudice.

We can see very clearly how the intolerance that burst forth with the desecration of a synagogue in Cologne soon spread to other West German communities; then to Vienna, London, Glasgow and finally to our own country, in New York City.

LEADERSHIP OF NATIONAL CONFERENCE OF CHRISTIANS AND JEWS

The month of February, Mr. Speaker, is the month during which the people of America celebrate Brotherhood Week. I am proud of the fact that in recognition of this week, the citizens of South Bend, Ind., as well as of other communities of the Nation, operating through the agency of the National Conference of Christians and Jews, have taken the leadership in combatting religious intolerance. I hope that, precisely because of the unhappy events that have taken place during recent weeks, every American community will this month dedicate itself to the erasing of religious hatred and ill will among Americans of different creeds.

For we all know that when one man or one house of worship or one religious faith is today made the object of attack, tomorrow another may feel the sharp lash of bigotry.

NO MAN IS AN ISLAND—ASK NOT FOR WHOM THE BELL TOLLS

No man is an island, entire of itself—

Said John Donne—

Every man is a piece of the continent, a part of the main; if a clod be washed away by the sea, Europe is the less as well as if a promontory were, as well as if a manor of thy friends or if thine own were; any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee.

Fine Progress of Democracy in Israel

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. FULTON. Mr. Speaker, I rise to extend my congratulations to the people of the State of Israel on their approaching 12th anniversary of statehood and independence. Their history and culture go far beyond this short period, as do the histories and cultures of many of the states who have or soon will achieve independence.

The State of Israel recently held its fourth election, a model election for new democracies. It was an election which was, in many ways, similar to our own. Under leave to extend my remarks in the RECORD, I am calling to the attention of my colleagues and the people of our good country, a report on these elections, which shows the fine progress of democracy in Israel. The report was written by Richard C. Scammon, elections research director of the Governmental Affairs Institute, and a known authority on elections.

The report follows:

[From the America-Israel Bulletin]

ELECTION DAY, ISRAEL

(By Richard M. Scammon)

As the voters stood in line a few weeks ago for Israel's fourth postwar election an American observer could easily think he was right back home in the third ward. The moving line of chatting voters, the schoolhouse, the officials, ready to check off a name—it all looked very, very familiar. And familiar indeed it was, for democracy speaks in the same voice whether it be Haifa or Houston.

But there are differences, of course. Election day in Israel isn't exactly the same as in America, or Italy, or India. For one thing Israeli citizens vote only once every 4 years. National parliamentary elections (to choose members of Israel's Knesset) and local council municipal elections are held on the same day. This way all the campaign speeches—and the expense of elections, too—are concentrated on a single election day once every 4 years.

For another, Israeli elections are party elections rather than personality contests. The voter makes his choice among a number of competing party tickets for the national Knesset and his local municipal council. Naturally, a national personality like Ben-Gurion or Menahem Begin, leader of the Heruth Party, may persuade a man to vote for this or that party, but it is the party for whom the voter finally casts his ballot, not the individual candidate.

Campaign persuasion in Israel isn't too much different from what we know of campaigning in America. There isn't any television yet, but the state radio carries all the leading party speeches and the newspapers and billboards are filled with campaign appeals. The Israelis are a reading people, and the parties do a lot of work distributing patry handouts and party papers. Since as many as a quarter or a third of all Israelis are party members, there are plenty of men and women to do the distributing job.

But all the campaigning must stop on election eve. At 7 in the evening, 12 hours before the polls open, the official campaign comes to a close. But this doesn't mean the party workers are finished. Far from it. On election day they are busy with unofficial work—manning the precincts, handing out sample ballots and getting voters to the polls. Since all the precinct election judges are nominated by the parties, many thousands of party workers are counting ballots on election day, just as their fellow party members are out rounding up votes.

NOBODY IS CASUAL

Election day is officially a holiday in Israel, but in some parts of the country the workload seems greater than on any ordinary working day. For example, in one kibbutz over half the adults were involved in the election—as judges, as watchers, as party workers. The kibbutz members fanned out in all directions from their home base, this group being judges in one town, another being watchers at an area up the road, still others mobilizing their party supporters in a third village.

And the Israelis take their duties seriously. Since election day comes only once every 4 years no one is casual about the "coronation day" of democracy. For people who vote two or three times every year the whole process may get boring—but not in Israel. It doesn't come often enough to jade people's appetites especially a people as involved and interested in politics as are the Israelis.

A few of the ultra-orthodox refuse to vote at all, disclaiming any interest in Israel as a State. But this is a small minority—most join enthusiastically in the campaign for votes and in the election which settles the campaign. In fact, they join in so vigorously that some problems are created by zealousness. One minor problem is in the taxi business. All taxis are rented by the parties for election day, and pity the poor traveler who wants to hail a cab.

FOREIGNERS HAVE PROBLEMS

Another problem—this one for foreigners—is created by Israel's unique franchise law. Only citizens may vote for the Knesset, but all residents may vote for their local municipal council. The reasoning behind this is sound enough—you ought to be a citizen before choosing the country's lawmakers, but everybody shares an interest in municipal garbage collecting. Thus foreigners, if they be residents of an Israeli community, have the right to vote in local elections.

This is no difficulty for some. Swiss, for example, or British, may vote at their pleasure in local elections. But for Americans it is different. For an American to vote abroad—even in a local election in a friendly country which wants him to vote—means potential loss of citzenship. All day long on election day the telephone kept ringing in our Embassy in Tel-Aviv. Israeli party workers were anxious to get out the vote. Americans couldn't vote for the Knesset, of course, but why not for the town council? Often it it was only with difficulty that explanations could be made, so zealously were the party workers ringing doorbells and rounding up the voters.

This enthusiasm for getting out the vote may be seen in the services, too. Israeli troops may vote at their homes if they wish. But they can vote right at their army posts, too. Only one time, of course—and identity cards are punched to prevent any double-voting. But every effort is made to get service men and women to the polls. One interesting aspect of service voting is this: no one over the rank of sergeant can sit as an election judge. It is believed the rank-and-file might be a bit intimidated by having to face up to an election board composed of officers. So sergeant is the top rank. Actually many of the service voting places are staffed by young women, many of them just barely old enough to vote themselves.

The parties go after this service vote as they do the civilian vote: precincts stay open longer than ours. In fact, you can vote right up to midnight, though actually not many people do in the last hour or two. But no one wants to feel any potential voter has been denied the franchise, so voting goes on right up to the literal end of the day. And it goes on for all Israeli citizens—Jew, Arab, Druse, Bedouin, whoever they may be. Everyone has his secret "moment of truth" in the privacy of the polling booth. There he is the master, in Israel as in America. The secret ballot in a free election is the greatest bond of unity for democratic nations everywhere.

Address by Former Governor McKeldin at Annual Dinner of the German Society of Maryland

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. FRIEDEL. Mr. Speaker, it is because it is peculiarly applicable to the happenings in today's world that I am

impelled to call to the attention of my colleagues in the Congress an eloquent address delivered on January 18, 1960, by the former Governor of Maryland, the Honorable Theodore Roosevelt McKeldin, who has returned to the private practice of the law. This brilliant speech was made on the occasion of the annual dinner of the German Society of Maryland.

It was altogether fitting and proper that Governor McKeldin, in that address, called our attention to the great and lasting contributions of Germany in every field of human endeavor. Science, philosophy, music, and every aspect of learning have been enriched by Germans. It is important for us to remember these things in the light of recent incidents occurring throughout the world.

The State of Maryland is justly proud of its citizens who are the officers and members of the German society and I am happy to number so many of them as my valued friends. Mr. Francis W. Pramschufer, Sr., its president, and Mr. Herbert F. Kuenne, vice president, have done so much to make the society a force for civic good. Present at the dinner were some of Baltimore's truly outstanding clergymen, such as Rev. Dr. Gottlieb Siegenthaler, Pastor Fritz O. Evers, and the Reverend E. F. Engelbert. Also present was Baltimore's young and able mayor, J. Harold Grady.

Governor McKeldin's remarks on that occasion were as follows:

ADDRESS OF THEODORE R. MCKELDIN, GERMAN SOCIETY OF MARYLAND ANNUAL DINNER, JANUARY 18, 1960

In the year 1960 the German Society of Maryland has been given a new and increased importance by its enemies. For this society certainly counts as its enemies all persons whose acts tend to bring discredit on the German name, and in recent weeks a number of incidents have had that effect. This means that it is more than ever necessary that people who represent the great Germany shall make their voices heard.

For it is an unfortunate trait of human nature in all countries to be startled by bad news and to take good news as a matter of course. When we hear that juvenile delinquents have painted swastikas on German synagogues, we are likely to forget that it was this same country that produced and educated Albert Einstein; and it is just such forgetfulness that accounts for a great deal of the pessimism of our times.

It is the function of our organization to counteract this tendency and in the present state of the world that function is much more than merely the occasion for social gatherings. The preservation and enrichment of German cultural values is of such vast importance to the United States that it cannot be overestimated. Without the music, the literature, the philosophy, and the science that Germany has contributed, our culture would be so much poorer that it does not bear contemplation.

Yet in stressful times it is inevitable that these things should fade from memory unless wise men and women continually emphasize them, losing no opportunity to speak of them in the midst of the turmoil. Nor does this apply to Germany alone. The American people, a composite of all nations, should be more careful than any other never to allow recently developed tensions to make them forget what they owe to others.

I do not hesitate to apply it even to those countries with which we are at the moment most definitely at odds. Our dislike and distrust of the Soviet regimes in Russia and China, however amply justified, must not be allowed to blind us to the true greatness of both nations. Our indignation with Khrushchev ought to be based very largely on the fact that he is not only hostile to us, but also hostile to the spirit of Tolstoi, and Tchaikovsky, and Pavlov; and Chinese Mao defies not us alone, but Confucius, also, and all the artists and poets and sages who created Chinese civilization.

In the presence of the German Society of Maryland, therefore, it is more than a pleasure, it is a civic duty to extol those men who without ever leaving German soil have helped to make America great. How much of our freedom of worship we owe to Martin Luther is too obvious to need comment; but you have only to look into the correspondence of those two definitely non-German Americans, John Adams and Thomas Jefferson, to discover how much those great political thinkers owed to the tempering and sharpening of their minds by the work of Leibnitz; and their immediate successors owed as great a debt to Immanuel Kant.

Here in Baltimore we are well aware that one of the chief ornaments and distinctions of our city, the Johns Hopkins University, was consciously designed upon the German model; and the most eminent of the group of great scholars who set the tone of the institution were almost without exception educated in part in Germany. From that day to this, German scholarship has strongly influenced the work of the university, and at this moment it is administered by a member of one of the most distinguished American families of German descent.

It is trite and hackneyed almost to the point of absurdity to speak of the influence on American life of the German masters of music. After all, Americans live in the Western Hemisphere, and the whole occidental world acknowledges musical allegiance to Bach, Beethoven and Brahms.

But precisely because music, the universal language, needs no translation we can perceive the Germanic influence on that art much more easily than its corresponding influence on literature, where the language barrier intervenes, but it is important to remember that that most typically American poet, Longfellow, took great pride in his ability to read German. In his day it was as extraordinary an accomplishment as it is today for an American to read Turkish; and through Longfellow, Goethe, and Schiller, and Heine had already influenced American literature years before the troubles of 1848 sent the first great wave of German immigration to our shores.

It is a fair claim, therefore, that the writing done in the colonial period is the only part of American literature that is not distinctly influenced by the great Germans; and I do not think that any scholar will claim seriously that the writing done in the colonial period represents the highest achievement of American literature.

It is evident, therefore, that in its political theory, in its scholarship, in its science, and in its artistic activity American culture has always drawn heavily upon the German. It is this that we should remember in such times of troubles as the world is going through at present. To a very large extent we are all German and not only those of us who trace their ancestry back to that country. Intellectually and esthetically any man who is thoroughly American is somewhat German, although he may not have a drop of German blood; for our manner of thinking we owe in part to that nation.

It behooves us then to be of all nations the most tolerant and the sympathetic to others who are going wih us through a time of troubles. American wealth, American military power, and American political influence are not the only reasons why it is appropriate that the headquarters of the United Nations should be located on American soil. There is also the immensely important fact that the American intellectual and moral heritage includes something drawn from almost every nation upon the globe. Hence the American mind ought to be the most broadly understanding in the world.

But it will not be if we concentrate our thoughts on those things that separate us, rather than on those that unite us. If we fall into that error, our understanding, far from being broad, will become the narrowest in the world; and if we allow that calamity to overtake us, we shall be the country not most, but least fitted to lead the world toward an enduring peace.

Hence I maintain that this society, to the extent that it emphasizes the precious part of our inheritance from Germany is doing far more than merely stimulating amiable social contacts. It is working toward the easing of tensions and the softening of irritations. It is working against hatred and spite and prejudice. That is more than goodfellowship. That is public service, to America, to Germany, and to the world. It deserves the warm approval of Americans, whether of German blood or not.

It is just 3 weeks since we all joined happily in exalting the most beloved German immigrant ever naturalized in the United States. I refer, of course, to Santa Claus. I claim that he is a naturalized American because, although he was born in Germany, it was an American—he who wrote, "'Twas the Night Before Christmas"—who gave him his sleigh, his reindeer, and his ability to defy the law of gravity. It is only in America that—

"As dry leaves that before the wild hurricane fly,
When they meet with an obstacle, mount to the sky,
So up to the housetop the coursers they flew,
With the sleigh full of toys, and St. Nicholas too."

So I maintain that, regardless of his place of birth, he is today, just as much a citizen of this Republic as was George Washington himself.

But what an immigrant. What a gift from Germany to be adapted to American life—this embodiment of laughter and tenderness, of comedy and love, this banisher for even one day of wrath and hatred, this establisher for a few hours of merriment and kindness as the ruling spirits of the land. Santa Claus is above all the patron saint of childhood, and I heartily claim him as a citizen of the country that I firmly believe to be the Promised Land of childhood in the sense that its supreme greatness has not yet been achieved, but is reserved for those who are children now.

He came to us from Germany and for that every American, of whatever blood, must call down blessings on the name of Germany.

My own ancestors were Scottish on my father's side, and I confess no small pride in the contribution that Scotland has made to America, but I am bound to admit that with all it has given, Scotland never sent a gift like this. It was the ancestors of Germany, represented by your fathers and mothers and by my mother, whose name was Dorothea Greif and whose mother's name was Cunigunda Vinzel, that made this great contribution to America, which represents our best symbol of joy in innocence, of kindness, of cheer, and of hope.

Appendix

A Charter of Independence for Senior Citizens

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. HILL. Mr. President, the diligent senior Senator from West Virginia [Mr. RANDOLPH] has developed and presented a challenging program which he has entitled, "A Charter of Independence for Senior Citizens."

Our able colleague, whose record of interest and accomplishment in the field of social legislation and public service dates back a quarter of a century to the days when we were privileged to serve together in the U.S. House of Representatives, has set forth his eloquent and sincere views concerning the needs of our older citizens in a speech delivered at the West Virginia Institute on Vocational Rehabilitation of the Aging, January 25, 1960, at Institute, W. Va.

Senator RANDOLPH, as a Representative, was active and forthright in his support of the great social security program at the time of its enactment. He has consistently worked for its improvement and for many other movements and programs intended to provide aid and comfort for the blind and other handicapped persons.

During the last session he was a leader in this body in the passage of the Youth Conservation Corps measure which embraces certain features of the popular CCC program which we both supported with vigor during the early period of the Franklin D. Roosevelt New Deal era. It was my privilege, as chairman of the Senate Committee on Labor and Public Welfare, to have appointed the senior Senator from West Virginia to serve as chairman of the subcommittee which held hearings and prepared the majority report on the Youth Conservation Corps bill.

Knowing of our colleague's abiding interest in and sterling qualifications to perform real service in connection with studies of problems of our senior citizens, as well as our youth, I likewise was privileged to appoint him to membership on the Subcommittee on Problems of the Aged and Aging.

Senator RANDOLPH, as a member of the latter subcommittee, devoted his time to hearings during the latter part of 1959 across the country and presided over those hearings held by the subcommittee for West Virginia at Charleston. His speech before the West Virginia Institute on Vocational Rehabilitation of the Aging is particularly appropriate, and I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A CHARTER OF INDEPENDENCE FOR SENIOR CITIZENS

Ray Power, fellow West Virginians, and guests, the questions which you are confronting during this conference are aspects of one of the fundamental problems of modern American civilization. It is a problem which no society in history has ever before faced in such magnitude.

During the recent recess of Congress, I participated, as a member of the Senate Subcommittee on Problems of the Aged and Aging, in hearings conducted in representative cities throughout the Nation. Our subcommittee held hearings in Washington, Boston, Pittsburgh, Miami, San Francisco, Detroit, Grand Rapids, and Charleston, W. Va. I took part in all but those held in Pittsburgh and Michigan, and I presided over those in our State.

We received the scholarly and scientific testimony of the experts, and we received the often heart-wrenching and pathos-laden reports from the elderly folk themselves. This evening I share with you some of the findings of our subcommittee and some of my own observations drawn from these hearings.

But, first, let me sketch in the briefest detail the national scope of what my friend and colleague, Senator PAT MCNAMARA, has called the quiet revolution.

APPROXIMATELY 16 MILLION CITIZENS OVER 65 YEARS OLD

Perhaps these figures are well known to many of you, but we cannot emphasize them too frequently. In 1900 there were only 3 million Americans aged 65 or over, contrasted with approximately 16 million today, 5 million of whom are 75 or over. These 16 million, within the next decade, will swell to 20 million, of whom 7 million will be 75 or over. These figures received a dramatic expression in our Washington hearings when it was stated that of all the persons who have ever reached the age of 65, 25 percent are alive today.

In terms of West Virginia statistics, the total population of the State in 1957 was 1,962,000. Of that total, 164,000 persons were age 65 years or more, and this number constituted 8.3 percent of the West Virginia population.

Between 1950 and 1957, the number of persons 65 years and over increased by 18.7 percent, with only two other States, Mississippi and Arkansas, having experienced the same type of change.

Then, too, in West Virginia persons 45 and over amount to 28 percent of the population. I am told that each month the public employment offices in West Virginia receive an average of 1,200 new applications from older jobseekers.

During the last fiscal year, approximately 15,000 new applications were received from workers over 45 years old, and during that same year 3,710 of them were placed in nonagricultural positions, including almost 2,000 in service jobs—the bulk of them in private households.

Experts on census evaluations point out that in one important way West Virginia's population pattern differs from the normal of the country. Ours is a State predominantly rural. The latest available official census (1950) reveals that 65.4 percent of West Virginia's population was rural, and this is the fifth highest agrarian population—percentagewise—among all the States.

LIFE EXPECTANCY IS INCREASING FOR AMERICANS

A man of 65 may today expect to live another 13 years; a woman of 65 now has a life expectancy of 15½ years, with the average age at death being about 70. But, by the year 2000, it is estimated that the average will be 82; and it was not uncommon during our hearings for experts to testify that with continued progress in medical science, by the end of this century many people may expect to live to be 125.

These are but the bare outlines of the revolution—and this is not too strong a term—taking place in our population pattern. It is a revolution for which we have been inadequately prepared—psychologically, socially, economically, and medically. Although in some of the States genuine advances have been made in the fields of low-rental housing, employment counseling, and medical care, our national treatment of the problems of the aged as a whole has been marked by callous indifference and neglect. While we glorify in our claims of being the richest nation on earth and having achieved the highest standard of living in history, we allow millions of our senior citizens who have contributed so much to our national achievements now to suffer personal isolation and poverty, degraded housing conditions, and pitifully inadequate nutritional standards and medical care.

This condition is essentially the product of a default in our national attitudes and a failure to develop national planning in the light of new knowledge and new perspectives.

First, with reference to our national attitudes: As a comparatively young nation, with a history first of an expanding physical frontier and then expanding technological and economic frontiers, we have customarily placed the accent on youth and vigor and action. We have not, as a culture, given the veneration to age and wisdom and contemplation that these qualities have received in many other more traditional societies.

URBAN SOCIETY ACCENTUATES PROBLEM OF OUR AGED

Also, until the 20th century we were largely a nation of farmers and small townsmen, and the comparatively few elderly people in our society offered little welfare or maintenance problem. Normally, each family took care of its own, and on the farm and in the small town there was a role to be occupied and work to be done by the elderly. But in the urban life of today—in the project house or the three-room efficiency apartment—there is often no place for the elderly.

Thus, as a nation we have looked the other way while millions of our senior citizens have been forced upon the "tundra of neglect"—to use the graphic phrase of Gen. John F. McMahon, commander in chief of the Volunteers of America.

A second basic inadequacy in our perspective of the elderly is the arbitrary assumption that old age begins at 65—and after that the person is ready to be placed upon

the shelf. The arts of modern medicine have long since invalidated this assumption in its general application, and for disproof in particular instances we need only look at the the creative work of such leaders as our two living ex-Presidents, Herbert Hoover and Harry S. Truman; elder statesman Bernard Baruch; world personalities Winston Churchill, Conrad Adenauer, and Eleanor Roosevelt; and great poets Carl Sandburg and Robert Frost—as well as that of some of the vital and active oldsters among my own colleagues in the U.S. Senate.

I am most happy to note the presence tonight of Dr. A. A. Shawkey. He will be "90 years young" next August. Dr. Shawkey has been an active and prominent physician during a fruitful lifetime of service.

Thus, among our 16 million senior citizens today, there is a precious store of skills and abilities, experience and wisdom, which we allow to atrophy through mere neglect and indifference. Not only do we thereby squander a critical national resource, but we also violate the cardinal principle of our own society—that is, the right of each person to a life of dignity and self-respect.

THREE-FIFTHS OF THOSE 65 RECEIVE LESS THAN $1,000

Now, to return to some of the findings of the Senate hearings: according to expert testimony presented to our subcommittee, three-fifth of the persons over 65 received an income of less than $1,000 in 1958, with half of the elderly couples receiving less than $2,000 and about 1½ million widows receiving average social security benefits of $56 a month.

Yet the last budget designed for an elderly couple by the Social Security Administration—and priced at 1950 costs—ranges between $1,600 in New Orleans and a little over $1,900 in Milwaukee. Considering that the general consumer price index has risen approximately 22 percent since that time and medical costs almost 50 percent, it is little wonder that Commissioner William C. Mitchell of the Social Security Administration declared: "* * * The cost of maintaining a healthful, self-respecting mode of living * * * is likely to be more than a sizable proportion of our senior citizens can afford."

The picture was sketched for us in more vivid terms during our hearings by the testimony of scores of elderly people who reported from their own experiences. Too frequently the term "golden years" is surrounded by bitter irony. The composite picture of our senior citizens, rather than being one of the elderly couple living in modest but graceful retirement, is all too often that of lonely men and women, marking off the days in rented rooms, in isolation from the mainstream of community life, eating in cheap cafeterias, and living in anixety under the constant spectre of a major illness which will wipe out whatever savings they may have.

As Dr. Margaret Mead observed during our Boston hearings, in some respects we treat our aged worse than the Eskimos, since they at least allowed the old people themselves to choose death if they had become a burden upon their children and grandchildren.

Throughout our hearings the most crucial area of concern, and the recurrent theme in the testimony of the elderly witnesses was that of health care. For old people spend more on health services than do the young, and this comes at a time when income has been sharply reduced. And I need hardly emphasize to you ladies and gentlemen that physical rehabilitation is the first step toward vocational rehabilitation.

In this respect I was particularly impressed by the testimony of Dr. Jack R. Ewalt, director of the Massachusetts Mental Health Center. Dr. Ewalt cited the National Health Survey which indicates that of the people aged 65 or over covered by the survey, 78 percent had some chronic illness. But, Dr. Ewalt points out, when one examines the figures on chronic illness more closely, one finds that in spite of chronic disorders only 14 percent of the older patients were unable to carry on major activity. Thirty-five percent were in no way limited in activity, an additional 8 percent not limited in any major activity, while 20 percent were in truth limited in the amount and kind of major activity they could carry on. Eighteen percent of the older people could not get around alone.

"Thus, at least 80 percent of older people insofar as their general physical and mental health is concerned, can carry on some type of useful activity."

OLDER FOLK ARE CAPABLE OF USEFUL EFFORT

This then should be the minimum goal of rehabilitation at every level of governmental activity—to assure that at least this 80 percent has the opportunity for independence and the self-respect of engaging in some constructive and useful activity.

It was pointed out also by Dr. Ewalt and other medical experts that many of the mental disorders associated with senility are more an expression of social, psychological, and economic pressures upon a person with lowered brain reserve than they are due to any change in the structure of the brain itself. Therefore, with adequate assessment and rehabilitative programs, many of the aged now simply vegetating in our institutions could be helped to rejoin the active currents of community life.

In addition, there are approximately 450,000 aged in institutions which are loosely classified as nursing homes. Yet, a study indicated that 60 percent of the homes have no registered professional nurse, and one-third have neither a registered nurse nor a licensed practical nurse. Many, if not the majority, of the patients would not need to be institutionalized if we had adequate low-rental housing planned specifically for the aged.

But to achieve our goals—to give every man and woman the will and the opportunity to use what is usable—to assure our senior citizens the right to spend their remaining years in pride and dignity rather than pity and degradation—we must take inventory now. This is not a casual situation which we may face in the luxury of our leisure, for millions of those most directly affected will not be here 5 or 10 years from now. And increasing numbers in the near future will be facing the same problems.

FOUR POINTS ARE STRESSED FOR SENIOR CITIZENS

To meet these problems, I have developed a charter of independence for senior citizens.

First, to assure such independence, hospital and medical insurance must be placed within the reach of the nonindigent aged; and social security and old-age assistance payments must be raised to a realistic level which will make possible a decent minimum standard of living.

Second, we can no longer postpone the creation and expansion of health centers dedicated to providing up-to-date restorative services for the aged who are chronically ill. Nor can we delay further the upgrading of the quality of care in nursing homes for those aged persons who definitely cannot be rehabilitated.

Third, my experience during the past several months as a member of the Senate Subcommittee on Problems of the Aged and Aging has convinced me that there are literally hundreds of thousands of older citizens who really do not belong in the institutions in which they now live. The establishment of extensive home medical care and homemaker services for such men and women is called for, as another step toward the independence of our senior Americans.

Fourth, because independence requires decent living arrangements and opportunities for meaningful activities, the elderly have every right to a greatly expanded program of low-rental housing, the establishment of community centers, and the provision of such services as counseling and adult education.

Certainly these are the minimal goals which must be realized by concerted and coordinated efforts at the local, State, and Federal levels. Needless to say, the realization of these goals will not be achieved without considerable financial outlay. But as the richest Nation in the world we cannot afford to do less.

It is worth remarking, that during recent years we have been consistently decreasing the proportion of our national income being devoted to all welfare purposes, including the aged. As Dr. Seymour Harris of the department of economics of Harvard University pointed out, "* * * despite a rise of gross national product of $124 billion in the last 6 years: that is, from 1950–51 to 1956–57, the rise in welfare expenditures by the Federal Government, exclusive of insurance was only $1.5 billion, or a little more than 1 percent." And as Dr. Harris later remarked, "The Federal Government now seems to have a horror of getting into debt, but no horror at all of getting everybody else into debt. The net result, therefore, is that State and local governments which have much more serious financial problems than Federal Government are asked by the President, for example, in his budget address of 1960, to assume a larger part of the burden of * * * taking care of the old."

NOT IN AGREEMENT WITH NARROW CONSUMER CONCEPT

This record is perfectly consistent with the aims of this administration as expressed by the Chairman of the President's Council of Economic Advisers last year when he stated "As I understand an economy its ultimate purpose is to produce more consumer goods. This is the object of everything we are working at: to produce things for consumers."

Ladies and gentlemen, this is, I suggest a shockingly gross and materialistic conception of our national destiny. If this is truly the aim—merely to produce and consume things—if this is the aim of the Nation which produced Jefferson and Lincoln, then we are already truly lost.

But I will not accept this low estimate of American aspirations. I believe our national destiny is more than this. I believe it is to continue to maintain and extend the ideals of human dignity, self-respect, and self-fulfillment for every individual. As these values bear upon the theme of this conference, I conclude by quoting an injunction left us by one with a somewhat higher vision of life than that of the bookkeepers of this administration.

In the words of John Galsworthy: "Restoration is at least as much a matter of spirit as of body, and must have as its central truth, body and spirit are inextricably conjoined. To heal the one without the other is impossible. If a man's mind, courage, and interest be enlisted in the cause of his own salvation, healing goes on apace; the sufferer is remade; if not, no mere surgical wonders, no careful nursing, will avail to make a man of him again. Therefore, I would say, from the moment he enters the hospital, look after his mind and his will; give him food; nourish him in subtle ways; increase that nourishment as his strength increases. Give him interest in his future. Light a star for him to fix his eyes on, so that when he steps out of the hospital, you shall not have to begin to train one who, for months,

perhaps years, has been living mindless and will-less, the life of a half-dead creature.

"A niche of usefulness and self-respect exists for every man, however handicapped, but that niche must be found for him. To carry the process of restoration to a point short of this is to leave the cathedral without a spire. To restore him, and with him the future of our countries, that is the sacred work."

One Step Toward the Elimination of the Hazards of Highway Driving

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. RHODES of Arizona. Mr. Speaker, in March of last year I introduced a bill, H.R. 5436, to provide for a register in the Department of Commerce in which shall be listed the names of persons refused a motor vehicle operator's license or who have had such licenses revoked. Since that time there have been more than 30,000 people killed on American highways. Property damage in the same period has run well over a billion dollars. Some of those accidents would not have occurred if the drivers involved in them had been refused driver's licenses on the basis of their previous driving records.

In October 1959, an oil truck crashed into the rear of a bus load of college students near North Brunswick, N.J., killing 11 students and a professor and injuring 19 others. The driver of that truck had previously been convicted of eight moving traffic violations in three States.

In December 1959, a cattle truck smashed head-on into a Greyhound bus near Tucson, Ariz., killing nine people. I am informed that the driver of that truck had a half dozen or more traffic convictions in another State.

Mr. Speaker, no legislation can eliminate the hazards of highway driving, and my bill provides only one step. It would give us the means through which the States could limit the worst offenders. In cases like those I have cited, the drivers would not have had driver's licenses if refused or revoked by the States in which their previous offenses occurred. A Federal register would enable other States to know of such offenders, and also refuse them licenses.

In another case which happened several years ago a driver would almost certainly have been denied a driver's license if the bill I have introduced had been in effect. A truck collided head-on with a car in Washington, N.J., in 1953, killing five adults and five children. The driver of the truck, who was passing another truck on a hill, was driving with a Pennsylvania driver's license after his New Jersey license had been suspended.

I want to commend and thank the gentleman from Alabama [Mr. ROBERTS] and his Subcommittee on Health and Safety for their active interest in this and other safety legislation. No one could be more keenly aware of the situation nor sincerely concerned with doing something about it than the chairman of this subcommittee.

I hope my good colleague from Alabama will be successful in his efforts for constructive legislation on this subject in this session of the Congress.

Mr. Speaker, I urge every Member to study the measure I have proposed, H.R. 5436, and give it his support.

Speech Delivered by Hon. Barry Goldwater, of Arizona, Before the American National Cattlemen's Association

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech I made at Dallas, Tex., on January 29 before the American National Cattlemen's Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH DELIVERED BY U.S. SENATOR BARRY GOLDWATER BEFORE AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION, DALLAS, TEX., JANUARY 29, 1960

It is a real privilege to appear before a group of Americans who have steadfastly maintained their independence and who have resolutely refused to barter away their economic freedom.

In this age of subsidy and supports and special privilege it is a refreshing and encouraging experience to visit with men and women who have never been taken in by that beguiling promise of something for nothing—which is the universal bait employed to secure citizen consent for Federal intervention.

For 30 years we have experimented with farm programs. Supports and controls and subsidies now extend to 30 percent of our farm product and after 30 years of failure we are still experimenting.

And what have we accomplished by this 30 years of failure.

We have succeeded in making the farmer the whipping boy of our economy.

We have assessed direct and indirect penalties against the people of America—cattlemen who buy grain are forced to pay an artificial price, cotton mills must buy their raw material in an administrated market, and we have deprived the general public from the benefits which should be theirs—of our improving farm technology.

Oh, and one more thing, we have compelled the taxpayer to foot the bill for political folly.

Perhaps more damaging than all of these—we have, in some measure, created a dependent society.

We are maintaining a herd of boarder cows at public expense.

And let me emphasive here and now that the farmers are the victims and not the creators of our disastrous farm policy.

I've got a bale of figures in my briefcase covering the cost of our folly. I guess six CPA's and three Philadelphia lawyers could make real good sense out of these reports. But I can read the total, and the total "realized cost"—that's Washington language—from 1932 to 1959 has been $17,753 million.

Since 1953, the Government has disposed of some $16 billion in surplus commodities overseas, below cost. And we still have $9 million worth left. Farm surpluses today are three and a half times as large as they were at the beginning of 1953. Carrying charges, transportation, interest and the cost of storage amount to more than $1 billion a year—or $2,739,726 per day.

Well, I am sure that you are familiar with all these figures. But please let me point out that, generally speaking, producers of agricultural products—under the price support and acreage limitation program—are finding rough sledding. While producers outside the program—operating on market place values in response to the law of supply and demand—are faring much better than their subsidized brothers.

Even though this program has been a monumental failure, one thing is obvious—we can't end it overnight.

Out in Arizona, my friends in the cattle business tell me that when you suddenly take a calf away from its mother both the cow and the calf do a lot of bawling.

I suspect that if we were to end subsidies, the mother cow—in this case, the big government interventionists who administer the subsidy program—would outbawl the recipients.

You remember back in the days of the depression when Henry Wallace wanted to plow up every fourth row we had planted—creating an artificial scarcity so prices would rise—most Americans were shocked, and a lot of unkind things were said about Henry Wallace. We are more enlightened than he was—we don't plow the crops under—we just put it all in storage and call it surplus and keep on wondering what to do with it.

Democrats say the Republicans are responsible for the farm mess and the Republicans say it's the Democrats who got us into this fix. The truth is, neither one of these statements is correct. We got ourselves into this mess.

Our trouble commenced when we first accepted the notion that governmental intervention—subsidies, controls, concessions, etc.—could be substituted for the creative strength of a free people.

We forgot momentarily that liberty is indivisible.

We cannot have liberty in any realm of our personal activities unless we are willing to accept liberty in all areas. We cannot have economic freedom and political dictation, nor can we have political freedom and economic dictation.

Radical liberals in our century behave as if they believe liberty could be divided.

Economic freedom is rapidly disappearing as the result of a radical liberal attempt to create a society in which one segment of the economy is subsidized while another segment is controlled and a third segment asks to operate on the marketplace values.

The tragic thing about all of these programs of big Government intervention is that they invariably produce waste and create a dependent society. What is more destructive is the creation of a soft and weak people—conditioned to look to big government for the solution of every problem. This was the pattern which preceded the downfall of Egypt, and Rome, and Greece. Are we to sit idly by and witness the destruction of this Republic?

Sophisticated modern know-it-alls have almost succeeded in selling us the destructive maxims of the welfare state. And I would suggest now is the time to recall the truth of those copybook admonitions we cherished as children.

I would suggest that you and I remember, and probably still respect, that commonsense, colloquial admonition "Waste not, want not."

If we are to be victorious in this cold-war struggle against the alien doctrine of communism, we cannot afford to continue wasting human resources; nor can we continue to proceed on the assumption that man's creative ability can be blueprinted and pigeonholed.

Each year in Washington the statisticians with their slide rules have estimated the total wheat crop. They do this with cotton and the other control commodities. Well, let me tell you what has happened to their estimates of cotton production.

The cotton farmers in Arizona, when they found their planting limited to a certain number of acres, improved their technology. They used more fertilizer, they were more careful in their cultivation, and they succeeded in producing a greater total yield of cotton on a substantially decreased number of acres.

When you tell a free American that he can't do something, or try to fence him in, the chances are his inventive genius and tenacity of purpose will find a way to get around the fences and accomplish the thing he was told he couldn't do.

I am reliably informed, for example, that wheat farmers in the semiarid lands of eastern Washington have developed a strain of wheat which resulted in a doubling of the yield per acre.

Does it make sense that this increase of yield and improved technology should become a storage headache for all the people when it should be a blessing for all people?

We are not going to answer the problems created by our unsuccessful approach to them by imposing more limitations.

No one has yet suggested we should set up a governmental agency and put price supports under automobiles or telephones, televisions, or refrigerators, or any of the products of manufacturing.

I did read once the humorous suggestion of a professional writer who proposed that the Government establish a word bank in Washington—in order that he might have a market for his total output. He suggested the Government buy the words he couldn't sell in the open market and put them in a surplus bank. Or how about the buggy whip manufacturer who had no more markets for his product and suggested that the Government buy them at $1.25 and sell them to Europe at $1.

We accepted governmental intervention in the field of agriculture on the assurance of its sponsors that we would achieve these objectives: (1) Assure the farmer an income commensurate with that enjoyed by men in other occupations; (2) produce better food at lower costs; (3) conserve, rather than waste, our natural resources.

The difficult problem of farm surpluses was created by the radical liberal group who mistakenly believed they could apply controls and central planning to only one segment of the Nation's economic life.

Not long ago, one of the Democrat presidential hopefuls made a speech on the west coast in which he deplored the fact that Americans had gone soft.

I do not think Americans have gone soft, but if we have, I would suggest it is the direct result of the spoon-fed, administered society which the radical liberals have attempted to create here—it is the result of our failure to deal bluntly and openly with unpleasant problems and difficult situations.

You and I, as citizens of this Republic, must accept a portion of the responsibility for the present dilemma in which the farmer finds himself.

Commonsense tells us the only way to rescue the farmer and to reestablish his dignity in our economy is to get farm products back on the open market and free the farmer of governmental controls and intervention.

Mr. Henry Hazlitt has suggested the way to do this was to end all farm subsidies and payments on crops not already planted. And then to sell back to the farmers—at prices lower than the cost of production—all the surpluses now being held in Government storage.

Mr. Hazlitt pointed out that no farmer would grow crops when he could buy the crops from the Government for less than the cost of production. He suggested that most farmers would take advantage of the situation to build up the soil and adopt practices which would assure less expensive production when it became necessary to produce crops once more.

Mr. Hazlitt also pointed out the farmers would conform to market demands in the resale of the surplus commodities bought back from the Government.

Since the beginning of the Eisenhower administration, the Republican Secretary Benson has tried desperately to end the present wasteful practices and restore marketplace values in the agricultural industry.

Political pressures and the farming of the farmer for votes, rather than voting for the farmers' good, has prevented this. I would suggest the farm program is only one symptom of the distressing malady of big government intervention which threatens the economy and the future of this Nation.

You and I must decide whether we intend to continue down the road of Federal aid and Federal subsidy. Last year the Federal Congress passed the so-called Defense Education Act. This year they are being urged to pass a Federal subsidy for the constructions of schools. We have Federal aid for airports and Federal aid for highways. These programs always start small, and end big, and the bureaus administrating these programs multiply like rabbits—and and just as hard to kill off.

If we continue down this road, we will become a people who will be leaning on Uncle Sam—and the more we lean, the greater the habit becomes. And no people dependent upon the subsidies of central government can claim to be free.

The preservation of the Republic is not a partisan political issue. We are not divided as Republicans or Democrats. Indeed, had it not been for the valiant efforts of many effective and dedicated Democrats, we might be much closer to complete socializing than we now are.

Growing cattle isn't all beer and skittles. Merchants and manufacturers and doctors and dentists have their problems. But 170 years of progress should certainly convince us that free men, free from governmental interference, produce more, distribute more and contribute more to man's ultimate destiny than a race of dependent, controlled creatures.

I would suggest this Nation still has the strength and courage to face the truth—to reverse the course we have been following the past 30 years—to turn our backs on the errors we have made without indulging in the luxury of name calling and recriminations.

Washington won't do this, and no remote governmental corporation can do this. But you and I can—and must. By apathy and greed we created this situation—with courage and sacrifice we can correct it.

We can reject self-indulgence and demand self-sufficiency.

We can return to those principles of thrift, industry and person-to-person charity which conquered this hostile continent and made America the goal and the beacon light for all men, everywhere.

Declaration of Conscience

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a declaration of conscience made by the three cochairmen of the National Conference of Christians and Jews in Memphis, Tenn.

One of the signers of this declaration is Hon. Walter Chandler, my immediate predecessor in the Congress, who rendered distinguished service to our district and to the Nation as a senior member of the House Committee on the Judiciary. Signing this statement with him is Herbert Moriarty, Jr., a fine lawyer, who represents the Catholic faith in this roundtable. The third signer is Lester A. Rosen, a man of outstanding character, who represents the Jews in Memphis on this committee.

All of us in Memphis are extremely happy that men and women of all religious convictions have lived in a spirit of harmony, understanding, and mutual love. To me, it is one of the substantial contributions made by a united citizenship.

It is the hope of the people of my congressional district that no religious issue will be injected in this coming national election. Likewise, there should be no distinction made as to where a man be born in this great country of ours. I have long felt that what adds to the happiness and prosperity of one section of the United States increases the sum total of happiness and strength to the Nation as a whole.

This declaration of conscience is so well written and is so fundamentally sound that I invite the attention of all of my colleagues to a thoughtful reading of it, and I hope that the wide distribution of the CONGRESSIONAL RECORD to people all over our country and even abroad shall bring stimulation to the people everywhere toward sober and thoughtful dedication to the ideals of true brotherhood.

DECLARATION OF CONSCIENCE

The Memphis Round Table of the National Conference of Christians and Jews reaffirms its principal purpose of espousing the idea of the fatherhood of God and the brotherhood of man.

It is our profound conviction that the sublime and sacred ideals of brotherhood must find expression in all areas of human relation. At this time in our national life when, as free Americans, we are privileged to participate in a great national election, it is our fervent hope that the ideal of brotherhood will prevail. We believe that the injection of religious issues in a political campaign is contrary to the spirit of Americanism and inimical to the best interests of our beloved Nation.

We heed and echo the warning of President Eisenhower that "in this age when so much is expected and required of America, we can ill afford to waste a single day combating bigotry or prejudice at home."

We, therefore, oppose any appeal to religious prejudice. Without expressing any partisanship in favor of, or in opposition to, any political party or candidate for public office, we call upon all American citizens to affirm, by their attitudes and actions, their belief that the members of any religious denomination shall be eligible to serve our Nation and to enjoy any honors which its people may confer.

WALTER CHANDLER,
HERBERT MORIARTY, Jr.,
LESTER A. ROSEN,
Cochairmen of the Memphis Round Table of the National Conference of Christians and Jews.

The New South

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. KEFAUVER. Mr. President, during those dark and bleak days after the War Between the States, the voice of a truly great spokesman of the New South was heard throughout our United States. His name was Henry W. Grady. He was editor of the Atlanta Constitution, but more than that, he was both a prophet and an architect of the future.

I was impressed by a speech made a few days ago by Mr. Grady's grandson, himself now a figure of national prominence. He is Mr. Eugene R. Black, president of the International Bank for Reconstruction and Development. The address was made before the New York Southern Society in New York City last January 15.

In his speech, Mr. Black sums up the many accomplishments of the South since his grandfather's time. He also calls upon the present generation of Americans to conquer the many challenges facing them in the world today.

Mr. President, I ask unanimous consent that Mr. Black's excellent speech be printed at this point in the RECORD for the information and inspiration of all Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MR. EUGENE R. BLACK, PRESIDENT OF THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT, BEFORE THE NEW YORK SOUTHERN SOCIETY, NEW YORK CITY, JANUARY 15, 1960

I am indeed happy to be asked to speak where my father and my grandfather appeared in their day.

I would like to recall tonight something of the vision which drove Mr. Grady up and down this country waving the banner of the new South in Boston and New York and challenging his fellow southerners to erase the stigma of defeat and humiliation through working hard and getting rich.

This vision was an all-consuming passion with him. He often quoted a conversation with his son—my uncle—which took place on the train from Washington to New York and in which his son asked, "Papa, what do you want me to do when I get grown?" "My son," Mr. Grady answered, "I want you to give your life without stint or hindrance until Georgia blooms as Pennsylvania looks today." And so did Mr. Grady, in fact, give his life.

He saw the South before the war of secession as being enslaved by slavery—white and black alike mired in poverty and the whole region in pawn to and dependent on others for much of the wherewithal necessary for modern economic life. He bridled under this dependence for he saw that what was good and unique in southern traditions could not thrive unless the region achieved a measure of self-sufficiency through keeping up with the economic development of the times.

One of his most famous stories revolved around just this point. He told of attending the funeral of a "one gallus" friend of his in Pickens County, Ga., and how the whole affair had upset him. "At that funeral," Mr. Grady said, "they cut through solid marble to make his grave, and yet the little tombstone they put above him was from Vermont. They buried him in the heart of a pine forest, and yet the pine coffin was imported from Cincinnati. They buried him with touch of an iron mine and yet the nails in his coffin and the iron shovel that dug his grave were imported from Pittsburgh. They buried him on the side of the best sheep-grazing country on earth and yet the wool in the coffin bands and the coffin bands themselves were brought in from Massachusetts. They buried him in a New York coat and a Boston pair of shoes and a pair of breeches from Chicago and a shirt from Cleveland. The South didn't furnish a thing on earth for that funeral but the corpse and the hole in the ground."

The new South was the title of Mr. Grady's speech, which Mr. Jackson referred to, before the New England Society at its annual banquet in 1866—the year the New York Southern Society was founded. Despite the profuse hospitality of his hosts, it is hard for me ont to believe that my grandfather didn't feel a bit like Daniel walking into the lion's den that evening. Mr. Grady was not then a nationally known figure; he was just a newspaper editor from Atlanta who had the gift of golden words. His speech was preceded by a long, florid—and very pious—tribute to the "glorious Union armies" by Dr. DeWitt Talmage and his dinner partner was none other than Gen. William Tecumsah Sherman.

But Mr. Grady warmed to his subject, as was his custom, spinning out colorful figures, tendering elaborate compliments—often with a sharp point nestled in the cotton of his words—and digressing for a self-deprecating joke along the way. He paid a handsome tribute to Abraham Lincoln—"that typical American, the sum of Puritan and Cavalier." He answered Dr. Talmadge's tribute with a tribute of his own to the defeated armies at Appomattox, and he topped it off with a quote from an aprocryphal soldier who was said to have remarked to his comrades, "You may leave the South if you want to, but I am going to Sandersville, kiss my wife, and raise a crop, and if the Yankees fool with me anymore I will whip 'em again."

He even tilted his lance at General Sherman who, he said, "is considered an able man in our parts, although some people think he is kind of careless with fire."

But when he reached his favorite subject—the New South—he pulled out all the stops. "We have sowed towns and cities in the place of theories and put business above politics," he said. "We have challenged your spinners in Massachusetts and your iron-makers in Pennsylvania. We have reduced the commercial rate of interest from 24 percent to 4 percent and are floating 4-percent bonds. We have established thrift in the city and country. We have fallen in love with work. We have restored comfort to homes from which culture and elegance never departed. We have let economy take root and spread among us as rank as the crabgrass which sprung from General Sherman's cavalry camps. Above all, we know that we have achieved in these piping times of peace a fuller independence for the South than that which our fathers sought to win in the forum with their eloquence or compel on the field by their swords."

Of course, Mr. Grady was a little ahead of himself. Perhaps he anticipated the great growth of the South a bit because J. Pierpont Morgan was in his audience and everybody knows that an investment banker in hand is worth several in the bush.

But Mr. Grady's prophecies have, in fact, come true. If the South is still plagued with many problems as the result of its unique heritage, it has in the last 30 years become a region of great economic strength in the strongest nation in the world. There are fewer farmers and less farmland under plow in the South now than there were, say, in 1920; but half again as much is being harvested from each acre, and the income of the South's farmer today is two-thirds higher in real purchasing power than it was in 1920. The growth of manufacturing in the New South is a very familiar story to all of you; in this past year alone 1,000 new manufacturing enterprises were established in the South. But sometimes overlooked is the growth of trade and service industries—a growth that has actually provided more new employment and new wealth in the South than has manufacturing (though much of it was, of course, dependent on manufacturing). There is a market in the South today which wasn't dreamt of even as late as 1939.

Economic development is like a breeder reactor: it produces its own fuel. This is what has been happening in the New South for three decades now.

And while the dangers of overcentralization in Washington still fire southern politicians as they did in Henry Grady's day, who's to deny that the South is much less vulnerable, much more independent today than it was then? The unique qualities, the very special traditions which make the South the most distinctive of all American regions are much better safeguarded now in the midst of relative prosperity than they were in the very dependent days of the last century.

I would speak, in conclusion, of one southern tradition which, I think, is especially important today. I refer to the South's traditional awareness of the world outside our borders. The South never succumbed to one temptation that infected most other regions of the country—the temptation to retreat from world problems into a self-righteous isolationism.

Guided by its own self-interest at the time, it is true, the South nonetheless provided the bulk of the political opposition to the sorry policies of economic and political nationalism which disfigured the American record in the 1920's and so helped to set the stage for World War II.

In the thirties it was a Tennessean, Cordell Hull, who masterminded the enlightened Reciprocal Trade Agreements Act and it was southerners who piloted it through Congress; today one-third of the foreign trade of the United States passes through southern ports.

In the forties and fifties it was the Texan, Tom Connally, the Kentuckian Alben Barkley, the Georgian, Walter George, and the Carolinian, Jim Richards, among others who helped lead the small group in Congress most closely identified with policies designed to deal with the realities of a world in which the United States had grown into a position of preeminent power. All these men, and many southern leaders in Congress today, had the courage to realize early in the game that the United States, thanks to our ideas

and achievements, had to be prepared to live with the impact of its power on the world and to try to aid others struggling to make peace with the 20th century on terms compatible with the continued growth of individual freedom and well-being.

It was logical that the South should produce leaders to match today's most exacting challenge. The South was never quite so underdeveloped a country as we use the term today; even in the low days of the early 1930's, per capita incomes in the South were greater than such rich countries as France and Holland. But the South, unique even among American regions, has experienced profoundly the kind of progress that comes with falling in love with work and with placing business above politics. There is no more valuable experience I know of in dealing with the problems which our country faces today.

For today all sorts of historic political problems—problems of the relations among nations and races; of the relations between the individual and the state—have become inextricably enmeshed in the fact of widespread poverty which prevails over more than half the globe—a kind of poverty that is like nothing we have ever experienced in this country. The sources of this poverty are many and varied; it is bound up in ignorance and pride; in the contrary effects of the application of a modern science which can lower a death rate by half much quicker than it can increase the volume of food available to feed exploding populations. It comes about as a result of people clinging to old habits and attitudes toward life when these habits and attitudes have been rendered inadequate by economic development that has already taken place.

Simply put, the task the United States faces today is to preserve the balance of hope at a time when the balance of power is only precariously maintained by the production of weapons capable of destroying civilization. And unless more of the world can see hope for an escape from their poverty—an escape which does not do violence to our ideals of individual freedom and tolerance among nations—then our own hopes for a world less threatened by war and less tempted by totalitarian doctrines are bound to go aglimmering.

The people in these poor countries are searching for an escape from an agonizing human predicament—one which we must share with them since it involves our own future security and well-being. We who found an escape from our own agonizing predicament through the process of getting rich—or at least of getting less poor—have much to offer to these people by way of guidance and understanding.

I have met around the world hundreds of leaders who believe after the fashion of Henry Grady that they can, through hard work and sticking to business, achieve a much truer and fuller independence than they can ever achieve through international debate and international conflict. But these men and women are beset on all sides with frustrations and temptations to seek an escape from their poverty, not forward but backward into chaos or tyranny. They must have hope in order to have the courage of convictions that, by and large, they received from our ideas and accomplishments. We can, if we want, give them a crucial measure of hope, and we should do so, for these people are our natural allies.

Progress, perhaps, can best be defined as a series of escapes from one predicament to another, with the quality of hope sustaining more and more along the way. Nowhere in history has a society devised a way of life so spectacularly successful by this definition of progress as here in the United States. If this success is more than just an accident, brought about by favorable historic and economic conditions, then we can and will find ways of helping these far-off people to escape their present predicament into one more hopeful and more compatible with our ideals of freedom and tolerance, and of guiding their feet, and our own, into the way of peace.

Scouting's Golden Jubilee Year

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. NATCHER. Mr. Speaker, the Boy Scouts of America will observe the 50th anniversary of their founding during the week of February 7 through 13. The phenomenal growth of the Boy Scout movement in the last 50 years is indeed worthy of our attention, and I would like to take this opportunity to review briefly the many services rendered to the American people by the members of this fine organization.

A résumé of the activities, campaigns, and projects undertaken by the Boy Scouts in the past half century immediately reveals service, unselfish and unstinting, freely given with no thought of personal reward, as the outstanding characteristic possessed by all boys who have taken the Scout oath.

In 1914 Scouts started work with the National Safety Council on safety-first principles. 1915 was a year for special emphasis on the training of volunteers to properly serve American youth through Scouting, and the National Education Association endorsed the Boy Scout program. The war years of 1917 and 1918 saw Scouts all over the country cultivating home gardens, cooperating with the Red Cross through its local chapters, working with the Navy Department in organizing an Emergency Coast Patrol along the seacoast towns, and doing nationwide service in the influenza epidemic. The slogan "The War Is Over, but Our Work Is Not" was adopted in 1919 and President Woodrow Wilson proclaimed a special "Boy Scout Week" in recognition of Scouting's warwork.

Boy Scouts assist in sanitary survey of several cities; Scouts utilized as forest guides and fire wardens; a group of Scouts serve in escorting the body of the Unknown Soldier from the ship to the Capitol; War Department commends Scouts for service in connection with Knickerbocker Theater disaster in Washington, D.C.; trees planted by the Boy Scouts reach into the millions; Boy Scouts continue great forest protection work; special emergency service in connection with tornadoes, earthquakes, hurricanes, floods, and fires; Scouts build trails in national parks; Scouts serve as ushers and flagbearers at the national conventions of the leading political parties; Boy Scouts work with relief agencies toward relief of the unemployed; scouting plays an increasing part in the rehabilitation of youth in juvenile institutions; Scouts adopt slogan of "We, Too, Have a Job to Do" during World War II and prove once again their usefulness in time of war as well as peace. And so the long list of achievements is added to year after year as the Boy Scouts of America continue to serve the Nation—always ready, always willing to do a good turn, from the small, individual kindness to the nationwide campaigns. It seems to me that the record speaks for itself and it is impossible to overestimate the impact for good the scouting movement has had at all levels of our national life.

I would like now to mention two aspects of scouting which I believe are of particular significance. One is the high caliber of the men who have dedicated themselves to the Scouting movement for it is through their skills, their deep understanding of a boy's needs and their inspired leadership that boys are attracted to scouting. These volunteer leaders, who now number well over 500,000, are well trained in courses arranged by the National Council. However, it is not simply their technical ability, their patience, and their willingness to give so generously of their time and energy that makes them invaluable leaders in this organization, but also by the example they set in their personal lives which creates enthusiasm for the ideals of Scouting in the young man. We are fortunate in the Second District of Kentucky in having men who recognize the vital importance of instilling in our youngsters the ideals of honesty, patriotism, service, and Godliness. To these leaders of the Boy Scouts of America I offer my gratitude for the wonderful work they are doing with the youth of our Nation.

The other aspect of the Boy Scout program which I feel is especially pertinent at this time is its effectiveness in combating juvenile delinquency. In my section of Kentucky we have Boy Scout troops not juvenile gangs. The boy's natural desire for acceptance, competition, and association with other boys his age is fully satisfied in the Scout troop, and the bid for attention through acts of violence is not necessary. As the number of boys participating in the scouting program increases, the incidence of juvenile delinquency decreases proportionately.

Mr. Speaker, I salute the Boy Scouts of America and their leaders on the celebration of their golden jubilee year and wish them continued success in all their endeavors. The strength of America depends on the strength of the rising generation, and the Boy Scouts of America are doing more than any other organization I know to prepare our youth to meet the challenges of tomorrow with stout hearts and sound principles.

Memorial to Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. WILLIAMS of New Jersey. Mr. President, Woodrow Wilson won the respect of many men in many nations dur-

ing his term as President of the United States. In seeking justice for all peoples he made it clear that this principle, which guides American democracy, should be extended to all nations.

An editorial in the Hairenik Weekly of January 28, 1960, sums up the feeling of admiration for Wilson felt by one group, the Armenian Americans.

The special interest of New Jersey in this adopted son who served as Governor before he became President is reflected in an editorial which appeared in the January 30 issue of the Bergen Evening Record of Hackensack, N.J.

Mr. President, I ask unanimous consent that both these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Hairenik Weekly, Jan. 28, 1960]

THE WILSON MEMORIAL

The project for the erection of a Woodrow Wilson Memorial comparable in dignity and magnificence to those of Washington, Lincoln, and Jefferson, now being pressed by Senator HARRISON A. WILLIAMS, of New Jersey, is a movement which is close to the heart of every Armenian American. As a matter of fact, no extraordinary effort is necessary to generate enthusiasm as far as the Armenians are concerned.

Woodrow Wilson, the great and humanitarian American President, entered into the Armenian picture during the postwar period of World War I when the warring nations, assembled at the Paris Peace Conference, were wrestling with the solution of the problems which confronted the world. There were the victors and the vanquished. There had been aggression and the repression of that aggression. Great wrongs had been committed by nation against nation.

One of the wronged nations whose status demanded immediate solution were the Armenians who, fearfully decimated by the infamous Turkish deportations, had rallied themselves, had fought last ditch battles, and in the face of annihilation, had fiercely defended themselves, had repelled their mortal enemy, and had won their independence.

In those trying days, President Wilson had posed as the greatest champion of small wronged peoples, foremost among them the Armenians, who became the object of his special concern and indefatigable labor. He it was who insisted on the complete liberation of the captive races of the former Ottoman Empire; he it was who insisted on the independence of Armenia, and he it was who eventually drew the historic boundaries of Armenia.

At that time, so great was the charm of the American President that almost all the small and oppressed peoples of the world hailed him as a veritable messiah. Most worshipful of him among these were the Armenian people who, practically, reposed all their hopes for final liberation in the authority of his word.

Even before and after the declaration of Armenia's independence, there were forces afoot to put the young Republic under the mandate of a powerful European country. This movement was advanced, not in contradiction of the desirability of absolute independence which, under normal circumstances would be the wish of every proud nation, but it was due to considerations of expediency and practicability.

It was realized that the Armenian people, although now independent, had been fearfully decimated by their mortal enemy. They were an exhausted and weakened people. They had been impoverished by the ravages of the massacres, the loot and the destruction which followed. They had no economy, no means of transportation, no communication media, no resources, no reserve supplies to tide them over. They had to start from scratch.

Furthermore, they were surrounded by neighbors who were not friendly, and who still posed a menace to the safety of the new state. They needed security and support to consolidate the nation.

Under the circumstances, the desirability was advanced, both by the Armenians themselves, and their friends the world powers, of a period of protectorate under a mandate until such time when the new state could stand on its feet, without compromising or jeopardizing the nation's independence.

Woodrow Wilson was a strong advocate of the mandate. He passionately wanted that his country would assume that mandate, he wanted to give the Armenians the security they wanted, he wanted to help the Armenians. And yet there were forces beyond his control. There were well-intentioned Americans who both wanted to help the Armenians, and yet they were opposed to the idea of a mandate. They wanted to recognize the independence of Armenia right away, and they even wanted to extend the new republic a financial loan.

Wilson's wish was rejected and the mandate failed. Yet, even this day, who knows its fateful consequences? Who knows if the West today might have profited had the American mandate gone through?

Had America assumed the mandate, Armenia would still be free today, and we venture to say, even the whole of the Caucasus might have been saved from the encroachments of the Soviet, even as Greece was saved through American intervention, and even as Persia was saved from Soviet conquest.

All the same, all of this is water over the dam. Postmortem regrets avail little in repairing the damage that has been done. And yet, the Armenians are grateful to Woodrow Wilson, the immortal President, for what he wanted, and tried to do for the Armenians.

A Woodrow Wilson memorial, no matter what the form, shall always be a sacred shrine, where the Armenians will make their pilgrimages, to offer a prayer, and to bless the memory of their incomparable friend and benefactor.

[From the Bergen Evening Record, Jan. 30, 1960]

HONORING OUR OWN MAN WHO

New Jersey has boasted many a giant in many a field, but the State has had only one native son who became President of the United States. An adopted son who also achieved that office was considerably more illustrious. That, of course, was Woodrow Wilson. He was born in Virginia. But he was Governor of New Jersey in 1912 when first elected President.

Senator WILLIAMS, Democrat, New Jersey, has, with 41 other Senators as cosponsors, introduced a resolution to create a Wilson memorial. The bill sets up a commission to decide whether the memorial should be a functional one, such as an institution or a foundation, or should be another bronze or temple.

As to the form the memorial should take there can be some honest difference of opinion. It seems incredible any one would oppose the basic idea.

From Herbert Hoover's scholarly study of Mr. Wilson's Presidency we know it was not a wholly happy one. He was President during the first great war involving all the major nations of the world, gallantly as he tried to keep the United States out of it. He was the first authentic proponent of true international mediation in the League of Nations, only to be rebuffed in his own country. If he was almost an ascetic, he was also brilliant and wholly sincere.

Surely Mr. WILLIAM's proposal will receive the support if deserves—first, one hopes, from New Jersey.

Statement of Gov. John Patterson, of Alabama, on Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF GOV. JOHN PATTERSON, OF ALABAMA, BEFORE THE RULES AND ADMINISTRATION COMMITTEE OF THE U.S. SENATE, WASHINGTON, D.C., FEBRUARY 2, 1960

Mr. Chairman and members of the Rules and Administration Committee of the Senate, my name is John Patterson and I am the Governor of the State of Alabama. I am presently serving a 4-year term which began January 19, 1959. Prior to that date I served as attorney general of Alabama from January 18, 1955, to January 19, 1959. I wish to thank you for the opportunity that you have given me to testify before you on this occasion.

I wish to voice my strong opposition to bills S. 2535, S. 2684, S. 2719, S. 2722, S. 2783, and S. 2814 now pending before your committee. These bills are far reaching in nature and seek to make radical changes in our basic laws. If these bills are enacted into law the implementation of such laws will lead to chaos and bitterness, and a further deterioration of the relations between the States and Federal Government. If these bills are enacted into law they could well lead to a breakdown of the election machinery in many States. I feel that I know the sentiment of the people of Alabama, and I know that the overwhelming majority of the citizens of my State are opposed to the passage of these bills. As Governor of the State, I feel it my duty to tell you the feeling of our people.

The enactment of these bills will lead to grave consequences and these bills will not succeed in doing that which the authors of the bills intend.

S. 2535 seeks to establish an agency of Congress authorized to conduct elections and register voters in certain areas under certain conditions. This bill seeks to establish a Congressional Elections Commission for this purpose. Bills S. 2684, S. 2719, S. 2783 and S. 2814 are similar and provide that where a person's application to register to vote has been denied and such person believes himself to be qualified under State law, and believes that he has been denied registration because of race, religion, color, or national origin, he may file a petition with the President, requesting that a Federal registrar be appointed for the district in which such person lives.

The bills further provide that when the President receives not less than nine petitions within 1 year from persons in the same registration district, he shall refer such petitions to the Civil Rights Commission for investigation. If the Civil Rights Commission determines that such persons are being denied the right to vote solely because of

their race, religion, color, or national origin, the Commission shall certify such information to the President.

The President then, under these bills, would appoint a Federal registrar for the district involved and the registrar would accept registration applications from all persons in the district who claim that they are being denied the right to vote because of race, religion, color, or national origin. If the Federal registrar determines that the applicants are qualified under the State law he shall certify the names to the State election officials, and such persons would have the right to vote in any election where Federal officials are being elected. The bills place a fine and penitentiary sentence on any State official who does not abide by the decisions made by the Federal registrar.

S. 2535 is similar to the aforementioned bills in that it attempts to do the same thing except it provides for a Registration of Voters Commission instead of Federal registrars.

S. 2722 requires State officials to preserve all registration and voting records of all elections for a period of 5 years after the making of the record.

I know that the members of the committee are familiar with these bills; however, I have attempted to summarize them briefly for the purpose of showing that we are dealing here with something new in the way of legislation, and to further show what a radical departure this procedure is from any registration procedure that any State has ever had before.

The Constitution of the United States does not give Congress power to prescribe the qualifications of electors in the States. The Constitution leaves the setting of the qualifications of voters to the States. In my opinion these aforementioned bills now under consideration are clearly unconstitutional. They are an attempt by the Federal Government to set the qualifications of electors in the States and to put Federal officials actually in charge of elections in the States. Such action is a usurpation of the powers of the States by the Federal Government and is a clear violation of the sovereign rights of every State in the Union.

The sponsors of these bills are inferring that our State officials are violating their oaths of office. I resent this inference. I can truthfully say of my own personal knowledge that the officials of my State are obeying the law, doing a good job, and living up to their oaths of office. This type of legislation is an insult to the officials of every State in the Union and obviously is politically inspired.

The right to vote is conferred and safeguarded by each State constitution. The laws of Alabama setting out the qualifications for electors are fair, just, reasonable, and impartial.

Adequate remedies exist to protect each and every individual in his right to register and vote. No one can come before this committee and truthfully tell you that the laws of my State protecting the right to vote are not adequate. If a person in Alabama files an application with the board of registrars of his county asking that he be placed on the list of qualified voters and the board of registrars denies his application, the applicant has the right of appeal, without giving security for costs, within 30 days after such denial, by filing a petition in the circuit court at law or court of like jurisdiction held for the county in which he seeks to register. The petitioner must allege that he is a citizen of the United States, over the age of 21 years, has the qualifications as to residence prescribed in section 178 of the constitution of Alabama and is entitled to register to vote under the provisions of the constitution. The issues are tried in the court in the same manner and under the same rules as other cases are tried, and by a jury if the petitioner demands it. The circuit solicitor defends the action for the State. If the petitioner wins his case in the lower court, the State has no appeal and the petitioner's name goes on the qualified voter list forthwith.

If he loses his case in the lower court, he can appeal to the supreme court within 30 days from the date of the judgment. If the petitioner loses his appeal in the State supreme court, he can appeal to the U.S. Supreme Court. A judgment in favor of the petitioner under our law entitles him to be registered as of the date of filing his original application with the board of registrars. This procedure is similar in all States and it is a proceeding whereby a person's rights are tested by the judiciary, which is as it should be. I submit to you that this is a full and adequate remedy for each and every individual who claims that he has been denied the right to register as a voter because of race, religion, color, or national origin, or for any other reasons which he might think unconstitutional.

I can truthfully say that I cannot recall a single instance where a Negro has filed an appeal under our State statutes claiming that he had been illegally denied the right to register. Furthermore, I can truthfully state that since January 18, 1955, when I took office as attorney general, not a single Negro has taken an appeal under our statutes providing for appeals where boards of registrars have turned down applications to register.

How can anyone come in here and truthfully say to you that our laws are inadequate when none of the complaining Negroes have taken advantage of our statutes. How can anyone say that the State of Alabama has denied citizens the right to vote when they have not even tried to use the remedies which the State gives them to protect their rights. The mode by which they may obtain justice is clearly marked out by the State law. It is so plain and simple that any citizen may readily avail himself of it. Yet the few complaining persons have not done so. Why?

I feel that the real reason why the agitators, who are constantly bringing up this issue, have not resorted to our courts for relief, if they are entitled to such relief, is that the Federal courts have consistently held that class actions will not lie in cases testing the qualifications of persons to vote. The courts have consistently held that each individual case and each individual's qualifications to vote must rest upon the facts in each individual case and that, of course, is as it should be. The proponents of this type of legislation under consideration by this committee are not content to seek individual redress through the courts. That's too slow for them.

What they seek is a procedure which circumvents the courts and sets up an administrative procedure whereby Negroes can be herded together and marched in battalion formation to the polling places under the watchful eyes of Federal registrars and Federal marshals to register and vote whether or not they can read and write, and whether or not they are qualified otherwise under State laws. The proponents of this legislation are not interested in a judicial determination of an individual's rights, but only in mass registration before the next election. We have not had anything in the South similar to Federal registrars as outlined in these bills since Federal troops occupied the South during reconstruction days.

I submit to you that the statutory procedures for testing a person's right to vote under our State law are full, adequate, and reasonable. This is the proper and orderly way for a person to have determined his right to vote if he feels that it has been illegally denied. Certainly, this committee, and this Congress, should require these complaining people to at least try to seek relief under the existing laws, which heretofore they have not done, before this committee or this Congress should resort to such a radical procedure as sending Federal registrars into the South to usurp the powers of our State officials and to usurp the powers of our courts. Make these complainants go to the courts for their relief. They have not done so and I submit to you if you make them, their rights will be promptly and adequately determined.

S. 2814, S. 2783, S2719, and S. 3634 provide for investigations to be made by the Civil Rights Commission in cases where individuals claim they have been denied the right to vote because of race, religion, color or national origin. I wish to voice my strong objections again to the actions of the Civil Rights Commission, and I urge you not to extend the authority of that body. The recent actions of the Civil Rights Commission damaged race relations in the South and further injured the already strained relations between the States and Federal Government. The Commission failed to do anything constructive but, on the contrary, further widened the breach existing between the races. It harassed and intimidated our State and local officials. Its actions have made it difficult for us to find responsible citizens who are willing to serve as members of the boards of registrars.

The Commission attempted to sit in judgment over the manner in which our officials conducted their offices. It interfered with the operation of our courts. The Commission attempted to arrogate unto itself powers which it did not, and could not constitutionally possess.

It claimed to be "a roving grand jury" with the powers of a common-law grand jury, a position legally untenable. The Commission attempted to go on "fishing expeditions" in the records of judicial officers. It subpenaed our State officials to hearings at distant places from their homes and put them on the witness stand under spotlights and before batteries of nationwide television cameras. No room or seats were provided for counsel of the public officials and the Commission would not allow attorneys for the officials to make objections. The State officials were in effect placed on trial by the Commission and publicly harassed and intimidated. The Commission attempted to go far beyond its factfinding powers, and hearings were conducted in a circus-like arena and no semblance of due process was accorded our State officials.

It is inconceivable that persons trained in the law would be a party to conducting such hearings as were conducted by the Civil Rights Commission. The Commission accused our public officials of violating the law, but refused to divulge the names of their accusers or to advise them of the nature of the charges against them. The Commission refused to permit the State officials' counsel to properly represent them and refused to allow them to cross-examine the witnesses who appeared against them. In fact, the actions of the Civil Rights Commission were so reprehensible that it was enjoined from conducting any further hearings by the Federal court in Shreveport, La., until the constitutionality of their procedures could be tested by higher courts. The Commission came into the South ostensibly to seek facts but in reality it was seeking publicity and notoriety.

I take issue with the report filed before Congress by the Civil Rights Commission. The information in that report is biased and prejudiced and is not based upon proper investigation. A large portion of the report of the Civil Rights Commission is in the form of editorials by the Commission's staff writers. The actions of the Civil Rights Commission in Alabama created ill will and hos-

tility between the people of my State and the Federal Government. The Commission accomplished nothing but its actions seriously injured race relations in the South. I ask you not to favorably consider any more legislation which would enlarge the powers of the Civil Rights Commission. Such action would not be in the best interest of our Nation.

No public official cares to serve in public office when he is subjected to harassment and intimidation by agents of the Civil Rights Commission, or any agency for that matter. No person likes to accept an appointment as a member of a board of registrars when he knows that he will be immediately visited by Federal investigators and run the risk of immediate suit in Federal courts seeking injunctive relief and damages. Recently President Eisenhower stated that he was having difficulty finding persons willing to accept appointment to fill the vacancy on the Civil Rights Commission for, as he said people do not like to be harassed.

The Attorney General of the United States and the Civil Rights Commission have apparently declared open war upon all members of State boards of registrars and they are making it difficult for us to find people who are willing to serve in that capacity. In most States the members of boards of registrars do not receive much pay and they agree to serve usually as a public service. They cannot afford lawyers to defend them, nor can they afford to attend court or hearings in distant places which takes them away from their work and families.

No member of a board of registrars likes to have a Federal agent peering over his shoulder, passing upon everything that he does and threatening to take him to court with every act. If the actions of the Federal Government in this regard continue and if "Federal registrars" are sent into the South along with the Civil Rights Commission investigators to carry out the provisions of the aforementioned bills, it could well lead to a breakdown of all our election machinery. It will certainly lead to bitterness and misunderstanding and hostility between the State and Federal officials. The people will suffer the consequences. I can tell you that it would be practically impossible to get people to serve as election officials if they are dictated to, threatened, and harassed by "Federal registrars" and Federal agents. It is plain to see that the so-called Federal registrar plan will result in utter failure and bring confusion and chaos to our electoral system.

Due to the action of the Civil Rights Commission, we have been unable to get responsible people to accept positions on the boards of registrars in Macon and Dallas Counties, Ala. I have appointed numerous persons to fill these positions and they have declined stating that they do not feel that they should have to subject themselves to public intimidation and harassment by Federal agents. The responsibility for the breakdown of our registration machinery in these counties rests squarely at the doorstep of the Federal Government. I feel confident that we will be able to find someone to serve on these boards soon, if we can have some assurance from the Federal Government that we will be able to carry out our duties within the framework of our laws without harassment and intimidation.

In conclusion, I want to again voice my strong opposition to all the aforementioned bills. They are clearly unconstitutional. They invade an area which has always been left exclusively to the States. The States have adequate remedies for all persons to quickly and promptly test their right to vote.

S. 2722 requiring the preservation of voting and registration records for a period of 5 years is absolutely unnecessary and an invasion of the rights of the States. Alabama law, which is similar to that in all States, provides that when an applicant is registered to vote by the board of registrars, his name is placed on the voters list and this list, along with his application, is filed with the probate judge of the county and becomes a permanent public record. Of course, after a person is registered, he should have no grounds for complaining. In cases where the application is denied by the board of registrars our laws provide that the board of registrars must keep on file the application form until the time expires for the applicant to appeal under our statutes. This procedure gives full and adequate protection to all citizens regardless of who they are, if they would just avail themselves of the remedies now available.

The sending of Federal registrars or a Registration of Voters Commission into the South, or into any State, would cause animosity and hostility among the people and would result in a breakdown of our election machinery. Such action would cause further widening of the breach between the races and would worsen Federal-State relations. The citizens of the States would look upon these Federal agents as "carpet bag registrars" and that is truly what they would be.

Any extension of the powers of the Civil Rights Commission would do nothing to help the situation and would cause a further deterioration in race and Federal-State relations. Federal registration of voters in addition to being unconstitutional and unwarranted, would not work, would lead to grave consequences, and I think would be analagous to the sending of Federal troops into Little Rock or the acts of Federal troops in marching Negroes to the polls during reconstruction days.

The views which I have expressed about the Civil Rights Commission are not mine alone but are shared by almost every citizen of my State. As further proof of the Commission's questionable conduct, one can refer to the actions in the Federal courts involving the Civil Rights Commission in Terrell County, Ga.; Montgomery, Ala.; and Shreveport, La., where the Federal courts ruled against the Civil Rights Commission in every case.

In recent days the Attorney General of the United States has expressed himself as favoring a plan whereby the Federal courts would appoint so-called "referees" to register voters. This proposal is just as shocking as the "Federal registrars" proposal and just as unconstitutional and unworkable. I am equally opposed to the plan of the Attorney General. The Federal courts have already expressed their opposition to being used as Board of Registrars. See *Darby* v. *Daniels*, decided November 6, 1958, in the U.S. District Court for the Southern District of Mississippi.

I would like to point out to the committee that the number of registered Negro voters in Alabama is steadily increasing. This is not due to action by the Civil Rights Commission or the Federal Government, but it is in spite of them. At present there are more than 70,000 registered Negro voters in Alabama. The number of registered Negro voters in Alabama has more than doubled since 1956. The number has increased more than 10 percent since the primary election of 1958. The Negro is making tremendous progress in Alabama. I ask you not to enact laws which would retard his progress. These aforementioned bills now pending before your committee would retard the Negroes' progress. Matters concerning race relations will never be solved by legislation, court decrees, injunctions, Federal troops and "Federal registrars." It can only be solved through local people working together in a spirit of cooperation without outside interference and agitation.

We have on our books the necessary laws to protect every person's right to vote. They are State laws and State remedies and that is the way it should be. I ask you to leave it that way, and require these persons who complain that their rights have been violated to seek their redress in the proper and legal manner in the courts of our States. They have not done this in the past. They cannot tell you truthfully that our remedies are not full and adequate. So, before you resort to "carpet bag registrars" and Federal investigators, before you do harm to our people, before you do violence to our Federal system, before you resort to the tactics of grinding us under the heel of the Federal boot, and before you wreck our election machinery, make them at least try to test their rights in our State courts.

International Radio Agreements

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. BUTLER. Mr. President, on Monday of this week a subcommittee of the Senate Committee on Foreign Relations held hearings on the question of ratification of two highly important international radio agreements, the North American Regional Broadcasting Agreement and the Broadcasting Agreement with Mexico. In this week's issue of Broadcasting magazine there appeared an editorial entitled "NARBA Now or Never." As a member of the Senate Committee on Interstate and Foreign Commerce, I was especially interested in this editorial, and call it to the attention of my colleagues. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NARBA Now or Never

All but lost in the turmoil involving broadcasting is the 10-year-old treaty on AM broadcasting on the North American Continent which has languished before the Senate Foreign Relations Committee. Failure to ratify the NARBA treaty, and the collateral 1956 agreement with Mexico, at this session could trigger an allocations war of indiscriminate channel jumping with disastrous effects on reception.

The Daytime Broadcasters Association, which asserts representation of some 250 of the 1,700 stations now operating from sunrise to sunset, has openly lobbied against Senate ratification. Two bills are pending to instruct the FCC to authorize 6 a.m. to 6 p. m. operation. The FCC, the State Department and virtually all other entities in AM radio, have implored the Senate to ratify the agreements or invite chaos. But the daytimers have been able to muster sufficient strength to block action.

There has been one significant development, however. The regional stations, which heretofore have put up no organized resistance, have now established Regional Broadcasters for the avowed purpose of fostering Senate ratification. At long last, they real-

ised that while the daytimers have ostensibly sought fixed hours only on Mexican and U.S. clears, the legislation they espouse would strike at domestic regionals, and without directional or any other protection. The FCC has twice rejected the daytimers' proposals, so they now seek from Congress what they cannot get from the expert body charged with the responsibility of providing maximum interference-free service to the public.

The daytimers cannot be criticized for wanting to improve their lots, notably during the most lucrative radio hours. But they should not seek to do it at the expense of old-established services or through legislative pressure. The new Regional Broadcasters, organized at the call of Payson Hall, director of broadcast properties of Meredith, has no simple task, because it is easier to block legislation than to enact it. Ratification hearings begin today (January 25) before the Senate Foreign Relations Subcommittee.

Among the regionals are many of the old-established most respected stations. This is their opportunity to cite the facts. And there isn't too much time in which to do it with Congress eyeing adjournment by July.

Helping the Disabled

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. WHITENER. Mr. Speaker, on January 13, 1960, I introduced a bill in the House of Representatives to liberalize the disability provisions of the Social Security Act.

In the January 29 edition of the Shelby Daily Star, Shelby, N.C., there appeared a very fine editorial in connection with my measure. With the thought that my colleagues might like to read the editorial I request unanimous consent that it be inserted in the Appendix of the RECORD.

The editorial follows:

HELPING THE DISABLED

Congressman BASIL WHITENER's proposal to change the disability provisions of the social security law has merit.

A person now must be physically or mentally unable to do any type of work in order to receive disability benefits. WHITENER's bill would amend the law so that benefits could be received if a person, by reason of physical or mental impairment, cannot perform the job in which he was last regularly engaged.

It makes sense. A man who has spent his adult life in one trade or occupation is usually ill-equipped to earn comparable income in some other. Nor is it easy to find someone who will hire him.

The fact that a welder or a steeplejack, injured in an accident, can still get out and sell pencils, should not disqualify him from drawing disability benefits.

Although we think Congress is sometimes incautious in liberalizing the social security program, which was never intended to be a full retirement plan, it would be justified in passing this amendment.

Reserve Officers Association "Man of the Year" Award to Bryce Nathaniel Harlow

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Col. Jesse B. Stuart, which appears in the February 1960, issue of the Officer, the official publication of the Reserve Officers Association, entitled "Harlow Minuteman of 1960." This article refers to Bryce Nathaniel Harlow, Deputy Assistant to the President, who has been selected to receive the Reserve Officers Association "Man of the Year" award for 1960, at the midwinter conference of the ROA to be held in Washington this week.

Bryce Harlow has demonstrated outstanding intelligence, wisdom, and ability in performing his highly responsible task as Deputy Assistant to the President for Congressional Relations. He commands the liking and respect of all who know him, and I am sure that many will share my feeling of gratification at his selection to receive this distinct honor from the Reserve Officers Association of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARLOW MINUTEMAN OF 1960—CITIZEN OF THE YEAR AWARD GOES TO A "LITTLE GIANT" WHOSE RECOGNITION AS A PATRIOT NO LONGER CAN BE DENIED

Usually, when one considers the likely candidates for high office and high honors, the image of a giant comes into mind.

This great American weakness for glamour, this continuing invitation to delusion by idols with feet of clay, may plague us down through the future years.

But in 1960, ROA has named for its citizen of the year one who, by common standards, has claim neither to glamour, high office, nor giant physical stature.

I first met Bryce Harlow in General Marshall's office in 1943. He was—and is—a little man. But he had a great brain, and a fine hand, and everyone seemed to recognize that the little captain was a right arm and a stone wall as a cog in the great machine the Army Chief of Staff was using.

Bryce had come to Washington as assistant to a Member of the House and along the political paths bringing him to Washington he had picked up considerable moxie.

It was not until after the Army had promoted him to lieutenant colonel and awarded him the Legion of Merit that I found out his moxie had a firm foundation.

At the University of Oklahoma, he had made Phi Beta Kappa for his undergraduate work, and later he had earned his master's in political science.

After our brief acquaintance in the Pentagon, I took off on secret missions, which took me to a place called Normandy, and it was sometime later that I got out of a field hospital at Bastogne and back to Walter Reed. My first visitor was Bryce Harlow, and I'll always remember his thoughtfulness.

In 1945, "Uncle Carl" Vinson demonstrated his brilliance by bringing Bryce into the House Armed Services Committee as staff director, and Col. Bob Smart, who now holds that job and does his work brilliantly, will understand my assertion that nobody ever again will run the committee with the knowledgeable firmness of the "Little Colonel." Bryce saw the groundwork for one postwar military policy laid, including our Reserve program, and in 1951, he took off for Oklahoma City.

Life on the Potomac is exacting, and the grind is constant. Bryce simply did what everybody else talks of doing—he quit and went home.

HERE: A REAL DRAFT

In Oklahoma City, Bryce was vice president of the Harlow Publishing Corp., and was getting along fine.

But Washington was not to let him escape for long. After the 1952 elections, one of his wartime associates was preparing to move into the White House. General Eisenhower pointed at Bryce as the one man he wanted to handle congressional relations.

Wilton B. (Jerry) Persons caught a plane to Oklahoma City and stayed there until he had Bryce's promise to get ready to join the new President's staff in January 1953.

In 7 years, he again has demonstrated the gifts of which all Washington has become aware. Bryce has had several titles, including Administrative Assistant to the President, and Deputy Assistant to the President for Congressional Affairs.

Titles don't mean as much as his record of performance. Handling as tough a congressional mission as has ever been given a Capitol Hill man, Bryce has turned in a batting average that is incredible.

Brother Bryce gets the nod for the minuteman award this year over a goodly company of patriots, anyone of whom would have honored the award. They, of course, remain unrevealed.

The record of his achievements speaks rather eloquently. But the record does not sparkle as does his personality, which carried many a day for a good cause.

It is not as stout as his fine character, which is the bedrock of every good American's nature.

It does not reflect the polish and deftness of his diplomacy, which turned the tide for us many a time when the issues were shadowy, nor the clarity of his intellect which ofttimes cleared the shadows.

So, the ingredients in our minuteman winner this year include high competence, intellectual stature, diplomacy, personality, and character, and a great many other things which are rather indefinable.

And by our standards those things go into the makeup of a giant among men—the incorruptible patriot. That is ROA's minuteman of 1960.

Secretary Gates Above Politics

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to include the following, and very timely editorial from the Peoria Journal Star:

[From the Peoria Journal Star, Jan. 27, 1960]

REALISM OR POLITICS

Because Defense Secretary Gates appraises our defense setup more optimistically than his predecessor, he was savagely attacked in the Senate and his confirmation held up. Is Gates' rosier view a true one or was it given, as critics say, as a matter of political expediency in election year? We believe there is more honest opinion than politics in Gates' appraisal.

It is true, the Democrats are making an election year issue of Eisenhower defense policy. It has been no secret that they intended to do it. And Ike has been unable to conceal his anger at some of the barbs they have aimed at him. In this situation, it would be natural for the President to fight back, both for political reasons and for personal ones. And an about-face appraisal of our defense position, coming just at the time we have a new man named Defense Chief, might lead to suspicion that Gates had been persuaded to deal loosely with facts.

But that view does not take the character of Mr. Gates into account. He is not a politician. He has a fine record as a public servant. He is a man of integrity. There is no reason to believe that he would give a false picture of defense for political purposes.

He could be wrong. Any man may be. But we believe his honest opinion of our defense position has been given. Maybe his predecessor was wrong.

It is much more likely that the politicians in the Senate who are making campaign material of their quarrel with Gates are dealing loosely with facts.

And we repeat what this column asserted a few days ago; namely, that making a campaign issue of defense is going to confuse many people. No one but our enemies will gain from it.

The High Cost of Medicines

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. HARTKE. Mr. President, the New York Times recently in an editorial discussed the hearings which the Senate Subcommittee on Antitrust and Monopoly has been conducting under the chairmanship of the Senator from Tennessee [Senator KEFAUVER]. This investigation has stirred up a great deal of interest.

The editorial points out that no industry more directly affects the public health and welfare than the drug industry. It is for this reason, the editorial states, that the task of the Kefauver subcommittee is important.

We are all, I am sure, interested in seeing that the work of the subcommittee continues so as to give all interested parties an opportunity to be heard. I am confident that the final results will be in the best interests of the drug industry and the public.

Mr. President, I ask unanimous consent that the editorial from the New York Times of February 1, 1960, entitled "The High Cost of Medicine" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HIGH COST OF MEDICINES

The price of medicines is high and getting higher, as almost everyone knows. So high is it, in fact, and so great is the demand for drugs that the people of the United States now pay more for them and medical appliances than they do for the services of doctors. No wonder the investigation of the drug industry by the subcommittee headed by Senator KEFAUVER has stirred up such wide interest.

The most impressive defense of high prices brought out in the hearings so far has been the high cost of the research necessary to produce the new medicines, increasingly in demand as medical science breaks ever more new ground. But less evidence had been given up to this week as to other costs, such as advertising, promotion, and sales. One of the recent hearings, however, threw sharp light on all these matters by spreading on the record the experience of one of the Nation's leading companies—especially in regard to a well-known tranquilizer.

This drug was originally produced by a French concern. The American company was given exclusive rights to its production and sale in this country. Comparative price figures given by the subcommittee staff were striking, especially in view of the fact that the American company did not finance the basic research. Fifty tablets cost the druggist in Paris 51 cents. In the United States the same tablets cost $3.03.

The company's record illuminates what the public wants to know: Why drugs cost the consumer as much as they do, whether company costs could be reduced and whether prices couldn't be much lower than they are without depriving the drug firms of a reasonable profit. Then, too, there is the question of whether some sort of Government regulation may be necessary to assure all of us who buy medicines that we can get what we need at the lowest possible price. Certainly no industry more directly affects the public health and welfare than this. The task of the Kefauver group is correspondingly important.

The Real Gap

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. McCORMACK. Mr. Speaker, in the extension of my remarks I include an analytical article: "The Real Gap," written by Walter Lippmann, which appeared in the Washington Post on February 2, 1960.

Among other things Mr. Lippmann well said in his article:

Great peoples can be put to sleep. This can be done if the peoples' leaders tell them to go to sleep, and not listen to those disturbers of their tranquillity who tell them to turn away from the little things and to worry about the big ones.

How true.

The article follows:

THE REAL GAP

(By Walter Lippmann)

The big controversy about defense arises from the fact, which nobody denies, that the Soviet Union is several years ahead of us in the production of missiles and in the exploration of outer space. The Russians have more missiles. They have bigger missiles capable of carrying bigger loads. And judging by such fabulous exploits as directing a satellite to photograph the other side of the moon, they are far ahead in the whole art of the guidance of missiles.

The controversy in Washington is about the consequences and the remedies, given the fact that we have fallen behind in the race of armaments. In this controversy there are several points. The first, and obviously the most immediately important, is whether the Soviet Union's lead in missiles is such that the Russians are on the verge of achieving decisive military superiority. By decisive military superiority is meant the power to attack without suffering serious retaliation.

In theory, the Soviet Union will have this decisive superiority within the next 2 years—if we do nothing more to offset it than we are now planning to do—if it has 150 long-range missiles, together with another 150 medium-range missiles, in place, aimed and ready to be launched. In theory, with one salvo of such a missile force the Soviet Union could knock out and destroy all of our retaliatory forces. After that we would be helpless and at the mercy of the Soviet Union.

Those who use this theory in their argument for greater armaments are, like General Power of the Strategic Air Force, quick to add that there are several things that we could do, especially to keep a part of the Strategic Air Force in the air where it cannot be hit by a surprise attack. The existence of such an invulnerable retaliatory force will deter the Soviet Union from using its superior missile force to attempt a nuclear Pearl Harbor.

The administration case, as I understand it, starts from the proposition, which everyone agrees to, that neither side will launch a nuclear offensive if, after the offensive has been struck, the other country still possesses the power to retaliate. The heart of the administration case is that it is not necessary, though it would be desirable, to have an equal number of missiles in order to deter a Pearl Harbor attack. For the aggressor who strikes first cannot afford to attack unless he is able to knock out in one salvo about 100 comparatively small targets. As missiles are not too accurate, this requires a lot of missiles.

But the country which is attacked would not need an equal number of missiles to retaliate because it would not strike against difficult tragets like launching pads. It would strike directly at the biggest cities where, given the fearful widespread effect of the modern weapons, no great accuracy is required.

In order to retain this retaliatory capacity, a smaller striking force is required than the aggressor must have. The administration claims that before the Soviet Union can achieve the theoretical striking force which would give it supremacy over us as we are today, we can and we shall have put beyond the reach of the Soviet missiles a sufficient retaliatory force of missiles, bombers, submarines, etc.

Thanks to the agitation which has been stirred up by the critics, there is good reason to think that the precautionary measures will be taken now, and in sufficient time.

What worries me is the disposition in the administration and in Congress to act as if all would be well if by 1962 or thereabouts we began, as Secretary Gates promises, to overtake the Soviet Union in missiles. To rest on this is to misunderstand and greatly to underestimate the real peril into which we have come.

The peril is that in the race, not only in armanents but in overall national power, the

Soviet Union is moving ahead faster than we are. There is a misconception, so it seems to me, even in high and responsible quarters, that the Soviets are ahead only because they started a few years earlier, and that in a few years we shall be even with them again. The real situation, which is the source of our perils, is that because in this vast field the Soviet Union has gotten its research and development effectively organized, and because the Soviet Union is allocating to it all the resources that it requires, the gap is not becoming narrower, it is becoming wider. Not only did they have a head start but they are now running faster. The administration's specific budget for 1961 may conceivably be adequate but the philosophy behind that budget is deadly and will reduce this counntry to a second-class power.

This does not mean that the Soviet Union will soon or in the foreseeable future achieve decisive military supremacy. I am quite prepared to believe that we shall be able to do what General Power says we must do, that "once we have reached the point where a surprise attack can no longer prevent or even minimize retaliation," we shall have the security of a nuclear stalemate.

But security, though it is crucial, is not sufficient and we cannot be satisfied to accept the position of secondbest.

Perhaps that is wrong. Perhaps we can be satisfied. Perhaps we can be led to believe, what it is so little trouble to believe, that, provided the Soviet Union does not bomb us, we can go right on thinking about ourselves and our private affairs and not about the Nation and its future. Great peoples can be put to sleep. This can be done if the peoples' leaders tell them to go to sleep, and not to listen to those disturbers of their tranquility who tell them to turn away from the little things and to worry about the big ones.

Padre Island National Seashore Proposal

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. YARBOROUGH. Mr. President, it is more than 500 miles from Wichita Falls, Tex., to Corpus Christi, Tex., yet recently the Wichita Falls Times published an editorial urging that the Padre Island National Seashore project be approved by Congress this year.

This editorial is an example of the widespread support—the backing from virtually all areas of the State—which is being advanced for the move to create a national seashore on this 117-mile-long beach island in the Gulf of Mexico just off the Texas coast.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "Park Move Encouraged," from the January 22, 1960, issue of the Wichita Falls Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARK MOVE ENCOURAGED

Encouragement has been given to the movement which would set aside an unblemished part of the gulf coast shoreline of Texas as a national seashore park.

President Eisenhower has asked Congress to let the Government establish three new seashore parks, and although he did not reveal what areas he had in mind it has been learned that the Padre Island project which south Texans have been pushing is one of the three.

Merits of the Padre Island proposal have been discussed in these columns on several occasions. The Times has favored the program and would like to see Congress give its approval this year.

A decision is needed, if not this year then in the immediate future, because commercial developments are already encroaching upon the natural area.

Senator Hennings' Service to Parents

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks, I am including the following editorial from a recent issue of the Daily Dunklin Democrat, published at Kennett, Mo., which recognizes an outstanding service performed by the senior Senator from Missouri, the Honorable THOMAS C. HENNINGS, JR.:

SENATOR HENNINGS' CONTRIBUTION

If suddenly it should be revealed that 59 percent of the students of a junior high school in the Dunklin County area were smoking marijuana regularly, the residents of this area would be astounded and rightfully disturbed.

If it should be revealed that narcotics arrests in Dunklin County showed a sharp increase, particularly in the 14- to 15-year-old age brackets, there would be a loud clamor for public and official action.

Yet, as startling as these disclosures would be, they are no less startling to the parents of the affected children in six major U.S. cities where these conditions actually exist today.

"I have never presided over a congressional hearing where the facts are as sad, shocking, and sickening as these." This was the statement of Missouri's senior U.S. Senator, THOMAS C. HENNINGS, who is chairman of a congressional Juvenile Delinquency Subcommittee which has been hearing testimony throughout the country on facts which link juvenile delinquency to the use of narcotics by teenagers.

The subcommittee has learned, for example, that in the six metropolitan centers of New York, Chicago, Philadelphia, Los Angeles, San Diego, and San Francisco, the use of marijuana is quite popular among both high school students and junior high school students. In Los Angeles, for example, witness after witness told Missourian HENNINGS that a very high percentage of narcotics, chiefly marijuana and heroin, arriving in southern California eventually makes its way to youths under 21 years of age.

If this seems to be a remote problem to parents in southeast Missouri and northeast Arkansas, then consider for just a moment what could occur if a narcotics dealer began operations within this 150,000-population area. Although the sale of marijuana and heroin has never been carried on to any great extent in this area, there have been, from time to time, indications that at least some were being peddled in this area.

Several efforts in recent years by the Treasury Department to trace the sale of narcotics in this area have generally resulted in the cessation of these nefarious activities.

At the present time, the Hennings committee discovered that only a small percentage of the Nation's total youth population was involved in this shameful drug and delinquency problem. Yet as long as the physical and mental well-being of any of our young people is at stake, especially since it is increasing, we must work consistently and in greater numbers to control the evil.

The information revealed by the Hennings committee is especially helpful to all parents, regardless of where they live, in reminding them of the too-available narcotics evils which continue to persist and grow in virtually every section of the country. The absence of narcotics sales today does not mean that it will not begin tomorrow, particularly since the Government seems incapable of coping with the spread of narcotics distribution.

Senator HENNINGS deserves recognition for his work and service to American parents everywhere. What he has revealed has been of real service to every family in the country.

Surprises in Wisconsin Tourist Survey

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. WILEY. Mr. President, in our fast-advancing age—with ever better means of transportation, including an expanding network of highways, airways and waterways, tourism is becoming a highly significant industry.

Of the 54 million families in the United States, about 30 million take at least one vacation trip a year.

Throughout the Nation, tourists spend more than an estimated $20 billion annually.

In Wisconsin, for example, tourism is our third most important industry.

The opening of the St. Lawrence Seaway is expected to bring new visitors to the Great Lakes region. Particularly, we, in Wisconsin, are anticipating an influx of visitors—via the seaway—from elsewhere in the United States, Canada, and other lands of the world, to enjoy the scenic, historical, picturesque vacationlands in Wisconsin.

Effectively utilized, vacations can prove to be not just escapism; rather they furnish the individual and the American family an opportunity for physical, mental, and spiritual revitalization.

In planning to accommodate the increasing number of vacationers in the future, the Nation, I believe, could well afford to undertake, and benefit from, imaginative efforts to make vacation time not only one of leisure, but also one of educational and inspirational value.

Recognizing the increasing economic importance of tourism, a special survey

is being conducted in my home State by the University of Wisconsin, under the direction of Dr. I. V. Fine. The purpose of the survey is to make a reevaluation of the current scope of the tourist industry, as well as to provide data upon which to build a better program for the future.

A recent edition of the Milwaukee Journal carried a detailed article on the progress of the survey. Reflecting a constructive approach to utilizing the potential of a growing industry, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Jan. 31, 1960]

SURPRISES IN WISCONSIN TOURIST SURVEY—EARLY RESULTS INDICATE OWNERS OF COTTAGES MEAN $50 MILLION TO STATE'S RECREATION INDUSTRY; AVERAGE INCOME OF CAMPERS IS $7,000 A YEAR; BETTER FACILITIES NEEDED

(By Paul M. McMahon)

MADISON, WIS.—Wisconsin has 50,000 privately owned vacation cottages which represent a $50 million segment of the State's tourist industry.

This is the most surprising of early discoveries in the $25,000 survey of the Wisconsin tourist industry ordered by the Wisconsin Legislature, according to Dr. I. V. Fine, University of Wisconsin professor. He is in charge of the survey.

Cottage owners spend an average of $1,000 a year on such items as taxes, improvements, food, gasoline, and recreation in connection with their vacation cottages, Dr. Fine said.

"We had not expected to find the cottage owner such an important part of the Wisconsin vacation picture," Dr. Fine said Saturday. "Most of the cottages are owned by Wisconsin residents, with Illinois owners second in number. Surprising is that Florida owners are the sixth largest group."

OTHER HIGHLIGHTS

Because cottage owners usually spend a longer time vacationing than do those in rental facilities, and because of the taxes they pay and purchases they make, their total contribution to the State's income is significant, Fine said.

Among other points which Fine said had developed in early phases of the survey are these:

About 24 percent of those residents of the Greater Chicago area who take a vacation spend at least part of it in Wisconsin.

Vacationists who camp in Wisconsin are not poor folks. The average income of the head of the family is about $7,000. The camper spends as much money on equipment after he gets on his trip as he does for almost any other item. There is no doubt that Wisconsin lacks facilities for adequately handling its volume of campers.

Boys and girls who attend summer camps in Wisconsin represent a $5 million business, including what parents spend visiting them. Wisconsin is a natural area for serving juvenile campers from Chicago and other nearby urban districts but inadequate rail service is a handicap.

Dr. Fine is using University of Wisconsin students in some of his survey projects. He said he took a team of 50 students in marketing research classes to Chicago where they completed 4,000 telephone calls to residents of the central city and suburban areas. The results were so satisfactory that a similar project will be carried out in Minneapolis-St. Paul.

PLAN 51,000 CONTACTS

In the course of the survey, Fine expects to make 51,000 contacts through questionnaires, telephones or personal interviews. Replies to questionnaires are running 45 percent, an exceptionally high rate for a survey, Fine said. He believes that the prestige of the University of Wisconsin is partly responsible for this cooperation.

Fine had high praise for the assistance given him by public utilities in Wisconsin. They have provided him with the names of more than 40,000 seasonal users in the State, a major contribution in determining the importance of cottage owners.

Few tabulations have been completed in the survey. Fine expects, however, that he soon can provide the first of a series of reports covering various aspects of the survey as they are finished. He hopes to have the survey completed, with results and conclusions by early 1961.

Under terms of the State legislation, the survey is being conducted by the bureau of business research of the School of Commerce of the University of Wisconsin at Madison. The survey was set in motion by Dr. Fine and Prof. Edward E. Werner, but Werner left recently on a temporary teaching assignment in Indonesia.

THEME OF SURVEY

The main concern of the project, Fine said, centers around a measurement of the economic significance of the recreational tourist industry in Wisconsin. The survey will attempt to discover the number of persons who visit the State, how much they spend, the recreational facilities in Wisconsin which attract tourists, the adequacy of vacation facilities and a comparison of Wisconsin's efforts to lure tourists with the efforts of other States.

Fine expressed a deep interest in the vacations spent by Wisconsin residents within their own State. The instate tourist potential may prove so great that more promotional effort should be directed toward it, Fine observed.

TRAVEL COURSE BEGINS AT MU

Miss Frederique Fredge, a freelance writer and native of Switzerland, will conduct a 10-week illustrated lecture series at Marquette University on the topic of Americans abroad.

Beginning February 18, the Thursday evening lectures will be offered by the Marquette department of continuing education. Classes will meet from 7 to 8:15 p.m. in Carpenter Hall, 617 N. 13th Street.

An experienced international traveler, Miss Fredge will speak on Scandinavia, Holland, Germany, Austria, Italy, France, England, Spain, and Portugal. In her talks she hopes to provide a blueprint of what every tourist should not do in order to enjoy a European vacation.

The Dignity of Teaching: Address by Charles H. Silver

EXTENSION OF REMARKS

OF

HON. LUDWIG TELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. TELLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of a speech delivered on November 21, 1959, in New York City at the annual lunch of the Protestant Teachers Association by Charles H. Silver, president of the New York City Board of Education.

Mr. Silver is one of New York City's great citizens. His distinguished record of community activities has won for him nationwide renown.

In his address Mr. Silver points out the importance of protecting the dignity of teaching, increasing the salaries of teachers, and using the talents of teachers as an instrument for developing juvenile decency.

The address follows:

ADDRESS BY CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT THE ANNUAL LUNCHEON, PROTESTANT TEACHERS ASSOCIATION, NOVEMBER 21, 1959, HOTEL ASTOR

It does not seem possible that 2 whole years have passed since I last had the privilege of appearing at your annual luncheon to bring you the greetings and good wishes of your entire board of education.

If ever a span of time spun past in a whirlwind of events, it was these last 2 years of adjustment to the quickening pace of a nuclear age. They have changed the world more thoroughly and swiftly than any other period in the stumbling cavalcade of civilization.

We will not soon forget how a little speck of matter flung into the reaches of the firmament became an aggravating cinder in the eye of education. Today, when the whole sky seems cluttered up with these temporary stars, we still remember how the first cosmic invader shook every citadel of learning within the borders of democracy.

Our educational concept stood in doubt and our reverence for the humanities in jeopardy. We trembled in an agony of self-criticism * * * and I am sure that many students trembled even more with visions of impossible programs, all day school, and no summer vacation.

Well, the panic has passed, and we may consider the problem with concern, but with calm. As we do so, I am proud to have the privilege of breaking bread again with the officers and members of the Protestant Teachers Association, and with your distinguished guests, Dr. Peale, Dr. Potter, and my old friend, Dr. Jansen.

Because the cornerstone of your organization is the devotion you share toward a common form of worship, I feel that my mission in coming before you is not to bear a message concerning the things of the world that change. Rather, I would speak of things beyond the world and beyond change.

We have come to know that the American system of education is strong because it is unregimented and unfettered. Thus, it is flexibe enough to meet any onslaught, free enough to forge its own national destiny in any contest to determine intellectual supremacy. Now that we have had opportunity to assess our position, we know that, basically, our schools are good, and, joined together in the service of humanity, we will find the way to make them even better. Your calling as teachers is ennobled, in this effort, by the warm bond of faith which brings added zeal and dedication to the routine tasks of the classrooms.

Yours is an enormous responsibility that goes beyond the limits of a lesson plan. No text in our methods of teaching can instruct a young heart and mind in the sanctity of life or the meaning of right and wrong without the influence of the teacher as the living symbol of these noble principles.

In our homes, our schools and our places of worship, we must launch a crusade for the inculcation in our children of new standards of juvenile decency. Their path as part of the future brotherhood of man * * * indeed, the whole hope of mankind is largely in your hands as teachers.

The indecency of much current literature, the vulgarity on sale at the corner news-

stand and the boldness of some programs on radio, television, and the motion picture screen * * * these pose a challenge which you, as teachers, must meet. Ethics and character, our precious heritage of liberty under the law, justice and equality of race, color, and creed * * * none of these can be conveyed effectively, solely by text or phrase.

But they can be transmitted through a kind of spiritual osmosis in the wonderful relationship that can be created with a pupil by an understanding teacher—a teacher who not only knows and instructs—a teacher who cares, a teacher who believes in and lives by the high standards around which we have molded our educational process.

The deplorable linking of the current television quiz-show scandal with certain education idols and, indirectly, with the very ideals of education, may cast a momentary shadow, in some quarters, on the high motives of learning. But I am confident that the moral fibers of America are strong, and the love of learning for its own sake cannot be destroyed by any dishonorable dollar challenge from detractors and perverters. Those who sought to sell their wares have learned the hardest lesson of all.

All of this is part of the educator's burden in these troubled hours, and it is a burden which merits adequate compensation. Recently, at the Alfred E. Smith memorial dinner, in the presence of Governor Rockefeller, Mayor Wagner, and other members of the board of estimate, I emphasized the importance of increasing the rewards of teaching, and pointed out the dire need for higher salaries.

This subject always touches a tender nerve, but we should not permit it to become an inflamed one. I have served your cause long enough to know that the emergency treatment or temporary cure will not suffice.

I have submitted a set of proposals to the members of the board of education and to the superintendent of schools which, I hope, will provide us with a starting point for salary discussions. We need to know, not only our goals for the immediate future, but what salary patterns we can set for long-range guidance.

The dignity of teaching and the respect due your profession must not be impaired by unprofessional and indignant demonstrations each time the cost of living index takes another jump. I hope to see anything resembling recurring wrangling—yes, and any reason for it, as well—eliminated by a just and equitable long-term program of improved earnings instituted for every teacher in our public school system.

You are entitled to no less, because you are proving your worth each day in the classroom, and I am only echoing the pride of our entire city administration and every member of our community in the great work you are doing to mold the minds and moral development of our young people.

We, the community, must serve you who are the servers of youth, as this Nation, indeed the world, focuses on the men and women of tomorrow. With a Bill of Rights for Youth emerging from the United Nations and proclaiming "that mankind owes to the child the best it has to give," your daily lesson assumes its true significance in the patterns of history.

It is a lesson in which you guide the gaze of youth to dimensions beyond the shallow depth of a television screen, or the narrow pages of sordid print, or the confines of callous indifference. It is one in which you set their sights on the changeless stars and the ancient teachings which are ever new * * * on the ageless source of all strength who has fashioned us in His image as creatures who seek truth and knowledge, peace and justice * * * and the enduring blessings of wisdom and understanding, as we walk humbly in the way of the Eternal Teacher.

Military Pay

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter of great interest on the subject of the relationship between active duty pay and retired pay, which has come from Attorney Albert F. Block of Davenport, Iowa, a personal friend who holds an outstanding record as a naval officer.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DAVENPORT, IOWA, *January 20, 1960.*
Senator THOS. E. MARTIN,
459 Senate Office Building,
Washington, D.C.

DEAR TOM: There are several bills, now in committee as I understand the situation, to reestablish the traditional relationship between active duty pay and retired pay. Last session Senator STENNIS spoke in opposition to these bills. I wish you would see him about this and persuade him to change his mind.

It is certain that he does not know the story or he would not think the way he does. Neither do I know the story from the Army viewpoint. I have to tell it from the Navy side. But I do not want you or him or anyone else to accept my statements of fact. Please verify them from other sources which are at your disposal.

This Nation has a historic policy that, after each war the outstanding warriors have been rewarded with something tangible. Only one of them could be president. Therefore, in 1870, Admiral Farragut was paid $10,000 and in 1872 Admiral Porter was paid $13,000. In 1920 John Soller, father of the John H. Soller who built the Masonic Temple in Davenport, told me that he well remembered the day on the first day of January, 1872, when carpenters' pay in this town was first raised to $1 a day.

By 1899 the retirement pay device had crept into military pay so that Admiral Dewey got $13,500 plus $500 allowances. For how many years did a captain in the Navy have the same basic pay as a member of the Congress, with longevity increments for the captain? And, when the armed forces asked pay increases, how many congressional denials were based on the retirement pay?

They told us that we would be retired with pay amounting to 2½ percent of the highest grade we might attain for each year of service, increased as officers of the same grade were increased and, second, that, while the Congress had the right to change this, we could have faith in them and that it would never be done. Do you know what effect that 6 percent increase had on our faith in the Congress? And their government bonds? Same as an earthquake.

Oh, I know the law that one Congress cannot bind the next and that on that account one cannot enter into a contract with the Honorable the Government of the United States but these United States teach the midshipmen and cadets that in their chosen profession as warriors they must be the soul of honor, must never distort the truth in any degree, must perform not only their contracts but also their promises to the letter and that the honor of the Nation they are engaging to defend is the example they must follow.

The simple truth is that this retirement pay got into the law as a clever device to avoid paying these officers what they were worth and now they have cut down the retirement pay. If they want to pay these officers what they are worth, they should multiply Admiral Porter's pay by 16. Or Admiral Dewey's by five. Consider today's price of what could be bought for a nickel in his day—a loaf of bread, a quart of milk, a piece of pie, a ham sandwich, a shoe shine, a streetcar ride, a ferryboat ride. Or take the title A cost of today's fleet compared with the cost of Admiral Dewey's fleet and use that for a multiplier.

It is conceded that I am one of the officers entitled to pay. What other class of people knows what has happened?

Herewith a spare copy of this letter for your convenience. You can either give it to Senator STENNIS or print it in the record.

Best regards.
Sincerely,
ALBERT F. BLOCK,
Captain, U.S. Naval Reserve, Retired.

Forand Bill, H.R. 4700, Prompts Blue Shield Action

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. FORAND. Mr. Speaker, my bill H.R. 4700, now pending in the Ways and Means Committee, has seemed to focus attention on the need for health insurance for the aged. It has not only stimulated thinking but it has also resulted in real study of the problem by groups that should long ago have taken steps to meet the grave problem that exists among the aged.

I am happy to insert in the RECORD, as a part of my remarks, an article that appeared in the January issue of the magazine New York Medicine published by the Medical Society of the County of New York.

The article is entitled "Blue Shield's Future—And Medicine" pointing out that at its meeting, now being held in Chicago, Blue Shield's goal is to explain and review the problems of the Blue Shield plans in various regions of the Nation.

The article further says that "With the Forand-type legislation in Congress the drive is on to enroll more persons over age 65 in medical care plans. All Blue Shield plans have been urged to experiment in this area—easing enrollment requirements and broadening benefits. Much has been done but progress is spotty across the Nation. In fairness be it said, it is the reluctance of lo-

cal medical societies to go along that creates the spotty picture."

The article follows:

BLUE SHIELD'S FUTURE—AND MEDICINE

On February 1–3, 1960, in Chicago the Blue Shield plans across the Nation will hold their annual meeting for physicians and the administrators of the State and local county medical societies. The goal is to explain and review the problems of the Blue Shield plans in the various regions of the Nation to bring about cooperative effort to make Blue Shield better. A second goal is to convey information to the medical societies so that relations between Blue Shield and the physicians of a community can be enhanced.

By coincidence the meetings are held at a crucial time for problems are indeed pressing.

1. With Forand-type legislation in Congress the drive is on to enroll more persons over age 65 years in medical care plans. All Blue Shield plans have been urged to experiment in this area—easing enrollment requirements and broadening benefits. Much has been done but progress is spotty across the Nation. In fairness be it said, it is the reluctance of local medical societies to go along that creates the spotty picture. One can still find some physicians arguing that there is no problem; that anyone over 65 can get medical care through welfare departments if they need it. The reality is that if local medical communities and their affiliated Blue Shield plans do not expand their over-65-year coverage then someone is going to do it for them, with Mr. Forand ready in the wings to capitalize on the inertia and see that Government does it.

2. There is a strong need for some type of nationwide Blue Shield coverage that has similar benefits and premiums in different areas. Proposals to cover Federal Government employees in Blue Shield are bottlenecked because coverage varies widely from area to area. The same applies to the large national employers among the great corporations. They need a type of Blue Shield plan that will permit their employees to be transferred or shifted from one area to another without rewriting contracts, changing rates and revising countless other variations. Such uniformity can be achieved only if local Blue Shield plans and the local area medical societies that endorse and support them can come to some understanding in these matters. The time is at hand to look beyond the boundaries of one's town or one's region to the Nation as a whole.

3. Inherent in point No. 2 above is the dilemma which faces the 70-odd Blue Shield plans in the Nation. Of necessity they have come up with 70 variations of coverage. One of the sharpest differences is that some plans have the service feature in which the coverage pays all the medical cost if the patient is under the agreed-upon income bracket for service benefits. Here in New York this means $6,000 per year for the family income. Yet in other parts of the Nation Blue Shield pays only on an indemnity basis according to the fee schedule: The physician charges what he wishes and the Blue Shield pays part of the fee. In this situation Blue Shield is no different than the commercial insurance companies which do the same thing.

This chaotic situation, one should emphasize, is not the fault of the Blue Shield plans but the decision of the doctors locally in a community as to the type of Blue Shield coverage they will support. Local autonomy is the rule and the doctors of the local medical society have the final say.

This leads on to a point which all thinking physicians should contemplate and which explains many of the headaches which the profession encounters today. It is this:

Today labor, management and Government are powerful because they are national in scope. They have learned that piecemeal decisions, varying from region to region or community to community bring differences and disunity and the weakness of splinter-type thinking and action. Unfortunately medicine still is in this stage of thinking about the servicing and payment of medical care.

In a former era when labor was unorganized nationally, and manageemnt was unorganized nationally, and the government rested more on local cities and States than upon Federal Government the position of medicine in a community was very high. It was well organized at the local level (indeed better than labor and management in its community) and thus it had power, prestige and respect locally.

But the times have changed and while the local medical societies still demand this local power and autonomy the thinking of management and labor has passed them by. It is labor and management together that now control vast sums of money which are earmarked for medical care. It is management and labor which now can call the shots on how medical care is rendered and paid for. It is not the question of the quality of medical care and the clinical side of medicine—where the physician alone is rightly supreme. It is rather the socioeconomics of the matter where the physicians and the medical societies are only one of four facets (a) labor—supplying the patients, (b) management—supplying the money to finance the medical care, and (c) the public, the community (which means government) supplying the controls, if need be, to see that the job is done.

This is the problem (and this is the reason for the problem though it may not be discussed so bluntly) which faces the coming meeting of the Blue Shield plans when they gather in Chicago next month.

Every local county medical society (some 1,600 of them) and every physician member of a local medical society (some 160,000 of them) will be sitting figuratively on the sidelines at the Chicago meeting. Few societies will be represented—though their presence would be welcomed—but every medical society should know that how it reacts to Blue Shield plans affects the status of every physician across the Nation.

Banish Poverty From America

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. HUMPHREY. Mr. President, it was my special privilege on January 25 to address the Legislature of the State of West Virginia in their legislative chamber at Charleston, W. Va. I ask unanimous consent that my address be printed in the Appendix of the RECORD. There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR HUBERT H. HUMPHREY BEFORE THE WEST VIRGINIA STATE LEGISLATURE, CHARLESTON, W. VA., JANUARY 25, 1960

The fact that the West Virginia Legislature is grappling with questions of supplying food for the hungry and other welfare measures points up the bitter fact that the prosperity we hear so much about is certainly not a general prosperity.

There are to many distressed areas in this country—too many pockets of depression and despair—for any American to feel complacent about our national strength.

We have a huge unfinished job in the United States. That is the job of providing economic security for all our people.

I want to talk to you about one aspect of this general problem—the job of eliminating once and for all the disgraceful amount of actual poverty and economic stagnation that still exists in this richest land in the world.

Poverty is always a tragedy, any time and any place. But poverty in a land that is enjoying a national product close to $500 billion is more than a tragedy—it is a national scandal.

According to official government figures, there were in 1957 no less than 11 million families—families, mind you, with total family incomes of less than $3,000 a year—less than $58 a week. Six million of these families had incomes actually less than $2,000 a year—less than $39 a week. In addition, there were about 5 million persons living alone whose income were under $1,500 a year—under $29 a week.

These are the almost 50 million poor people living in America in the middle of the 20th century.

The test of our progress is not whether we provide more for those who have enough; the test of our progress is whether we provide enough for those who have too little. The existence of 50 million poor people in our midst is sad evidence that we have so much more to do.

There is no single, simple solution to the problem of poverty. Just as there is no single, simple cause of poverty. It must be attacked on every front.

What are some of these fronts?

One vital front concerns the aged. Their problems constitute one of the most crucial battlegrounds. For too many years now we have been authorizing one study after another, holding one conference after another, making one speech after another, about the problems of the aged. The time has come to act.

In addition to many other things, Congress must pass a measure which will provide hospitalization and nursing home care and other services for our elderly people as a matter of earned benefits under our social security law. We must forge ahead on medical research. The dread disease of cancer must be conquered.

What about the wage earner? After all most of the low income families are headed by wage earners. It is clear that the greatest hope for eliminating poverty is regular employment at decent wages for America's wage earners.

That means a number of things.

It means making it easier, not harder, for unions to organize the unorganized and bring them the economic benefits of collective bargaining.

It means raising the Federal minimum wage at once to at least $1.25—and, even more importantly—extending the coverage of the Fair Labor Standards Act to millions not now covered.

It means at long last doing something about the 1 million migrant farm workers, who, on the average, work less than 150 days a year—and these at miserable wages and under disgraceful conditions of housing, transportation, and child labor.

It means restoring the economic health of dozens of chronically depressed areas. I am sure you share the bitter regret that the President vetoed the distressed areas bill, as well as another bill that has so much meaning for your State—the Coal Research bill.

This area redevelopment or distressed areas legislation would provide two badly needed

programs—one to retrain unemployed workers to take new kinds of jobs in industry, and the other to encourage new industry to establish itself in the distressed areas through long-term, low-interest Government financing.

There is even more that the Federal and State Governments can do together. Let me outline some of the other basic features of a program to provide for area redevelopment.

I propose that Government undertake broad programs for the restoration of basic health to the distressed areas, such as:

1. The concentration of authorized public works programs designed to lay the base for greatly expanded future productivity of the areas—to provide more efficient transportation facilities, more and cheaper power sources, better school buildings and laboratories, and greatly expanded timber management practices, in appropriate areas.

Such public works projects would also act as immediate stimulants in the area by providing additional jobs for workers and markets for businessmen in the area.

2. Intensified Government-financed research into the ways of making greater use of the raw materials and natural resources of the distressed areas, and to find additional outlets for existing industry and new outlets for the latent wealth of the area.

3. The immediate consideration by the Federal Government of an export subsidy on coal where foreign competition and cutrate prices injure American producers and shippers.

4. A determined effort to find greater uses for our vast coal resources in our foreign aid program, particularly to the underdeveloped countries that are beginning their industrialized programs.

Ending economic distress and expanding our economy also means bringing our unemployment insurance system up to date, so that wage earners do not become paupers when deprived of work through no fault of their own. More than one of every three unemployed in 1958 received no unemployment insurance, and millions exhausted the inadequate benefits to which they were entitled.

Ending economic distress means eliminating discrimination in employment which all too often keeps Negroes and other minority groups from obtaining jobs which their talent and training entitles them to.

It means improving the skills and education of workers unable to meet the needs of a rapidly changing technology.

All of these things, and more, must be done to give Americans a better chance to lead dignified lives of gainful employment.

I have spoken many times—and will again—on the plight of the American farm family. I wish today merely to place this issue in the context of the basic theme of this address. Certainly, the curse of poverty can never be eliminated from America unless we do justice to the family farmers of our Nation who have given us the tremendous abundance of food and fiber.

Through my Family Farm Program Development Act, I have proposed legislation which will provide a measure of security for our farm families and will at the same time better utilize our food and fiber products as a powerful force for peace and world economic development.

Our primary goal must be decent wages or other private income for every American family or individual. But there will always be some families without breadwinners. And there will always be individuals unable to provide for themselves.

It was Isaiah who called upon us "to do well; relieve the oppressed; judge the fatherless; plead for the widow."

It saddens me to find America failing to do all it should, all it could.

Last year over 5 million Americans received some quantities of surplus food from our bulging warehouses. But under this administration, the law has been administered so that only those commodities in super-abundant supply have been made available for these direct distributions of food for the needy.

Cornmeal, dried skim milk, and flour are all wonderful commodities—but should an American child be expected to live on these alone?

As chairman of an agriculture subcommittee, I held hearings last year on measures which would have made grants to localities for distribution of these foods and many others to families and communities in need.

It distressed me, as it should all America, that the White House opposed these improvements. Why? Because it was claimed that it would unbalance the budget. But is the budget purely a matter of dollars? Is there no room on the balance scale for human needs or feelings?

Despite administration opposition, we did get through the Congress a modest food-stamp program. But already Mr. Benson has announced that he does not intend to put that program into effect.

In addition to alleviating those suffering from poverty today, we must seek to eliminate those factors that tend to perpetuate economic distress.

We must provide adequate education for every child. This means new classrooms, more and better trained and paid teachers, scholarships, and improved curriculum.

We must have a housing program big enough for a growing America—housing for all—slum clearance—clean and modern neighborhoods.

We must bring the blessings of medical progress to all our people—more and better hospitals—and adequate supply of doctors, nurses and technicians.

I have merely touched on some of the obligations of our society in this basic area in the midst of our so-called prosperous society.

We must not be fooled by slogans. We must face up to the facts of life as we find them, and then organize ourselves and all our resources for the job I have outlined today.

For I ask you: How can we bring peace to the world, how can we maintain our moral and spiritual leadership in the world, if we fail to demonstrate a capacity for taking care of our own people—their needs, their hopes, their very lives?

Norman A. Cocke, Man of the South for 1959

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. ERVIN. Mr. President, Col. Hubert F. Lee of Decatur, Ga., who is well known in business circles throughout the Nation as the editor and publisher of the Dixie Business, initiated the Man of the South Award, which is bestowed each year upon the resident of the South who in the estimation of his colleagues has made the most signal contributions to the industrial, educational, and religious life of the South. This honor was bestowed upon Norman A. Cocke, the retiring president of the Duke Power Co., for the year 1959 at the meeting held in Mr. Cocke's home city, Charlotte, N.C., on the evening of December 14, 1959. The toastmaster at the meeting was John C. Whitaker, the retiring president of the R. J. Reynolds Tobacco Co., and the speakers were Mr. Louis V. Sutton, president of the Carolina Power & Light Co.; Dr. Hollis Edens, president of Duke University; Rev. Thom Blair, a distinguished clergyman of the Episcopal Church; and Mr. Reuben B. Robertson, Sr., chairman of the board of the Champion Paper & Fibre Co. I had the privilege of presenting the award to Mr. Cocke on that occasion. The speeches of Mr. Sutton, Dr. Edens, Reverend Blair, and Mr. Robertson are all worthy of preservation because they summed up varying aspects of Mr. Cocke's great contributions to the industrial, educational, and religious life of the Carolinas in particular, and the South in general. The only copy of these speeches now available to me is that delivered by Louis V. Sutton, who spoke on the contributions of Mr. Cocke as an industrialist.

I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

NORMAN COCKE, AN INDUSTRIALIST

(By Louis V. Sutton)

Mr. Chairman, Senator ERVIN, friends and admirers of Norman Atwater Cocke, it is a distinct pleasure and privilege to appear this evening to honor my very good friend and to attest to his outstanding ability as one of our great utility executives and business leaders. As a young man he grew up at Petersburg, Va. Norman's father, a distinguished lawyer, lived on a large farm in Prince George County just outside the city of Petersburg. Incidentally, some of the fiercest fighting of the Civil War occurred on this farm around the Confederate forts called Fort Hell and Fort Damnation. The armies were engaged here for some 18 months. Many of you have heard of the Battle of the Crater, which was waged nearby.

Both Norman and I attended Petersburg Academy founded by that fiery Confederate officer, Gordon McCabe, Jr., whose name the academy bore until after his death. During my last year there my deskmate was Norman's younger brother, Aleck. Many times I went hunting with Aleck on his father's farm and in addition to birds usually found many lead bullets around the old forts and breastworks on the farm.

Like his father, Norman studied law. He graduated from the New York Law School—was admitted to the New York Bar in 1906, and practiced law in New York City briefly before coming to Charlotte.

On November 12, 1906, Norman Cocke started with the Southern Power Co., predecessor of the Duke Power Co., as an attorney. Since then he has seen his company's business grow and expand until it is now 500 times as large as it was then—from a few customers including several cotton mills, to more than 700,000 customers; from a power output of 25 million kilowatt-hours per annum to 12½ billion kilowatt-hours for the past 12 months' period. The rate paid by residential and farm customers has been reduced from around 15 cents per kilowatt-hour to an average of about 2 cents per kilowatt-hour.

He also has seen his company become, under his guidance and direction, one of the great privately owned electric utilities of our country; an institution that has played a vital role in the great development of the Piedmont section of the two Carolinas.

Norman's outstanding accomplishments as an industrial and utility leader and executive cannot be told briefly and I shall men-

tion only a few high points. He started as an attorney for Southern Power Co. and for Mr. James B. Duke. He later became a vice president of Duke Power Co., a director, the general counsel, and finally the president. He was also an officer or director of 17 other companies affiliated with the Duke system as well as many industrial and textile enterprises.

It has been said that during the some 25 years that the Southern Power Co. of which Mr. J. B. Duke was president and Norman Cocke was an officer, the company never incurred any debt, never borrowed any money, and never paid any dividends. All earnings were plowed back into the company. The president, Mr. Duke, worked without pay or reimbursement of his expenses. During the more than half a century the Southern and Duke Power Cos. planned and built wisely into the present-day, magnificent company.

When the four major power companies in the two Carolinas and Virginia organized the Carolinas Virginia Nuclear Power Associates in 1956 for the purpose of constructing the first nuclear fuel generating plant in the Southeast, Norman Cocke became the first president as well as member of its board of directors. About the same time he was elected to the board of directors of the Edison Electric Institute, the trade organization of the electric utility industry whose membership includes practically every major privately owned electric utility company in the United States.

It has been my good fortune, during the past 25 years that I have been back in Carolina, to have Norman Cocke as a close friend and neighbor, whose counsel I frequently sought. Our two companies have the privilege, as well as the responsibility, of serving the major portion of the two Carolinas—a truly wonderful section of our country. It is needless for me to remind you of Norman's personal integrity and of the high esteem in which he is held by everyone, and the lovable personality which rightly qualifies him for the title of a true southern gentleman. In addition, I can bear witness to his excellent judgment, ability, soundness, and leadership. It has been a great pleasure to be associated with and to work with Norman. He has been most helpful and cooperative at all times.

In addition to our business and work, we have had a number of most pleasant sociable trips together. The last was our recent trip to Europe with the Governor, when Norman's most charming, lovely wife—whom I had the privilege of knowing in Petersburg before she became Mrs. Cocke—asked me to look after Norman and said she was entrusting him to my tender care. Needless to say I found this not too difficult but most enjoyable.

Despite his preoccupation with the management of a large, farflung business and many smaller ones, he always demonstrates a warmth of nature which is a comfort to his friends and family. As a personal salute to Norman Cocke, I would borrow from the Bard of Avon, to say:

"His life is gentle, and the elements so mixed in him that nature might stand up and say to all the world: This is a man."

Policies for the Sixties

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that excerpts from a spech I made to the National Press Club on January 5, 1960, in Washington, D.C., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLICIES FOR THE SIXTIES

(By Senator HUBERT H. HUMPHREY, Democrat, Minnesota)

Today, I don't want to discuss politics, 1960. I wish to talk about policies for the sixties.

As we enter the 1960's, I see America adrift—with much of her enormous reservoir of energy, power, and good will untapped—unused.

There are powerful currents in the world today, but they are not currents of our making or liking. They are currents that sweep us along. We are the victim, not the shaper of events.

Just four decades ago, at the dawn of the 1920's, America entered upon the "age of normalcy."

Thirty-three years later, in 1953, America entered a new era: The "age of complacency."

A profound change came over the American Government. The decision was made to confine the solutions to the problems of the 1950's within rigid, artificial, budgetary walls.

That change did much to shape the remainder of the 50's.

It set in motion a unilateral cut-back of America's defense forces—with the result that we embark on the summit talks of the 1960's not militarily supreme, but second-best in a variety of fields.

"A bigger bang for a buck" was the slogan designed to justify the stripping of our conventional military strength. "Massive retaliation" was used to comfort Americans who sensed, but were never told, that the power of the Soviet Union was growing ever more complex and subtle.

1953 marked the beginning of an era in which programs and solutions were not measured against the size of the problems to be solved, but were tailored to fit the economic strait jacket we had designed for ourselves.

The foreign aid program fell victim to the fixed-budget philosophy as the Secretary of the Treasury became a controlling voice in the fashioning of our foreign policy. We appeared to the world to become a Nation that cared more for dollars than for human welfare.

In the name of "fiscal responsibility," an administration that knew the cost of everything and the value of nothing shattered the great pattern of American world leadership.

Here at home during the fifties, the number of school children grew faster than the classrooms, but there was no money for school rooms or teachers in the budgetary strait jacket.

Streams grew more polluted, cities more crowded, slums more squalid, but America, in her fiscal straitjacket, could at best attack these problems only half-heartedly.

The problems of automation, of urban living, and the technological revolution in agriculture were neglected and shunted aside.

The population grew, the problems multiplied, but the budget remained fixed.

Slogans were substituted for programs.

Public relations replaced public service.

And these policies of slogan and slow-down have cost us dearly. The next President of the United States is going to inherit a series of problems that have been swept under the rug—where they have been festering and intensifying. Some one—the American people ultimately—must pay the price of this ostrich-like attitude. And it will be a price that has been accumulating compound interest.

We will hear much talk about peace and prosperity in the months ahead.

We all want prosperity. But the prosperity we want must not be lopsided. It should be a prosperity that springs from an expanding economy with full shares for all—businessmen, farmers, working people, the young and the elderly. We seek a prosperity for America that insures social justice.

We all want peace; peace is no partisan issue. But the peace we want must be enduring. It must have deep roots.

Peace is not passive; it is active. Nor can peace be won by slogans.

There can be no peace in a world plagued by poverty, hunger, disease, and illiteracy.

There can be no genuine and lasting peace in a world plunged headlong in a reckless and unrestrained arms race.

Aristotle rightly said that poverty is "the parent of revolution and crime." Then why tolerate it—when mankind has at its hand wealth and real power of fantastic dimensions?

In America's so-called surplus food and fiber production, we possess wealth of a uniquely useful character—not a curse, but a blessing.

We can, and we must, use this enormous wealth for the benefit of all men—not only because it is the right and just thing to do, but also because it is fundamentally in our own interest. We can and we must give leadership to a worldwide cooperative attack upon poverty and ignorance—the eternal enemies of peace and freedom.

At the same time, we must explore every opportunity—relentlessly, tenaciously, patiently—to find agreement on a safeguard system of arms control.

The job of the next President of the United States is to take off the wraps—to liberate America's energies and resources—and to tell the American people the plain truth. For the critical dilemma of American leadership will be how to preserve the spirit and the letter of freedom in America, while organizing our society to compete with the monolithic, disciplined, and onrushing Communist system.

There must be democratic planning and purpose. Our national policies cannot be compartmentalized. The great decisions of war and peace are interwoven with a score of other national policy decisions. Agricultural policy and foreign policy cannot be divorced. What we do in this country to enlarge or to abridge the rights of minority groups inevitably has a direct and heavy impact on our position in the world.

No major area of American effort fails to bear directly on our relations with the rest of the world.

But, planning in America cannot be dictated. In a democracy no man can lead by ordering and directing, but only by persuasion. The next President of the United States must be more than an executive. He must in a very real sense be an educator. He will lead successfully only by building a consensus behind a total national effort—embodying the national will and expressing the Nation's priorities.

In his role of educator, he must tell the people that if the age of complacency continues, America will soon become a second-class power.

He must tell them that we have already been surpassed in a number of military and scientific fields, and that a vast effort will be needed to regain the posture of strength necessary to negotiate with the Soviets in any field including disarmament.

He must understand that science has given politics new dimensions in which to work—not just for war, but for peace.

He must tell them that America needs strengthening inside, that she has been starved for the public and social services, the research and discovery, that must undergird a growing nation and an expanding economy.

Yes, he must tell them that these programs will cost money, and will have to be paid for.

I myself am convinced that they can be paid for if we can stimulate our economy to the growth rate America achieved before the 1950's and that it can and must have in the 1960's. They can also be met, in part, by closing tax loopholes.

But if the needs should prove larger, then the American people should be asked to face up to that prospect and pay the bill. They should in any event be disabused of the notion that the Internal Revenue Code of 1954 is as immutable and heaven-sent as the Scriptures.

We can afford to do what needs to be done.

But there are some things America cannot afford, and the next President must make this abundantly clear.

He must tell our people that we cannot afford a second-best defense, or inadequate schools, or underpaid teachers, or second-class citizenship for anyone. We cannot afford cities clogged with traffic, cloaked in smog and riddled with slums. We cannot afford prolonged recessions and unemployment.

Above all, the next President must remind the people of a vital lesson of history: that America can do anything she wills to do.

America did not stop fighting World War II or pull out of Korea just because she couldn't balance the budget.

America has shown that when summoned to the heights, she can rise to the heights.

But she will not be summoned by men who everywhere see obstacles rather than opportunities.

She will not be summoned by men for whom good intentions are a substitute for action.

The world cries out for leaders who seek and enjoy endeavor, who will achievement and point the way to it.

The late Eugene Meyer, one of the most revered men in your profession, once told a Senate committee in a time of crisis:

"All that we value in civilization has come about through the agency of men who refused to allow nature to take its course—men of heroic hope who used the sovereignty of their spirit and the light of their reason to force the proof that the human person can make his own purposes prevail in the face of blind fortune."

Men and nations can forge their own destinies if they but will to exert the "sovereignty of their spirit and the light of their reason." But for men and nations to will this, their leaders must will it for them and with them.

The Senate in Recent Years

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. PROXMIRE. Mr. President, Richard Rovere writes a provocative analysis of what has happened to the Senate in recent years in his Washington letter to the current issue of the New Yorker magazine. I ask unanimous consent that an excerpt from his letter relating to the Senate be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Except for a brief debate among Senate Democrats over the efficacy of LYNDON JOHNSON's leadership, the session thus far has been surpassingly dull, and no relief from the dullness is in sight. No public hearings of much interest are scheduled, and the Senate this year is unlikely to be the scene of any momentous debates. The last Senate session was hardly lively, and it is a puzzling circumstance that the Senate today, though it probably boasts more Members with first-rate intellectual equipment than it has had at any other time in this century, is a far less interesting forum than it was 10 or 15 years ago, when the caliber of its individual Members was pretty low. It is possible that there is some relationship between this and the Senate's recent importance as a breeding ground for presidential candidates. The past few years have seen the Senate pull ahead of the statehouses as a source of presidential timber. This is not because of the superior quality of its men but because national and international issues have become the crucial ones to most voters, and also because the mediums of publicity have taken on an increasingly national character. It is a rare Governor, such as New York's present one, who can make himself heard across the country on matters of interest to the entire Nation, and, as far as that is concerned, it is a rare Governor who has anything to say about them. But almost any Senator is likely to find himself tapped by a national network for an occasional panel or interview show, and sooner or later Time or Life or some other periodical gets around to telling its readers about even the more obscure Members. As Senators have been made to seem less remote, Governors have been made to seem more remote; the increased power of the Federal Government, and the accompanying nationalization of issues have made the statehouses seem more parochial than ever. The Senate, though, appears to be a less stimulating place than it was when it produced fewer national figures and potential candidates, and one reason may be that as its more prominent Members grow in stature as sages and leaders, they diminish in senatorial stature. They function on "Meet the Press" or "Face the Nation" rather than on the Senate floor or in the hearing rooms, and when they become active candidates they are hardly Senators at all. Senator KENNEDY used to make some eloquent and penetrating speeches from the floor, but for the last year or so he has been saving his fire for dentists' conventions, newspaper interviews, and televised lectures. Senator HUMPHREY last year was making some remarkably interesting talks on disarmament and was heading a serious investigation of the subject; now he is a candidate in primaries and is concerned principally with "gut" issues. The number of candidates in the Senate is, of course, small, but the fact that there are practically none anywhere else must make just about every Senator aware of the possibilities of the place, and a bit less content to look upon it as a institution where a man can find complete fulfillment. It was this feeling about the Senate that used to make it so fascinating, and it would be a most melancholy development if this feeling were to die out.

RICHARD H. ROVERE.

Communist Infiltration of Latin America—Article by Constantine Brown

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the well-known columnist, Constantine Brown, which appeared in the Washington Evening Star, Tuesday, January 26, 1960. In his column, Mr. Brown discusses the dangers inherent in a policy of weakness and vacillation, insofar as Communist infiltration of Latin America is concerned. His analysis of the situation warrants careful reading, not only by Members of Congress, but by the American public as well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACTION NEEDED IN HEMISPHERE—HOPE THAT PRESIDENT'S TOUR WILL ALTER PRESENT TREND CALLED WISHFUL THINKING

(By Constantine Brown)

A Soviet embassy has been established in Bolivia's capital of La Paz. An Egyptian diplomatic mission is being established in Panama City. Throughout Latin America delegations and missions of Russia and its satellites, and especially Communist China, are active in a successful anti-United States campaign.

The systematic and well-conceived propaganda is bearing fruit. Hence, the deep concern over the situation among Republican and Democratic Members of both houses of Congress as well as in the Pentagon. The State Department appears to be in a state of confusion since the death of Secretary Dulles and retirement of Undersecretary Robert Murphy. Policymakers wonder what to do over the impossible situation in Cuba. The general trend seems to be, Don't offend Castro.

Prodded by Communists—particularly the advisers sent by Peiping—Dictator Fidel Castro and his henchmen are kicking over the traces and losing no opportunity to slap Uncle Sam.

Castro's activities are not confined to Cuba alone. They extend to Panama—where he attempted a coup d'etat last November—and to a number of other countries in Central America and the Caribbean.

The State Department's diplomatic strategy seems to consist of what the French call cherchez midi a quatorze heures (look for noon at 2 p.m.). That is to say, Do tomorrow what should have been done day before yesterday. But even in this policy which may imply a show of strength, there are a number of advisers who shun taking at least some economic actions which might conceivably bring the Cuban dictator to his senses.

The fact that the Cuban people themselves are beginning to feel and resent strongly the heavy hand of Fulgencio Batista's successor even more than they felt that of the previous regime seems to be ignored by our State Department experts on Latin American affairs. They are advising President Eisenhower and Secretary Herter that any show of strength, even when the

rights of American citizens in Cuba, guaranteed by international law, are ruthlessly ignored, might play into the hands of the Communist propagandists.

Strong actions would be welcomed by our sister Republics which fear Communist intrusions. They feel themselves hopelessly handicapped because the powerful United States has adopted too literally the Christian virtue of turning the other cheek. Thus Castro and his crowd, whom we rushed to recognize despite their known Communist record and who received last year the accolade of the American newspaper editors when the "leader" was their guest of honor and featured speaker at their gathering in Washington, is waging a relentless campaign against us, not only in Cuba but in other Latin American countries.

A policy of wait and see is still being advocated by the State Department where it is felt the pending visit of President Eisenhower to a number of Latin American Republics would result in changing the present trend in our favor.

There seems to be no doubt that there will be no repetitions of the dramatic incidents experienced by Vice President and Mrs. Richard Nixon during their visit to South America. The Communists have reportedly passed the word, as they did when Mr. Eisenhower visited Rome, that there should be no hostile manifestations. But what seems to be overlooked is the fact that the Middle Eastern countries where Mr. Eisenhower was received with thundering ovations are bitterly anti-Communist. India, where the reception was even more spectacular, was feeling for the first time the hot breath of Communist aggression.

The people of Latin America do not have the same awareness as those of the Asian Continent. Hence, whatever enthusiastic reception Mr. Eisenhower man enjoy in Latin America will not necessarily have the same meaning as in the Middle East. Hence, the expectation of some superoptimistic diplomats that the present situation would change after the Chief Executive's visit next summer appears at best wishful thinking. The realists in Congress and Government agencies feel that nothing but determination by the administration could avert a Communist takeover in our hemisphere where the diplomatic experts consider the Monroe Doctrine as obsolete.

Revitalizing American Railroads

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. WILEY. Mr. President, while some of our industries are teeming with growth and progress, others, which have served us well in years past, seem somehow to be in a state of dormancy and uncertainty. With less than one-twelfth of the world's population and little more than one-third of its area, North America has nearly one-half of the world's railway mileage and far more than one-half of the aggregate railway capacity to move passengers and freight. It is the railroads that helped build the economy of this country, and it is the railroads that bridged East and West. Yet now, while the country is steaming ahead, our railroads somehow seem to be left behind.

It is a common notion among many so-called financial experts that no money can be made in railroads, and that railroads, therefore, merit little future attention. Yet it has been demonstrated, both in Europe and in this country, that when progress comes to railroads, profits also come. What is said about railroads has been long said about public and municipal transportation generally—that they are romantic but not practical remnants from an era gone by. But one needs only to look at what happened to the public transportation system in the District of Columbia over the past few years to be reassured that there is money to be made if progress is introduced.

A few months back I called upon the railroads' management and unions to discharge their public responsibility by negotiating a settlement and preventing the danger of a strike. I said at that time:

The blueprints of a strike are now being readied—and this is in face of the continuing Communist threat, the urgent needs of national security, and our steel strike damaged economy. Instead of preparing for a strike, they should be making the blueprints for railroad improvements.

Many of our railroads are now in financial difficulties. They claim that "featherbedding"—which means work paid for but not needed—is costing them nearly one half billion dollars a year. The railway unions contend that "featherbedding" does not exist. Yet, most railroad work rules and management practices were adopted after the First World War—in a day when passenger trains averaged 20 miles an hour and trains moved at about 12½ miles an hour—half of the present day speed.

It would appear that railroad management and unions have a great responsibility and challenge ahead of them. It is imperative that this great arm of American free enterprise not be permitted to remain long moribund. It is imperative that they look at the new facts of American life, that they make use of newer and better equipment, of newer methods of management and development—so that the full faith of the people and business in the American railroads may be fully restored.

I should like to have printed at this point of my remarks a letter from Mr. Joseph C. Wangen, of Superior, Wis., who traces the railroad history over the last 46 years, and concludes:

To quarrel over advancement and not accept the betterment it furnishes as a give-and-take proposition is paradoxical. The increase in intelligence is bound to bring improved achievement. Why argue against the achievements these new inventions bring? Should we go back to the days before the moldboard plow? I think not.

I ask that Mr. Wangen's entire letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RAILROAD MILESTONES

To THE CHRISTIAN SCIENCE MONITOR:

After working for 46 years on a railroad I am naturally interested in the present railway controversy.

If one will but turn back to the turn of the century for a view of railway operations as they then were, we may get an idea of what developments have taken place.

Entering our town from the south, the railroad had a downgrade, which meant a stopping problem for freight trains in particular. We kids would watch these trains come in, for it was quite spectacular. There were no airbrakes then so the brakemen would have to run the full length of the trains on top of the cars, and with their brake clubs they would turn the brake wheel tight on each car to bring the train to a stop at the station.

We looked upon this feat with a sort of hero worship, for it was plain there was great risk involved. With the introduction of the airbrake, the most difficult and hazardous task was removed for the trainmen.

When the steam engine came into being, it was about the most outstanding development in machinery, and anyone who drove one had the high title of locomotive engineer. Academically they are not engineers, but engine drivers. The run in those days was set for 100 miles, for which the engineer, the fireman, and the trainmen received a day's pay. This is still in effect, and the railway men do not want to change it, even though the speed of trains has increased several times.

The fireman really had to work, especially if he were firing a mallet engine, which is two engines in one as they are equipped with a double set of cylinders and driving wheels. To stoke coal in one of their fireboxes was really something, for these fireboxes had almost double ordinary length. Yes, those engines could really eat up the coal, especially on a mountain run.

Later handfiring was changed by introducing the stoker, which delivered the coal into the firebox by a mere pull of a lever, for the power of the engine turned the screw conveyor. The writer recalls too well when these stokers came into use for he made up the initial order for parts to be installed. This took place in the year 1914.

The next step of improvement for steam locomotives was the conversion into oil burners. This also made the task easier for the fireman. The final change came with the diesel locomotive. These latter changes made the job of a fireman a position.

To quarrel over advancement and not accept the betterment it furnishes as a give-and-take proposition is paradoxical. The increase in intelligence is bound to bring improved achievement. Why argue against the achievements these new inventions bring? Should we go back to the days before the moldboard plow? I think not.

JOSEPH C. WANGEN.

SUPERIOR, WIS.

Necessity or Expansion and Improvement of Educational Programs in the United States

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. YARBOROUGH. Mr. President, almost daily we are hearing more and more debate over the question of Federal assistance to public schools. As we review the great need to expand and improve our national educational program, it seems to me that the question is not

whether such assistance is needed, but rather how much is needed and what form it will take, whether of construction, or teacher pay, or other forms.

The principal concern in the minds of most Americans, it seems to me, is that we provide a program which will meet the needs of our schools for growth and improvement and at the same time assiduously retain local and State control of schools in every sense of the word.

Mr. President, recently one of the outstanding daily newspapers in my State published an excellent editorial on this subject, one which I believe reflects the thinking of many Texans on this matter. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Aid to Education" from the January 24, 1960, edition of the Corpus Christi Caller-Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AID TO EDUCATION

Election-year pressures are powerful for passage of a Federal aid to education bill this session, but election-year political maneuvering could stall that needed action.

The urgency is evident. State-local effort has built around 70,000 classrooms over the past 3 years, but has reduced the estimated national classroom shortage by only 17,000 to 132,400. Enrollment continues to soar. About one-fourth of the Nation's school districts have reached their legal debt limits for construction bonds. And most States are scraping the bottoms of their tax barrels for more aid.

Both major political parties, a majority of Congress, and the administration appear agreed that more Federal aid is needed. But a battle royal is building up over what kind, for how long, and how much.

Reversing his stand of a year ago, President Eisenhower threatens to veto outright grant aid and insists on credit construction with the Federal Government paying half the debt service. The National Education Association demands no-strings Federal grants for both construction and teacher pay, and threatens to fight anything else.

In between is an array of pending bills favored by various congressional factions. They differ mainly as to total amount of aid, the combinations of grant and credit, whether aid will be limited to construction, and various needs formulas for allocating the aid.

Lurking in the background is the chronic opposition involving the integration and church-state issues, fear of Federal school control, and concern over Government spending generally. With majority favor so badly split, that minority opposition could easily prevail.

The administration and Congress should seek a sensible compromise, somewhere between the Eisenhower and NEA extremes, at least a substantial beginning on construction aid. This Nation needs school classrooms far more than it needs an additional political issue for the election campaigns.

WBTV's War Upon Illiteracy

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. ERVIN. Mr. President, the television station WBTV of Charlotte, N.C., which serves a major portion of the South Atlantic States, merits the thanks of the Nation for the war which it has been conducting against illiteracy. The census of 1950 disclosed that there were 155,000 persons of the age 15 and upward in North Carolina who were unable to read or write. This figure has been substantially reduced since that time. Any illiteracy, however, is a blot on our civilization, and those who seek to eliminate it merit the thanks of the Nation, as well as the gratitude of those whose intellectual horizons are expanded by the ability to read and write.

Harry Golden, editor and publisher of the Carolina Israelite and author of the two best sellers, "Only in America" and "For 2 Cents Plain," wrote an article in the TV Guide for December 26, 1959–January 1, 1960, in which he described in graphic fashion television station WBTV's war upon illiteracy in North Carolina and neighboring States.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONLY IN AMERICA—TELEVISION REACHES OUT TO 1 MILLION SOUTHERNERS WHO CAN'T READ OR WRITE

When I was graduated from the New York East Side Evening High School 42 years ago, the valedictorian was a bearded peddler, 50 years old. He was not unusual. The night schools were filled with elderly students who spent their days in squat-legged tailoring, or door-to-door peddling, or collecting junk. Even rabbis were in these classes. The immigrants who made their home on the lower East Side wanted to read and write the language of their new country. Perhaps the fact that most of these immigrants were Jews explains this, for study of the written word is an important part of the Jewish religion. That they were immigrants is also an explanation. Like all immigrants, they were possessed with that driving urge to succeed even to out-American the Americans, if possible. But the real reason why they wanted to read and write English is that the community would not tolerate illiteracy. Not to be able to read and write was too shameful an admission for a household on the lower East Side to make. The family made every sacrifice possible to educate itself and its children. And then these immigrants had the great gift of the public institutions of New York City. The city furnished us not only the schoolrooms and electricity, and maintenance, and free books, but provided us with wonderful teachers. (These teachers were our first contact with the gentile world of America and it was they who helped ease our way into the open society.)

There was total literacy on the lower East Side 40 or 50 years ago.

But in the South of 1959 illiterancy has not yet been conquered.

Thousands of adults in the Carolinas, Alabama, and eastern Tennessee are illiterate. Census figures for 1950 reveal that there are 155,000 illiterates of the age of 15 and upward in North Carolina. While this is not as serious a problem as it is in at least five other Southern States, there are thousands of other functional illiterates—people who have been taught to read and write but who have never done so.

But there is a groundswell, rapidly gaining momentum, to recapture these wasted human resources. A community endeavor is underway which may wipe out illiteracy in this generation. It is called the Literacy Movement in the Southeast by Television. A successful pilot program was launched in January 1959, over station WBTV, Charlotte. WBTV has fully exploited the vast potential of television, which transforms the living room of any Piedmont farmhouse into a classroom any and tar-paper shack into a school.

In the conquest of illiteracy, television is a tool; an animate tool, of course, but still a tool. To conquer illiteracy you need the subject matter proper, and an energetic community and an agency to coordinate the community.

The subject matter for this movement was provided by Dr. Frank Laubach, a former missionary who worked for 23 years in more than 90 countries, helping adults learn to read and write. Dr. Laubach's system uses picture-word-letter symbols and is designed specifically for adults. A cup hanking on a hook becomes in a series of pictures the letter "C" and then the word "cup"; a boy with upraised arms becomes the letter "U" and then the word "up." Dr. Laubach's illustrated system teaches by association.

The entire effort—arranging subject matter, television time, enrollment—was coordinated by the John C. Campbell Folk School in western North Carolina, under the direction of Mayes Behrman, head of the school's literacy division.

Behrman enlisted the aid of WBTV in Charlotte, which volunteered its channel for four 30-minute lectures each week, televised from 6:30 to 7 a.m. on Mondays, Tuesdays, Thursdays and Fridays—98 lessons in all, extending over a 6-month period. Lacy Sellars, program manager of WBTV and a native North Carolinian, estimates that the cost of the program, had it been sponsored by commercial advertisers, would have been about $20,000 in time alone. Add to this the cost of hundreds of innumerable "spot" announcements which advertised the program. As it was, no time was purchased and WBTV underwrote all the travel, telephone, and printing expenses (the experiment was also helped by a grant from I. D. Blumenthal, a Charlotte industrialist).

The Charlotte Observer, a large and influential newspaper, deeply committed itself to the project. L. M. Wright, one of the paper's staff writers, devoted a comprehensive series to the aims of the project, and the Observer commended editorially time and time again on the value of the experiment. The Observer was also instrumental in interesting every paper in the area to lend its editorial support to the literacy movement.

Television dealers in Charlottee lent the necessary number of sets. The Elks, the American Legion, the ministerial brotherhoods, the church auxiliaries, women's clubs and the fraternal organizations recruited from their membership the number of volunteer "assistant teachers" needed. These assistant teachers were professional men, teachers, nurses, salesmen, all of them high school graduates, who took a brief instructing course so that they could help students each morning. These community organizations also enrolled the 1,000 adult illiterates in scores of small classes, each class supervised by an assistant teacher.

The only expense incurred by the pupil was in his book—duplicating the pictures he saw on television—sold to him at below cost for $4 and which he could keep.

The first program was beamed last January.

For these morning programs WBTV used a kinescope made from a live show on WKNO–TV in Memphis, an educational television station.

Was it a success?

It was. In this 6-month period, 1,000 adults learned how to read and write.

So successful was the program that beginning in January, eight commercial stations will offer this course in the Carolinas and Tennessee. In addition, two South Carolina stations, WCSC–TV in Charleston and WIS–TV in Columbia, will begin the series

next May. The January starters are: In North Carolina, WECT in Wilmington, WNCT in Greenville, WTVD in Durham, WFMY–TV in Greensboro and WBTV in Charlotte; in South Carolina, WBTW in Florence; in Tennessee, WRGP–TV in Chattanooga (which will offer the lessons for eastern Tennessee and extreme western counties in North Carolina), and WBIR–TV in Knoxville. Alabama's literacy movement will be carried by the State educational television network.

One cannot underestimate the tremendous role played by the John C. Campbell Folk School in initiating this program, nor of the Laubach method in effecting communication, nor the generosity of WBTV, nor the prestige lent the experiment by the Charlotte Observer. But the Literacy Movement of the Southeast by Television will succeed because the entire community works in its behalf—actively, responsibly, and personally. Illiteracy cannot fight against genuine community concern. As this movement gains impetus throughout the South, illiteracy will become obsolete. Perhaps, in fact, the Literacy Movement in the Southeast will rival the great public-school effort of the eastern cities which turned the immigrant children of Russia, Rumania, Hungary, and Italy into citizens within a generation. Soon thousands of southerners will know the joy of reading about their ancestors who helped create this Nation at Kings Mountain, Guilford Courthouse, and Yorktown.

The Forgotten Man: The American Farmer

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. HUMPHREY. Mr. President, it was my privilege on the date of December 4 to address the Texas Farmers Union at Fort Worth, Tex. The Farmers Union in Texas has been growing steadily, solidly, and is gaining ever wider and stronger support. This is a splendid organization of dedicated and patriotic Americans who are justly proud of their activity. It was a real privilege to address this splendid gathering.

The distinguished junior Senator from Texas, RALPH YARBOROUGH, introduced me to his fellow Texans. He was received with great enthusiasm and is justly known as the champion of the farmers of Texas.

I ask unanimous consent that my address before the Texas Farmers Union convention be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY U.S. SENATOR HUBERT H. HUMPHREY, DEMOCRAT, OF MINNESOTA, BEFORE TEXAS FARMERS UNION BANQUET, FORT WORTH, TEX., DECEMBER 4, 1959

Some years ago, Franklin D. Roosevelt made famous the phrase, "the forgotten man."

Today, there is definitely a forgotten man in the eyes of the present administration—the American farmer.

I don't need to remind any of you that the American economy has had its ups and downs since this administration took office. But it has always worked out so that the farmer shared in all the downs but was left out in the cold during the ups.

Let me give you some examples of how the farmer has been left out in the cold—down and out.

SLIDING DOWN THE SLIDING SCALE

During the first 5 years of this administration, net farm income declined by about 2 percent a year—while nonfarm net income rose by 2 percent a year.

And in 1958, the income per person on the farm was just about half the income per person off the farm. And I'm not just talking about cash income—I'm talking about total income.

This year, according to the Republican hucksters, we're supposed to be in a boom. If you don't believe me, why just ask the Republican National Committee. They'll tell you how rosy everything is supposed to be.

Well, before these Republican propagandists write up their press releases, they must throw away all the figures they get about the American farmer. Because during this so-called Republican boom things certainly aren't rosy down on the farm.

Sure, during the first 9 months of this year, the income of the American people as a whole went up $9 billion.

But what happened to farm income?

You know—it went down by more than $2 billion.

Net farm income during this so-called boom year has gone down nearly 24 percent.

In terms of dollars with the same buying power, the net income of agriculture this year is the lowest in 19 years.

The parity ratio is lower today than at any time since 1940.

Is it any wonder I say that the American farmer is today's forgotten man?

Now, of course, the Republicans would like to have you forget that you're the forgotten man. And they've adopted a new technique for doing that. They've appointed a special committee of experts to tell you how great things are going to be for you 17 years from now—in 1976.

You know, it's an amazing thing. The Republican Party has been in business for over 100 years now—and it has to organize a committee to tell it what it stands for.

Well, this committee had a lot of high-sounding phrases to solve the farm problem. But when you cut through them and boil them down to simple English, they say simply, "We Republicans like Ezra."

So if you want to know where you'll be in 1976 under the Republicans' long-range program, just try to imagine going through 17 more years just like the past 6—of falling prices, falling parity, falling income—and failing farms.

I know you can't afford many more years like the past six—and I don't think America can either.

THE WRONG ANSWERS TO THE WRONG QUESTION

I've been doing a lot of thinking about the current plight of the American farmer, and also about the great depression of 1929—at the end of another Republican administration. And I've come to the conclusion that there's a frightening similarity between the two.

Thirty years ago, as the businessmen of that other Republican administration surveyed the phony boom of the late 1920's, they concluded that the country was suffering from one thing: overproduction.

Well, the Republican farm program of the 1950's starts from the same basic premise: that the basic farm problem is overproduction.

And having drawn that conclusion, they pick the most inhuman solution to it: lower prices and break the farmer's back—then, according to Republican doctrine there won't be so many farmers—and maybe they won't produce so much.

This is the most inhuman solution, and it is also the most ineffective. We've all learned that over the past 6 years. Any solution to the farm program that flies in the face of human nature—and of humaneness—is bound to fail.

What has been the result of this deliberate Republican policy of farm deflation? Who has benefitted?

Not the consumer—for while the prices received by farmers have dropped severely since 1952, the price of food to the consumer has gone up sharply.

Not the worker—for the worker is basically a consumer.

Not the businessman—for if farm income hadn't dropped off by billions and billions of dollars, farmers would have much more money to buy the products of business.

Nor have the surpluses been reduced. Quite the contrary—today, they are several times what they were when this deliberate farm deflation policy was started.

And if the Republicans in Washington knew anything about human nature, they would have known from the beginning that increased production—yes surpluses—would result from deliberately depressing farm prices. As long as the American farmer is a free and independent man, he will try to make up for lower prices by planting more. It's just plain commonsense and economic necessity.

THE TRUE SURPLUS—HUNGER

The result of the current farm policy has been a great deal of suffering. The farmers have suffered, the consumers have suffered, business has suffered—but there's another group of people who have suffered, too.

I'm talking about the millions of people who go to bed hungry every night, simply because they can't get the food to feed themselves or their families.

Many of those people are right here in the United States.

Millions more are abroad.

How shameful that America's granaries should be bulging at their seams while there remains a mouth unfed.

How shameful that the American taxpayer should be paying a million dollars a day to store our mounting surpluses—instead of devoting that money to help feed the hungry and clothe the needy.

I am not talking about dumping our products abroad and destroying world markets.

I am talking about reaching out with a humane, helping hand to nations who cannot buy foodstuffs in the world market, but who need our help desperately.

Why don't the Republicans give their enthusiastic support to a Food for Peace plan such as I have proposed?

I'll tell you why: because the Republican spokesmen are afraid it will cost too much money. But they ignore the cost of doing nothing—or too little.

Let me tell you something about the image of America abroad. I have had the good fortune to travel quite a bit in recent years, and I have seen what the world thinks of America.

Do you remember that Franklin Roosevelt used to talk about the good neighbor policy? Well, everyone in the world believed he meant just that, because Franklin Roosevelt was a good neighbor right in his own country. Everybody knew that Franklin Roosevelt loved people and believed in "Love Thy Neighbor."

And when President Truman inaugurated the point 4 program to help the down-

trodden countries of the world, that rang true, too, because the world knew that Harry Truman was the friend of the downtrodden here at home.

But America doesn't enjoy that same image today. And do you know why? Because when the world looks at Uncle GOP today, it sees dollar signs in his eyes. They are the eyes of a moneylender or a rich relative, not the eyes of a humanitarian who believes in people and in sharing good fortune to relieve misfortune.

Besides using food for peace, there are other great things that this country could do. We could put our young men to work in his forests and parks, conserving and building our great national wealth. I have proposed such a program—a Youth Conservation Corps—but Uncle GOP say "No."

We could have a food stamp plan in order to supplement the diets of our needy—but Uncle GOP says "No."

And if Uncle GOP were truly thrifty—and smart—we could have a farm policy that would strengthen the farm economy, the national economy, and the economy of the free world—and it would cost a lot less tax money than the present Republican mess.

A POLICY OF DESPAIR

The Republicans have not offered us a farm program—not last week, nor last year, nor any of the 7 years they have been in power. The farm policies they have followed have weakened the ability of the Government to aid farmers, have driven the young people from the land, have stifled the rural business communities.

And the Republican policies have not resulted in benefit to the cities either. When the young men and women turn from the land, go to the cities to seek their fortunes and new ways of life, they find no opportunities awaiting them. There has been no program to prepare the cities for the people, or the people for the cities. The Republican farm policies are matched by their bankrupt policies in regard to labor, education, health, and urban development.

Present farm policies have brought us to the place where farmers and their children feel there is no hope in the land, they are met with discouragement on every side.

Present farm policies have paved the way for the seizure of America's vast acres of agricultural land by corporate interests, by corporate powers. The people in the cities are being softened up for this seizure by the Madison Avenue boys who control the channels of communication. That is why every other slick magazine you pick up has another article that makes the farmer the whipping boy for the extravagant, wasteful, eroding farm policies. Divide and conquer in the name of the corporate interests.

You know and I know that unrestricted corporate economic power over our land and our people spells exploitation—heartless use of human resources and soil resources and water resources—that does not take into account the present and future needs of the people in our own country or of the people of the world.

A CHARTER OF HOPE FOR FARMERS

What do I think we should do about a farm policy?

I believe that Congress should set forth goals for American agriculture, and then give the President and the Secretary of Agriculture a wide variety of tools for the attainment of those goals, and broad discretion in the choice of those tools. And I believe farmers themselves should have a voice in this matter that concerns them so vitally.

I spelled out these ideas in the Humphrey Family Farm Program Development Act which I introduced last August. This is a charter of hope.

What are the goals?

The first is a determination of a fair price for farm commodities and a fair income standard for farmers. Income per farm person is only about half the income per nonfarm person. This lop-sided situation can't be changed overnight, but it can be gradually changed if pricing policies are geared to the attainment of a fair income for farmers—and this can be accomplished in a way that lessens the tax burden, instead of piling it higher and higher.

The second objective is a production goal. This goal should be determined by what is needed to satisfy the true needs of the American people, the commercial export market, necessary reserves, and foreign policy purposes.

And this goal should not be met by a deliberate policy of farm deflation, of breaking the farmer's back to reduce production. There are more humane and more effective ways of achieving production goals in agriculture, and they should be used.

Third, we need an agricultural resources conservation program. This is an integral part of any comprehensive farm program. Any land adjustment program must take into account our present needs—needs of farmers, needs of consumers, needs of rural communities, and needs of generations to come. Every American has a stake in the present and future productivity of our land. Our growing population makes this so.

The time when a frontier farmer could "mine" his land and move on to another farm—leaving behind him starved, treeless, eroded land—is far in our past. Soil and water resources are vital to national well-being—and to international well-being.

Therefore, a comprehensive land use program must be based on the facts of both present and potential consumption needs. It must safeguard the well-being of the family farmer. An agricultural resources conservation program is the heart of a sound, forward-looking farm program.

Fourth, we should have employment goals for American agriculture. These goals should envisage a farm population, and especially farm families, which have adequate opportunity to be fully and usefully employed on our farms. They should include proper credit facilities to strengthen the operation of the family type farm. They should also include employment opportunities for those within the farm population who may wish to transfer to other occupations.

Undoubtedly, there would be some mistakes and some difficulties, even under this kind of program. But such a program, being based upon sound and worthy objectives, would be self-repairing instead of self-defeating.

It would bring bring supply and demand into balance at the highest possible levels, instead of trying to bring them into balance at depressed levels.

It would use income progress, rather than income deflation, as a tool for farm production adjustment.

It would, in the long run, reduce public costs by substituting sanity for confusion.

It would unite instead of dividing the worker and the farmer, the producer and the consumer, by using a full prosperity program for agriculture as a reinforcement to a full prosperity program for all, and by promoting the full prosperity of others as a reinforcement to the full prosperity of farmers.

It would help us to advance the American economy as a whole by seeing it as a whole, instead of mistreating the economy by breaking it down into arbitrary bits and pieces.

It would bring our agricultural efforts into the further service of free world humanity and world peace. It would make us look at our so-called wheat surplus in terms of national and worldwide needs. When you do that it becomes a strategic and vital reserve that lends strength and security to the free world. Instead of considering our store of wheat as only a burdensome problem, a weight upon the farmer and a drag on the economy, it should be treated as the source of moral, political, and economic strength.

We should look at the quantities of food held in reserve, and the productive capacity of our land just as we look at money in the bank—this is our capital goods, our capital treasure. Money is worthless piled up in a bank. Only when it is put to use does it have true worth, true value, true meaning to people.

From Biblical times, down through the centuries, wheat has been a symbol of life and hope to all mankind. A kernel of wheat is indeed a spark of life. All over the world people pray: "Give us this day our daily bread."

A CHARTER OF HOPE FOR ALL

I have spoken of the kind of goals which should be part of our farm policy—goals I have incorporated in the Humphrey Family Farm Program Development Act. I see an America in which we can and should attain such goals, not only for agriculture, but also for the Nation at large. We need to set goals for social security expansion, for wage expansion, for business expansion, for education and health improvement—all reinforcing one another, all consistent strains in the symphony of American effort, and all responsive to the new pace of our technology and science and invention.

Then, and then only, will we be able to lead the world to rising standards of living and to peace.

Hypocrisy of Northern Charges Against Southern Justice

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. THURMOND. Mr. President, the January 28, 1960, issue of the Williston Way, of Williston, S.C., contains a very timely and appropriate editorial which points up the hypocrisy of northern charges against southern justice. The editorial is entitled "Rape Isn't Rape Up North."

I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAPE ISN'T RAPE UP NORTH

Last year, when four young white men were charged with the criminal assault of a young Negress in Tallahassee, Fla., there was much hue and cry by the liberal northern press and agitators and the NAACP that the death penalty be given the group. Millions of words of copy were written before, during, and after the trial by special writers sent to Florida to cover the trial and when the quartet received only a life imprisonment sentence there were threats of carrying it to other courts in an effort to get the death sentence.

Along about the time that the trial was in the news four teenage Negro boys in New

York raped a young white girl. This did not bring near the lineage in the news that the Florida affair had and a NAACP official tried to get a court order barring newspapermen from even covering the hearing. None of the hue and cry for the death penalty was raised in any quarter.

Then, in November, the group was allowed to plead guilty to a charge of felonious assault with intent to commit rape (the fact that rape had been committed was overlooked), thus assuring themselves of a sentence no longer than 5 years.

In recommending that this plea be accepted, the assistant district attorney in charge of the case said: "This was not a typical vicious attack. The victim was on a social basis with the defendant before the attack."

If the fact that social integration of the races makes rape a less heinous crime, then that is just another reason why we prefer the maintenance of segregation of the races. Or is it that rape just isn't rape up north?

The Quiet Russians

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. HUMPHREY. Mr. President, I recently read a most interesting and thoughtful article by Mr. Harry Pollak, of the AFL–CIO, on his visit to India during the course of the U.S. Small-Scale Industries Exhibition held there by the United States. The article, "The Quiet Russians," appears in the January issue of the AFL–CIO American Federationist. It discusses the Russian-sponsored project of setting up the great new Indian steel mill at Bhilai, and the impact of the friendly, competent Russian technicians who are supervising the construction of the mill and training the Indian workers who will take over.

The contrast to the Indians of Russian and American aid is forcefully brought out in the article. I should like to underline Mr. Pollak's conclusion:

We came away from Bhilai with a strong feeling that our country needs not only to reevaluate some of its aid projects abroad, but that it must pay extremely close attention to the nature of its personnel and their relationships with the peoples of other societies.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE QUIET RUSSIANS—A NEW BREED—INDIAN STYLE

(By Harry H. Pollak)

(Bhilai engineers' pledge, Raipur, January 10—Over 1,300 engineers and all the officials working on the Bhilai steel project have decided not to take any leave until the first blast furnace goes into operation. They include 626 Russian engineers who are helping in the construction of the project.—Excerpt from the Sunday Standard of India, issue of January 11, 1959.)

For years now, Americans have been assailed by the bombast and strident diplomacy of Soviet officials from Stalin to Khrushchev—and on down.

Some of us, meeting during the annual conferences of the International Labor Organization, have been faced with stiff-necked, unrepentant, confident Soviet crusaders who would brook no differences of opinion and were always, always right.

It therefore came as a surprise to see another kind of Soviet representative—the men the Kremlin is sending to the underdeveloped areas of Asia and Africa. In India we saw nearly a thousand Russian technicians helping the Indian Government erect a gigantic steel mill as Bhilai in the District of Durg in Madhya Pradesh.

Where once there was only hot, red wasteland, there is now springing up a new "Pittsburgh," and, manifestly, the Russians who financed the construction of the project with a credit of nearly $133 million, at about a 2½ percent interest rate, are making diplomatic "hay." This is true despite the far greater United States contributions to all forms of technical assistance in India, and despite the fact that the U.S.S.R. was not involved in any significant aid until after the highly touted Khrushchev-Bulganin triumphal tour of India in 1955.

First of all, to the Indian people a steel mill is the archsymbol of their efforts to lift themselves up into the major industrial nation category. In the key race that India is running—obviously against Communist China—steel is a vital index to development. The Chinese Communist slogan of "a blast furnace in every backyard" is a measure of that country's interest. Many an Indian may owe his life to the grain and milk that came from America, but the concrete visualization of the future—even when dimly seen by the lowliest peasant—may be in the hot glare of coke ovens and the flow of molten steel.

But, one may answer, there are other gigantic steel mills springing up. At Durgapur there is an excellent British mill. At Rourkela there is a German plant under construction. At Jamshedpur, which the writer also visited, there is the pioneer Tata plant that is being expanded with American technical assistance from Kaiser. But each of these operations suffers from a special defect in the view of at least some key Indians.

At the British project the complaint runs that the British are aloof and that they treat their Indian counterparts with cool reserve. At the German plant relations between local people and some of the resident German engineers have been poor. At the Tata plant the operation is in the private sector, and as one Bhilai official explained, Russia has extended hands of friendship to the public sector.

Many of these charges are exaggerated, but for this writer, who visited India twice during the last year, a tour of Bhilai in late September brought out something new about the nature of Russian technical assistance which bears even closer examination.

L. N. Misra, superintendent of mechanical maintenance, personally escorted us around the giant works. There was a blaze of activity everywhere. Bulldozers were clearing ground and cutting through roads. New homes and schools were going up all round us. The atmosphere was a combination of Eastern boomtown and the pioneering of the old West. The giant earthmovers contrasted sharply with the half-naked male and female laborers working on construction.

Misra, we learned, was a former Tata chief engineer who, like several others now in key positions at Bhilai, had been persuaded to come into the new program. He struck us as being an eager, dynamic and straightforward individual. As he showed us the coke oven, battery No. 1, in operation, and white hot pig iron flowing out of the blast furnace, he explained that Bhilai in its first stage expected to produce 1 million tons of steel when it reached capacity. (First steel flowed in October.) When the first stage of Bhilai is completed, 4½ million tons will be available in India from all the mills in the country.

As we moved on to the electrical motor shop and construction area for the open hearth furnace, Misra tendered an invitation to a special ceremony that evening when the first "loco" was to go into the open hearth. Ceremony and ritual, we were to learn later, played an important part in the morale-building activities at Bhilai.

We were anxious to know how Misra felt about the differences in the Soviet and American approaches, since he had been at Tata's. He thought for a while and then said:

"In the U.S.A. everyone is allowed to think, while in the U.S.S.R. there is one man who thinks or oders and others execute. One orders; others carry through blindly. While in practice confusion was sometimes created, most of the time it works all right."

As he took us through the operation, he indicated where Russians had been able to solve simple but vital problems—in comparison to what he considered the American approach at his former alma mater—such as self-sustaining repair shops where repairs were made right in the area of breakdown.

The Russians, Misra said, had produced better screening for the coke ovens. There was better access at the many points of the coal chutes. They used bigger brakes. Being a genial and basically friendly man, he added, somewhat as a consolation:

"Outside of Russia, nobody can beat America in steel."

There seems a will to believe in Russian technical superiority that is alarming and annoying to the casual American visitor. There is a tendency to ignore the fact that the Russians have had their share of difficulties and that, in fact, the Bhilai plant is behind schedule.

We returned to our apartment nearby and met a representative of the Bhilai public relations staff—a man with a soft sell and very unlike our Madison Avenue types. He told us that when construction was completed it would take 7,000 to 8,000 employees to operate Bhilai. At present there were 54,000 employees, but 32,000 of them were on construction. A total of 950 Russians were at Bhilai and were steadily being replaced.

(We later learned that there are plans to double the capacity of the mill, which would mean that the Russian technical advisers would probably remain for some time.)

What about the Russians? The public relations man responded:

"They are not dictators here. * * * They advise and guide."

The technique, he added, was equal Russian and Indian responsibility.

The writer noted that the Russian senior officials were housed in apartments similar to ours, in extremely comfortable modern buildings, with a large dining room, living room, large bedrooms, and well-tended gardens outside. Moreover, all contained air conditioning, refrigeration, carpeted floors. An excellent restaurant, catered by one of India's leading restaurateurs, Gaylord's, provided fine food. Most of the Russians had less sumptuous but very adequate quarters and their own cafeterias with their own cooks where they could obtain borscht and other familiar staples.

What about the language barrier? While the Russians have many interpreters, the public relations man said they were teaching Russian to a thousand Indians at the project.

That evening we went to the area where the locomotive was to make its initial run into the plant and saw that there was a considerable air of hustle and bustle. Even though it was long after sundown, a great number of construction workers were on the job outside. Inside, there were a number of Russian officials with their wives greeting workers, together with the Indian dignitaries and their families.

Suddenly a cry went up and the whistle blew as locomotive T3B13 slowly rolled into the mill. It was gaily decorated, and a number of workers were on the top and hanging over the sides. There was an air of genuine excitement, and we saw broad grins on the faces of the Russian and Indian officials. Here we met the Russian chief engineer, N. K. Goldin, and other Soviet representatives who were beaming broadly. We also met one of the chief Indian technicians, Suku Sen, who honored the occasion with a big red flower in his buttonhole.

"We will have ingot steel in 8 to 10 days," he told us. He said that the ceremony sparked the workers with inspiration. We asked him how he got on with the Russians, and he responded: "Excellent. They are not our bosses. They work side by side with us in a partnership arrangement, and when an Indian learns the job we tell the Russians to get out."

The next day we had a long discussion with another leading official who compared his experiences with American technicians in India and with the Russians. One of the great problems, he said, was that Americans, with a much higher standard of living, tend to raise prices in the marketplace. The Russians, whose standards are closer to the Indian, tend to "blend" into the local economy.

"Socially and culturally, we are closer to the Americans," the official said. "There is little contact with the Russians on a social basis. They stay to themselves, and on rare occasions when Indians come to their homes, conversations are limited. Their behavior is impeccable, correct. They do not get into trouble, as nationals from other countries have on occasion."

From several sources we learned that the Russians tend to refrain from open political discussions. They play their roles as technicians to the hilt. There appear to be no serious efforts to involve themselves with local Communist Party activities. And as long as the foreign technicians are at Bhilai and it is considered a "Russian" steel mill, there is little likelihood that there will be any serious Communist efforts to organize the workers.

In the pioneering haze which envelops Bhilai—by comparison with the long-established Tata Iron & Steel Co. works at Jamshedpur—there is a dark side. Beneath the level of top and secondary management and selected "permanent" personnel is a vast mass of temporary workers—primarily construction workers—who live under primitive conditions, who have no strong union to protect them and who have hazardous working conditions. A doctor at a Bhilai field dispensary told us there are so many sick and injured workers that the health facilities are overburdened and many have to be turned away without care.

Conversely, at Jamshedpur, we were impressed with housing, health and safety emphasis, and many other advantages, including what appeared to be a higher wage pattern.

Ironically, the Communists at the Tata works not long ago engaged in a violent and bloody strike, whose consequences are still being felt.

From all of our conversations with Indians and from our observations at the plant level, we got the impression that this new kind of Russian "Point Four" is making an enormous impact. The tensions with Communist China over the border incursions do not seem to affect the attitude of the Indians toward Russia. They look at the U.S.S.R. with rose-colored glasses.

Soviet communism's "top-down" discipline and inculcation of total obedience to the leader principle make it easier, paradoxically, to send such silent missionaries to underdeveloped countries to work on heavy industrial programs. Democracy's representatives by their very nature, on the other hand, are individuals who do not conform to any rigid pattern or ironclad rules of behavior set up by a foreign office.

The brilliant editor of "Thought," Ram Singh, whom we saw again in New Delhi in September, has described the very special advantages which Russia has in such "peaceful competition."

"Russia," Ram Singh writes, "has the singular advantage of its permanent public relations office in the agency of the Communist Party of India. Do what America will, there will always be some people in this country, or in any democratic country for that matter, who would make it their business to decry America and lionize Russia."

His suggestion to the democratic friends of India is simple:

"Let the words be few but action abundant to demonstrate the undoubted excellence of their technique and humanity."

We came away from Bhilai and its sprawling township, Bhilainagar, with a strong feeling that our country needs not only to reevaluate some of its aid projects abroad, but that it must pay extremely close attention to the nature of its personnel and their relationships with the peoples of other societies.

As my friend Ram Singh said:

"More than a change in the pattern of aid, what is indicated is a change in outlook, approach, and perspective."

Cuba and Extension of the Sugar Act

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, February 2, 1960

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a significant talk dealing with the Sugar Act extension, soon to come before this Congress.

I have introduced an amendment which would make a permanent transfer of a portion of the Cuban sugar quota to domestic producers. This amendment I believe is long overdue.

The article to which I refer expresses the views of Robert H. Shields, president and general counsel of the United States Beet Sugar Association, an organization of American beet growers and processors. I believe Mr. Shields maintains a temperate view and an overall objectivity in viewing the economic and social effects of an amendment to the Sugar Act. I would recommend that my colleagues read carefully the outline of our current sugar situation contained in this speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CUBA AND EXTENSION OF THE SUGAR ACT

(Remarks of Robert H. Shields, president and general counsel, United States Beet Sugar Association, Washington, D.C., at Michigan State University, East Lansing, Mich., on Sugar Beet Day Program, February 2, 1960)

Mr. Chairman, distinguished guests, and friends, I am very glad to have this opportunity to be here again on Sugar Beet Day of your Farmer's Week. I am pleased especially because this enables me to renew my acquaintance with the sugar beet growers and processors, and other agricultural leaders, here in your great State of Michigan.

An occasion like this demonstrates eloquently the intelligent and cooperative relationship which obtains between the sugar beet industry and the agricultural universities and colleges of our Nation in the 22 States in which sugar beets are grown.

Cooperation between growers and processors in the beet sugar industry, and between those groups and the State agricultural colleges and the Federal Department of Agriculture, has been responsible for much of the progress this industry has made. In the talks this morning by Grant Nichol, Maury Frakes and Mr. Davis, you heard reports of progress being made in mechanization, in planting of that truly remarkable monogerm seed, in general improvement of farm practices.

Mr. Coryell—C. A.—has reminded me that that the 1959 sugar beet crop in Michigan was, in terms of sugar beet tonnage, the highest ever achieved in the long and distinguished record of the Michigan industry. Hugh Eldred told me that the yield per acre also set a new record. I understand the sugar content of your beets left something to be desired. But don't let that discourage you. Other areas, too, have occasionally had a year of low sugar content—and then have bounced back to new highs.

You had company in your record tonnages. Sugar beet growers for the Nation as a whole in 1959 established new high figures both for total production and yields per acre. We recognize that the benevolence of good weather had something to do with this bounty, but far from everything. For even with the best growing conditions in the world, the crop would not have been so large without the good cultural practices, without the higher-yielding seed, without the cooperation among the various segments of the industry.

In your Farmers & Manufacturers Beet Sugar Association, you have demonstrated the effectiveness of cooperation in sugar beet production technology. I understand that in this audience are farmers who grow beets for all or most of the companies who have joined with you in this endeavor—Michigan Sugar, Monitor, Buckeye, Northern Ohio, Canada-Dominion, and Menominee—and I see representatives of most of the companies as well. I should like to pay tribute to your officers and staff who add their labors to your zeal in order to make this project work: your president, C. A. Coryell, who helped found the organization; Elmer Haines, who as vice president represents growers in policy decisions; Perc Reeve, your executive secretary; Loren Armbruster, your growers field secretary; Mark Berrett, your director of research; Jack Brock, your treasurer; and Art Schupp, now in semiretirement after so many years as your executive secretary.

I refer to the value of united effort in the permissible fields of endeavor in which the Farmers & Manufacturers Beet Sugar Association is engaged because there is a parallel in the field of sugar legislation, which I have been asked to discuss. Sugar laws are, in the final analysis, formulated by the Congress, and are of course primarily the responsibility of the Congress. However, congressional leaders have on many oc-

casions told us that it is extremely helpful to them and also contributes to sound and effective legislation for all the various interested groups—including, of course, the executive departments of the Government—to try to reconcile their separate views in a united recommendation for the congressional leaders to review.

Developing a recommendation on which all can agree is not simple, because many divergent and competitive interests are involved in the Sugar Act. And of course all sugar legislation must be designed so it will equitably serve the interests of American consumers, both as to supply and price. I don't have to tell you that the administration of the act has been at least fair to consumers.

All of you know that the present Sugar Act expires at the end of this year. You will recall that we in the sugar beet industry, in cooperation with other segments of the domestic producing industry, had hoped for renewal last year, during the last session of Congress. The industry sought extension of the law last year, a year before expiration, so all could plan ahead with assurance and so the dangers of ill-considered action inherent in hammering out legislation at the 11th hour, on the eve of an expiration date, could be avoided.

In this connection, early in the last session—in fact, on January 12, only 5 days after the 1959 session began—your two Michigan Senators, Senators HART and MCNAMARA, together with Senators YOUNG and LAUSCHE from Ohio and PROXMIRE and WILEY from Wisconsin, joined with 41 other Members of the U.S. Senate in introducing a bill to extend the Sugar Act. Several bills were also introduced in the House.

But our legislative effort came to naught last year primarily for one dramatic reason—or perhaps I should say because of one man. You will recall that a year ago at New Year's time, the man with a beard came triumphantly out of the Sierra Maestra Mountains down in Cuba and took over the Cuban Government. This man told the Cuban people and the world that he was going to drive out of Cuba "the tyrants and the dictators," and establish a "real democracy" for our Cuban friends.

At the beginning there was a great deal of popular sympathy in the United States for this man. His announced intent to benefit the underprivileged of Cuba, a policy which we assumed would be instituted democratically and enforced equitably, appealed to the general liberalism of the great mass of the people of this country.

To begin with, I believe, many of us were tolerant of the flamboyant statements he made; we charged them off as boasts made in the first flush of victory. After all, in the course of a few hours his position had changed from that of a hunted man in the mountains to unquestioned master of his own country. The new leader of Cuba, we thought, would settle down and bring order out of the chaos that immediately followed the revolution. We hoped he would establish a sound political and economic democracy—which all the good people of Cuba want and deserve—a constitutional government of law and order; of freedom, not of military prisons; of respect for individual rights, not fear of another dictator's mailed fist.

But we all remember what happened in the next few weeks. We remember the bloodletting. We remember the tirades against the United States when some persons here dared to protest that the firing squad was not an instrument of democracy. Along in the spring of last year it became only too plain that affairs in Cuba were not settling down.

Accordingly, at the request of the Government and on the advice of Members of Congress, the domestic sugar industry abandoned any effort to bring about consideration of the Sugar Act in the last session. It was then hoped that before the next session—the now current session—the Cuban situation would have clarified. It was hoped that economic and political stability would prevail in the Pearl of the Antilles. It was hoped that by now the atmosphere would be such that normal friendly relationships between the United States and the Cuban people would again be possible.

Well, as you know, the climate has not improved. The unfortunate situation in Cuba today is much more discouraging than it was in the spring of 1959. Our high hopes for an early restoration of normal relations with a friendly Cuba have been smothered by the torrent of abusive, anti-American statements—and by overt acts against American citizens, including representatives of the free American press who have been thrown into jail and expelled from the country for seeking and writing the truth about the Castro regime.

The present situation in Cuba makes it difficult to know how the provisions of law affecting Cuba should be treated in any extension of the Sugar Act. The Cuban situation also colors the consideration of a change which should be made in the law with respect to the manner of reallocation of Puerto Rican deficits. The Cuban situation did not bring about the need for this change, but conditions in Cuba make the change more imperative.

In the last 3 years Puerto Rican deficits have totaled almost 800,000 tons, an average of 264,000 tons a year. Although a spokesman for the Puerto Rican sugar industry has recently explained that it is possible for the Island's production to make a dramatic comeback, most students of the situation anticipate that substantial deficits will continue to occur in Puerto Rico. Almost two-thirds of the recent 800,000 tons of Puerto Rican deficits have gone to the domestic beet and mainland cane sugar areas. Under terms of the present law an increasing proportion of future Puerto Rican deficits will continue to go to these two areas.

The charge has been made that this feature of the present law causes a maldistribution of sugar supplies within the United States, resulting in an alleged shortage of sugar in the Northeast and an oversupply in the Midwest. Of course there has been no actual shortage of sugar in the Northeast as alleged. And of course under the act more raw supplies from offshore areas other than Puerto Rico can be routed to the Northeast and less to the refiners supplying the Midwest. Accordingly, we have hoped that the situation would in time correct itself. However, it is evident that the market conditions on which the charge is based still persist, and consequently the law should be changed to provide for Puerto Rican deficits to be allotted to ther areas normally supplying raw sugar to the Northeast.

The allocations of Puerto Rican deficits to the domestic beet and mainland cane sugar areas in recent years have eased the pressure on these areas for higher basic quotas. Even so, the demand for additional beet acreage remains unsatisfied. In light of this fact, and if the domestic beet and mainland cane areas are to relinquish their rights to future Puerto Rican deficits, their basic quotas must be increased in line with their present and immediate future production and marketing potentials. Such basic quota increases are particularly desirable now at a time when the need for more reliance upon domestic continental sugar production is underscored by the present uncertain Cuban situation. Exchanging Puerto Rican deficits for comparable fiat additions to their quotas will enable these areas better to program their production and selling operations, will facilitate general administration of the law, and should ameliorate some of the market conditions said to be created by the present Puerto Rican deficit situation.

Despite the conflicting views of the various interests involved, we are happy to be able to say that there is complete agreement among domestic producers and refiners that additions to the domestic beet and mainland cane quotas totaling 200,000 tons—150,000 tons for beets and 50,000 tons for cane—should be made in the next extension of the act. It is hoped that the industrial users of sugar, who have often indicated their belief that the present Puerto Rican deficit provision should be changed, will feel that this is a practical way to handle this problem at this time.

Obviously the chief concern of American sugar consumers, like that of the U.S. sugar industry, is an assurance of adequate, dependable and timely future sugar supplies at prices fair to both interests. The correction of the Puerto Rican deficit provision would contribute to this objective.

In light of the present Cuban situation another hole in the law should be plugged. In any extension of the Sugar Act the President should be vested with power, in the interest of national security, to cut the sugar quota of any foreign country for any given calendar year.

With such a provision in the law American sugar consumers would no longer need to worry about almost one-third of their normal sugar supplies being jeopardized by Castroism. Under such a provision other foreign countries, with governments friendly to the United States, could, if needed, bring in sugar equivalent to any cut made in the Cuban quota for this reason. Many such friendly countries already have available surplus sugar stocks. With this additional power the Cuban quota could be cut, if such action is required, and replacement sugar provided for, at a time and in a manner which would best protect the interests of the United States.

With Castro still heaping vilifications upon the American people, the American Government, the American Ambassador to Cuba, the Vice President, and the President of the United States, it is understandable that some people feel strongly that Cuba's quota should be cut, and drastically cut, right now. To many people it is unthinkable that, because of the current Cuban situation, farmers in America who risked their lives to fight communism in foreign lands should be denied for still another year the right to grow more sugar beets. It is hard for others to understand why the United States does not award more generous quotas to nations now friendly to the United States.

A more reflective view, however, is that we should not let our justifiable anger at Castro blind us to the effect that drastic action at this time would have upon the Cuban people. Nor should we forget the fact that the Cuban people in the past have made substantial contributions to the workability of the American sugar program. Cuba has never yet failed to supply her allotted share of the market, even at times when international incidents sent the so-called world market soaring, and she could have sold her sugar for more money elsewhere. Domestic sugar interests have always had a sympathetic appreciation for what the Cuban people have done. And we should like to preserve for the Cuban people in the future the opportunity to continue to maintain a responsible role in supplying a significant portion of the sugar the U.S. market requires—in spite of the poisonous provocations of their present anti-American leaders.

At the same time, a simple extension of the law without change for any period would not correct the Puerto Rican deficit problem, would not give American consumers the added protection they now need, and would not give the President of the United

States the additional negotiating power he needs in the interest of the national security to deal with Castro. In fact, a simple extension of the law without change would condone Castroism.

A simple extension without change actually would give Castro more U.S. quota than he now has without any strings to it. This would be true because in the present law Cuba's quota increases each year with increases in U.S. sugar consumption. On the basis of the average annual growth of the U.S. sugar market of 150,000 tons a year, a simple extension without change would increase Castro's quota about 50,000 tons a year.

An extension of the law for a reasonable period of time incorporating the desired amendments would benefit everyone having an interest in the Sugar Act—the American Government, U.S. consumers, the domestic sugar industry, foreign suppliers, and exporters who sell to countries from which we buy sugar. As the trend of events points dramatically to the importance of maintaining a sound, healthy domestic sugar industry, the need for advance planning becomes even more important to the Nation's welfare. The ability to plan ahead also contributes to more stable marketing of this sensitive commodity, and market stability is, of course, in the interests of all consumers as well as all producers.

Sugar legislation is likely to be up for consideration in the Congress in the next few weeks. I hope what I have said here will be of help to you in discussing this vital matter with your Congressmen and Senators. They know that over the years you sugarbeet growers and processors have made substantial and valuable contributions to the Nation's economy. Accordingly, we can all rely with confidence upon your representatives in the House and Senate to act wisely and sympathetically in your interest at the appropriate time.

United States Acts To Curb Drinks Aloft

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very enlightening article by Harry C. Kenney, staff correspondent of the Christian Science Monitor:

UNITED STATES ACTS TO CURB DRINKS ALOFT

(By Harry C. Kenney)

NEW YORK.—The Federal Government through the Federal Aviation Agency has taken a step to reduce the amount of drinking aboard airplanes.

The FAA rule governing the consumption of alcoholic beverages aboard aircraft provides that no alcoholic beverages may be consumed which are not served by the carrier, nor will alcoholic beverages be served to passengers who appear to be intoxicated.

There are teeth in the rule which states that enforcement will be carried out by FAA enforcement processes and which provide for civil penalties up to $1,000. The rule takes effect March 10.

The wording of the rule attempts to relieve the carriers from judging whether or not a passenger actually is intoxicated. Crew members may rely on the appearance of the passenger in determining whether or not to serve alcoholic beverages. Officials also noted existing regulations already forbid carriers from taking on passengers who are obviously under the influence of alcohol.

DIRECTNESS EXPECTED

From here on, the airlines are expected to be more direct in telling passengers of the new restriction and make suitable reports to the FAA of any known violations.

The crew members are not required to physically restrain a passenger who wishes to consume drinks that are not served by the plane. FAA said a crew member would be required to take direct action only when such action is necessary to the safety of the flight. This provision is already covered under existing regulations.

Already the FAA has received comments that the rule does not go far enough. Many have commented that the serving and drinking of alcoholic beverages on aircraft should be completely prohibited.

But FAA officials—noting their responsibility is limited to safety considerations—say that their studies show no facts to support the contention that serving alcoholic beverages to passengers constituted a safety hazard.

STEWARDESS POURS

Under the new rule, a passenger can take liquor aboard but the stewardess is supposed to pour the drinks. If the stewardess or steward feels that the passenger has had enough, then drinks can be refused.

There appears to be a number of reasons why the FAA has come out with this ruling. There has been an increasing number of complaints from pilots and stewardesses about the drunkenness and disorderliness of drinking passengers. Not only have such passengers proved to be an annoyance but in some cases have interfered with the proper operations of the aircraft.

During an interview with an official of the Air Lines Pilots Association, this reporter was told that soon there will be a bill introduced into the Senate which would abolish all drinking on airplanes.

For a very long time the pilots' association and the Air Lines Stewardesses and Stewards Association have been opposed to drinking on aircraft on the basis that it is dangerous to flight.

ABOLISHMENT FAVORED

A number of top executives have told this reporter that they wished liquor would be abolished on aircraft for a number of good and obvious reasons. Countless passengers and organized groups also have protested.

It is doubted whether this latest ruling will prove to be effective.

The ALPA official said that it is not the role of the pilots or stewardesses to "bounce" "high" passengers. In fact, there is a strong rule against pilots leaving the cockpit except under emergency circumstances.

If a stewardess accuses a passenger of being drunk and he is not, the carrier could get into trouble. If a passenger is drunk and he is refused more liquor, he causes trouble which should not be the responsibility of the stewardess or the carrier. If a passenger appears to be drunk and the pilot contacts the airport to have the man arrested, it is the carrier that is in the position of being the prosecutor. This it does not want to be.

ALPA says that it should not be up to the carrier, the pilots, or the stewardesses to enforce the law. Also, if the FAA is going to make these rules they should be responsible for them and provide the means for prosecution.

All of this underlines the point made by so many people and organizations within the airline field and out of it—that the problem of drinking aloft will be halted only when it is prohibited. This takes into consideration the FAA claim that too many people would go aboard drunk. There is major and mature thinking which contends that passengers would not go aboard in this manner.

In any case, airlines do not now permit passengers aboard who are obviously drunk.

INCIDENTS REPORTED

FAA said that their studies show no facts to support the contention that serving alcoholic beverages to passengers constituted a safety hazard. ALPA has submitted to the U.S. Senate Subcommittee on Transportation a list of incidents caused by intoxicated airline passengers which directly affected the ability of the flight crews to conduct their flights with the highest degree of safety.

The incidents were listed in six categories:

1. Attempts to enter the flight deck and interfere with the operation of the aircraft by the crews.

2. Causing disturbances in the passenger cabin—possibly under critical flight conditions and at the risk of bodily injury.

3. Inflight emergencies requiring unscheduled landings to remove inebriated passengers who are causing disturbances or hazards.

4. Inebriated passengers inadvertently actuating or damaging exit and pressurization devices in flight.

5. Fire hazards from inebriated passengers and refusal to comply with safety regulations.

6. Social and moral problems and effect of alcohol at altitude.

The FAA knows that even in a partial attempt at reducing the liquor hazard there are dangers involved. During the present rapidly developing jet age, jet speed requires that carriers, pilots and crew, and passengers conduct themselves at the best possible safety level.

It is the contention of many of those responsible for flight safety that abolition of liquor aloft is the only solution.

We Can and Must Do More for Our Older People

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. HUMPHREY. Mr. President, American labor unions have been particularly concerned about the problems of our older citizens who have retired from the labor force. The United Auto Workers of the AFL–CIO has done an outstanding job of helping its older members meet the problems of retirement, and the secretary-treasurer of the U.A.W., Emil Mazey, has written a very thoughtful article on the income, health and housing needs of our older citizens.

Mr. Mazey's article deals with these needs in a very sound, realistic and humanitarian way. Mr. President, I ask unanimous consent that this article from the January issue of the American Federationist magazine of the AFL–CIO be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE CAN AND MUST DO MORE FOR OUR OLDER PEOPLE

(By Emil Mazey)

We stand today on the threshold of an abundant life for all Americans. Our ca-

pacity to produce is unprecedented. This productive capacity is not confined to material goods alone. In the past half century we have made phenomenal progress in our capacity to prolong human life.

Through dramatic advances in medical research, public health, and sanitation measures, we have added about 30 years to the life span of the average American. This has been reflected in a vast increase in the numbers in our society in the older age groups. When we contemplate the means of providing a more abundant life for all Americans, we must give special attention to the needs and opportunities presented by this generation of oldsters.

In the past 25 years we have made significant progress in providing a measure of economic security for our senior citizens through income maintenance programs such as social security, old-age assistance and hard-won negotiated pension plans and other retirement benefits. But the fact remains that senior citizenship in America still remains a second-class citizenship at best.

The great majority of the 16 million Americans past 65 are living out their lives on drastically reduced incomes, without adequate health and hospital insurance protection, without much chance of income supplementation through employment and without proper social, educational, and recreational services in the community. Their basic problems are further complicated by the ominous prospect of social isolation, loneliness and desolation as relatives and friends pass away and mobility is diminished by chronic disease and disability.

To provide this important and growing segment of our population with a greater share of our potentiality for abundance is one of the great challenges faced by American society.

On the one hand, we must provide the basic security which those who have contributed so much to our society so richly deserve. On the other hand, we must strive to increase and extend opportunities for the older person to contribute to our society and maintain his dignity and self-respect, even though he is retired from full-time remunerative employment.

In line with this challenge, we in the United Auto Workers believe older people can continue to be useful and constructive members of our society. Our experience over the past 10 years with the more than 100,000 who have retired under United Auto Workers contracts has been that they continue to be valued and valuable members of our union.

This assumes, of course, that the individual has a reasonable prospect of meeting his basic needs for food, clothing, shelter and health, along with a reasonable opportunity to develop and pursue a useful role or function in retirement. In an abundant society such as ours, older people have the right to expect that we will help them to achieve these simple but fundamental objectives:

Sufficient income to maintain their accustomed standard of living.

Health, housing, education, recreation, and social resources and services in the community adequate to meet their emerging needs and problems.

Opportunities to prepare for useful and creative roles in retirement life that are consistent with their basic interests and abilities.

These are understandable and manageable objectives. What must we do by way of changes or improvements in social policy to help our older people achieve them? The best way to answer this question intelligently is to inventory the present status of programs and services for older people, identify the shortcomings and propose specific modifications and improvements.

More than 10 million of the 16 million Americans who are 65 and over are now drawing social security benefits. These benefits average slightly over $72 a month in benefits paid to individuals and about $110 a month in benefits to older couples. About 2,500,000 persons are receiving old-age assistance and the average payment is a little over $65 a month.

Low incomes among the aged are reflected in generally lower standards of living in all other aspects of their lives—poor housing, poor nutrition, and poor health. This results in an unnecessarily heavy drain on the economic health and welfare of the entire community at the point where the effects of cumulative social neglect result in critical physical or mental illness.

Decline, disability, and chronic illness are associated with old age when, in part at least, our basic social policy automatically downgrades older people economically and socially at the point of retirement. It is the UAW's firm belief that much of this can be avoided. We can afford the social and economic costs of a preventive program. In the long run, this will cost far less than a policy of charity measures to deal only with the crisis aspects of aging at the point of no return.

It would be idle to minimize the value and importance of the changes in benefit levels, scope of protection and coverage that have taken place in what is now the OASDI program since 1950. We firmly believe that these changes have made the program a far more effective vehicle for providing a measure of security for the aged, their survivors, and the disabled. We are just as firmly convinced, however, that it does not adequately cover their needs.

We know of no valid reason why, for example, the concept of a "basic floor of protection" should become sanctified as a basic principle of our social security system. No doubt the vision of millions of retired Americans with substantial savings, privately purchased retirement annuities and retirement income from industrial pension plans is an intriguing one, but it is essentially a false picture. The fact is that, for the great majority of retired workers, social security benefits are the major if not the sole source of income.

If the best we can do under the "floor of protection" idea is to provide below-subsistence-level retirement incomes for the majority of our retired population, it is time to consider adopting benefit standards reasonably related to the cost of decent living. This means basic reexamination of the whole benefit structure to ensure that retired workers share in the increasing productivity of our society along with all other groups.

The United Auto Workers are gravely concerned over the fact that the disability insurance program under the Social Security Act fails to provide immediate meaningful protection for a very substantial number of disabled workers. Consideration must be given to the income needs of those who become totally disabled under age 50, as well as to those who would be considered totally and permanently disabled under any standards and administrative procedures but the most severe.

Approximately 20 percent of UAW members who are retired under the total and permanent disability provisions of negotiated pension plans in the automobile industry are disqualified for disability insurance under the Social Security Act. Certainly the standards of the Government program should not be more severe than those of the Big Three auto companies.

The definitions of permanent and total disability under the Social Security Act as well as the implementing procedures ought to be reexamined and liberalized to conform at least to the realities of current industry policy and practice.

Congress should also give some thought, we think, to lowering the retirement age under the Social Security Act for both men and women and consider means for making special early retirement provisions for workers, displaced by technological innovations or geographic redistribution of industrial plants, who, because of their age, are unable to find other suitable employment. Under such a provision the older worker who is a longtime resident in an area of labor surplus could be retired without actuarial reduction of his OASI, provided he is on long-term layoff by his employer and the local employment office certifies that his prospects for new employment are improbable or impossible.

Such a provision would help immeasurably to meet the income problem of the worker who is now too old to work and too young to retire. At the same time it would tend to reduce the competition for the same jobs between the older and the younger unemployed.

Inflation takes its most tragic toll on the Nation's older men and women. Their lifetime efforts to provide for a measure of security, dignity, and independence in their old age are nullified by a relentless rise in living costs that erodes the purchasing power of their savings. Protection against loss of purchasing power has become a critical need of America's aged people.

While wage escalator clauses provide cost of living protection for the current income of most UAW members and several million other workers while they are employed, inflation still eats away at the value of savings they may have set aside for protection when they retire. And once people have retired, the overwhelming majority have no adequate protection for their pensions, much less for their savings, against further increases in the cost of living.

Government has a major responsibility for the prevention of inflation. When it fails to meet that responsibility through effective economic policies, it has a moral obligation to provide protection against rising prices for the retirement savings and pensions of older people, who are least able to protect themselves.

A specific method for providing such protection was recently proposed by Prof. H. S. Houthakker of Stanford University. As he points out, an essential characteristic required in retirement savings is freedom from risk. Under present arrangements this freedom from risk cannot be assured, especially to the small asset holder. As a means of solving this problem and providing small investors as well as pension funds and insurance programs with a genuinely risk-free and inflation-proof form of investment, Mr. Houthakker suggests the issuance of what he calls index bonds, that is bonds whose face value and interest payments would be adjusted in accordance with changes in the consumers' price index.

We in the UAW propose that the Government issue a special series of nonnegotiable bonds for purchase only by the trustees of pension funds, by insurance companies providing annuities for retirement purposes and, up to a specified maximum amount and under other safeguards, by individuals saving for retirement.

The redemption value of these bonds would include face value plus accumulated interest, plus an adjustment to compensate for any increase in the consumers' price index during the period since they were issued.

When purchased by the trustees of pension funds or administrators of annuity programs, such bonds would be available only to finance pensions or annuities which would also contain the same constant purchasing power protection. When purchased by individuals, the guarantee of constant purchasing power would apply only to bonds held by the purchaser until he attained a given age, perhaps 60.

Such bonds would help us to settle a very thorny problem which now troubles labor-management relations—the question of how to put into our pension plans automatic protection for the buying power of the pensions they provide. Corporations which employ UAW members have always resisted the incorporation of any automatic cost-of-living adjustments into pension plans because, they have argued, such a provision would subject them to unpredictable and possibly heavy costs.

We in the UAW have for some time recognized that older people need special protection against the ravages of inflation, because they are most vulnerable to it. Our 1957 and 1959 conventions adopted resolutions calling for the issuance of constant purchasing power bonds for this purpose. We strongly urge such action.

A more liberal distribution program for surplus foods would be a practical, inexpensive and immediate way in which to share our abundance with older persons. Under present policies and procedures many States and localities have no surplus foods distribution system even though they all have their share of needy aged who would benefit from the program. Many other States and localities have such restrictive eligibility requirements that only a small portion of those who would benefit from the surplus program are involved.

We have numerous examples of retired persons who are denied surplus foods because they have so-called liquid assets that exceed by a few dollars the amounts laid down in policy. Many of these people have exceedingly low incomes. The liquid assets they hold would probably not finance 1 week of serious illness, yet they are denied surplus foods which cost as much or more to store than would be involved in their distribution.

Adequate health care ranks high, we happen to believe first, among the unmet needs of our aged population. Public awareness of the need is reaching a point where continued neglect of the problem is becoming increasingly unthinkable. The debate now brewing, however, revolves almost exclusively about the method for meeting the need.

While we may hear a great deal about the alleged fact that any American who needs medical care can get it, regardless of ability to pay, this contention is largely irrelevant, for public assistance or any other types of free medical care are generally repugnant to most self-respecting Americans, whatever their ages.

When a choice, which cannot be long delayed, is made, it will surely be between an effort to bring most of the aged under the protection of voluntary health insurance and legislative action such as contemplated in H.R. 4700 to provide insurance for certain health needs for OASI beneficiaries through our social security system.

Ideological issues raised by opponents of the legislative approach are specious. The question is simply this: Which approach offers the more meaningful solution? To us, the superiority of the legislative approach is beyond question.

While the economic research department of the American Medical Association chooses to quibble over the validity of the often referred to statistic that 60 percent of America's aged have annual incomes of $1,000 or less, it is nonetheless clear that for most Americans old age is a time of diminished economic resources and increased health needs.

While there are conflicting, even competing, estimates of the number of retired persons now covered by insurance, it is surely debatable whether those covered represent much more than 40 percent of the population aged 65 and over. Only a Federal legislative solution offers any immediate prospect of something approaching universal coverage.

There is no justification in asking the current aged to wait another 3, 5, or 10 years while the voluntary system makes up its mind to get them covered.

The quality of the health insurance protection available to persons of retirement age is, at best, uneven. At its worst it may come close to being worthless. We have no assurance that continued reliance on the voluntary approach will bring forth any significant improvements in this regard. We do know, however, that a Federal system can provide a basic standard of protection which can be supplemented by a rich variety of private arrangements providing protection above the minimum.

Given the limited resources of the aged, the voluntary approach fails to provide them with any real relief from the burden for paying for coverage or can do so only at the expense of benefit adequacy. We need to spread the cost as broadly as possible over the working lifetime of people and over the working population of America. This can best be accomplished through social security.

It is for these reasons that our organization, as part of the organized labor movement in the United States, has made the passage of H.R. 4700 or similar legislation a major legislative goal for 1960.

Certainly we feel that any serious proposals that would broaden H.R. 4700 to include protection, for example, for the cost of drugs used outside the hospital, home care services, and medical care in the hospital would merit earnest consideration.

What is alarming is that medical costs and the costs of hospital and medical insurance continue to rise farther and farther beyond the reach of the majority of senior citizens. This is ultimately a burden borne by the entire population which can be met more economically and effectively through social insurance than through the catch-as-catch-can measures now being proposed by the doctors and the insurance companies.

Such legislation would materially improve the income maintenance situation for retired workers and would remove a burden from the voluntary health insurance program which has done so much to force costs upward.

Today one out of every four patients in our mental hospitals is 65 and over—more than three times their proportion in the general population.

Studies show clearly that the average State mental hospital is ill-equipped, from the point of view of staff and facilities, to deal in a positive manner with the mental health needs of elderly patients. Furthermore, there is a growing and rather well-founded suspicion that many older persons now in mental hospitals do not belong there at all.

Because of the lack of other appropriate facilities to care for him, the so-called senile patient tends to live out his life in an environment that only further contributes to his disorientation and decline. Many of these older people who end up in the morass of a mental institution could be better cared for at home, in nursing or boarding homes, in homes for the aged, in geriatric clinics or in community-centered mental hygiene and rehabilitation centers.

Most States and communities already have many of the resources to deal with this type of problem. What they lack is the technical leadership and know-how that an aggressive national program of research, demonstration, and technical assistance in the field of mental health for the elderly could provide. As a Nation and in individual States, we must reverse this trend toward making the mental hospital the dumping ground for our unresolved problems with older people who need better facilities of other types.

Another corollary of low incomes and consequent low living standards among the older population is the effect which this has on their housing. Although a considerable proportion, perhaps two out of three, of the retired persons in America own their own homes, these are usually older dwellings which become increasingly rundown as income from maintenance and repairs declines and physical capacity for do-it-yourself projects also diminishes. Furthermore, the older homes in older neighborhoods occupied by older persons are typically larger homes which are hardest to heat, to keep clean, to repair, and to maintain.

In general, studies of housing needs and preferences of older persons show that they want less space, a minimum of stairs and a maximum of safety features to minimize falls due to poor lighting, narrow, high-pitched stairways and raised doorsills. What older people need is smaller quarters on one floor, easy to maintain and keep clean, well lighted and incorporating simple safety features. Yet those over 65 are at a particular disadvantage in either renting or buying the kind of housing they need.

In a real sense, the housing needs of older persons are a part of the much larger problem of the housing needs of all low and moderate income groups in our population. What is needed is a comprehensive national housing program with special provisions to meet the special problems of older people, for the most part living on reduced incomes. This means that we must provide funds for more public housing for the elderly and must also provide financial incentives and leadership to States and localities in planning and building such projects. At the same time we must avoid housing concepts and programs which result in the segregation of older people in isolated apartment houses or retirement villages.

Institutional housing for the elderly is also woefully inadequate in both capacity and quality. Standards for nursing homes and homes for the aged in most States are largely paper standards.

Furthermore, little attention is given to the need for good medical care and rehabilitation measures that would restore older patients to a sense of dignity, self-respect and self-care. One little recognized advantage of the Forand bill, H.R. 4700, is that it would provide a sounder base for financing most nursing home care which could result in better facilities and higher standards of care and practice.

If the needs I have mentioned were more adequately met—liberalized and more flexible social security benefits, medical and hospital insurance, mental health services, and low-cost, specially designed housing—we would have taken long strides forward in achieving the basic objective of meeting the basic needs of retired workers for food, shelter, and clothing which would permit them to function in accordance with their accustomed living standards.

In addition, we must recognize that the fact of a particular chronological age of retirement does not alter their basic needs as people for the whole range of community services in the related fields of education, recreation, and social welfare.

It is obvious that retirement, to be an attractive alternative to work at the appropriate time in life, must not result in so drastic a reduction in income as to cause anxiety and hardship. However, there are other uncertainties concerning retirement which must be resolved if older workers are going to accept it and enjoy it. These have to do with the availability of opportunities for a constructive role in retirement—opportunities for social contact, education, recreation, and other health and welfare services.

The real issues we face in providing for an aging population in an abundant America resolve themselves down to a willingness to recognize and accept our respon-

sibilities and to a determination to plan and coordinate our efforts by establishing sound social policies and by providing effective machinery for carrying out these policies.

Will Small Packers Be Stamped Out of the Packing Business?

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. WOLF. Mr. Speaker, the present administration and the Department of Agriculture have been stressing the importance of competition in agriculture. However, in his recent order to stop Government lamb grading, Secretary Benson is bringing to a sharp halt the competition among meatpackers.

Let me illustrate. Under the present grading system Jones' meat with the "U.S. Good" or "U.S. Choice" marked on it is equal to Swift's Premium, Armour's Star, Wilson's Certified or Morrel's Pride. But take away the grade and you have Jones' unmarked meat competing against a large, well-advertised product. Without the grade, the small packer cannot receive as much for his meat and will eventually be run out of business.

This grading serves two purposes. First, this entirely self-supporting grading system makes the small packer's product equivalent to the large packer and helps keep our economy on a competitive basis. Second, it protects the consumers by assuring them that all the meat they buy is of top value.

Mr. Speaker, I would like to insert a recent article by Drew Pearson which appeared in the Washington Post. This article brings out very adequately many of the evils to the consumer and the small businessman if the lamb grading would end.

The article follows:

RULING DUE ON LAMB GRADING END

(By Drew Pearson)

Today is the day when Ezra Taft Benson will finally decide whether to line up on the side of housewives and farmers or on the side of the big meatpacking lobby in regard to the grading of lamb and mutton.

A closed-door meeting has been called in the Agriculture Department at which Secretary Benson will weigh the evidence pro and con meat grading. Meat Lobbyist Aled Davies, close friend of Benson's, will not be present. But from a distance, he will be watching over Benson's shoulder.

Davies, who is vice president of the American Meat Institute, is given credit for persuading the Secretary of Agriculture to abandon Government grading of lamb and mutton even though it costs the Government nothing and is an important protection to housewives and independent meatpackers. (The packers pay for the grading). Davies is close to Benson, was one of the family guests invited to the musicale at Anderson House, headquarters of the Society of the Cincinnati, when Benson's daughter, Beverly, made her musical debut.

In front of Benson during today's closed session, however, will be a voluminous stack of testimony from all sorts of people taken before the House Agriculture Committee, urging that Government grading of lamb and mutton be continued. The testimony is from such people as Miss Sally Butler of the General Federation of Women's Clubs; Fred Schneider of the American Steamship Purchasing Agents; Arnold Mayer of the Amalgamated Meat Cutters and Butcher Workmen; Charles Sullivan of the Division of Purchase and Property of New Jersey; Jim Hoge, representing the lamb producers of Virginia, West Virginia, and North Carolina; Irving Michelson of the Consumers Union, plus many others.

ENTERING WEDGE

"Government grading is essential," said Harold G. Smith of the U.S. Wholesalers Association. "Grading gives us protection against fancy sounding grade names imposed by the packers."

Most important of all, however, was a statement by Benson's good friend, Charles B. Shuman, head of the Farm Bureau, who has supported the Secretary of Agriculture on some of his most unpopular policies, but not on this one.

"We are strongly opposed to the discontinuance of the grading of lamb and mutton carcasses that was announced to be effective January 4," wrote Shuman. "We believe that discontinuing would be a step backward."

This testimony literally inundated Congress after Benson's order to stop lamb and mutton grading. Congress has now turned the testimony over to him. And the Secretary will have to decide today whether or not to reverse his own order and continue grading.

NOTE 1.—Many consumer groups fear that the ending of lamb and mutton grading would be the entering wedge for cutting out the grading of beef and all other meat, as desired by the big packers.

NOTE 2.—The House Agriculture Committee unanimously recommended that standards for mutton-lamb grading be continued but that standards be changed. Representative CLEM MILLER, of California, argued that it was not necessary to put so much fat on lambs to qualify as Prime and that consumers paid a higher price because of this extra fat. This change in standards will probably be made.

We're Exporting Jobs

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I would like to include the following article by George Todt. It appeared recently in the North Hollywood, California, Valley Times.

FOREIGN TRADE PLIGHT SERIOUS

"If you're trying to sell $3 labor in a 50-cent market, you're in trouble."—Auden R. Fredriksen, Minnesota Mining & Manufacturing Co.

Are American-made products in trouble when it comes to competition on the world market?

One conspicuous piece of evidence that such is the case lies in the fact that more than a million potential jobs have already been exported abroad.

These are jobs that an expanding population here in the United States needs desperately for the years immediately ahead of us. But foreign workers are tabbed to get them, not our people.

Could we be penny-wise and dollar-foolish, maybe?

Not long ago, I dropped in for a meal and a chat with Al Sorrentino, proprietor of Alphonse's Restaurant in North Hollywood, on Riverside Drive in the fashionable Toluca Lake district.

Al is a conscientious businessman who is keenly alert and awake to the pressing problems which our Republic is facing today on the world stage. He is somewhat short on scholastic degrees, but long on an even more important property—which is native intelligence. And what's more important than that?

I have seldom failed to find Al's ideas stimulating to me and this night was no exception. We immediately got into the world trade situation—which we have been kicking around for more than a year now—and found that our earlier predictions seemed to be coming true: the United States is presently seen to have a gigantic economic problem on its hands. And things are going to get much worse before they get better.

The awful truth is that a large portion of American investment capital is fleeing overseas.

It is going abroad, in many cases, because the world's highest labor costs have priced a great many of our products out of competition with European and Asiatic factories. Frankly, we're in a tight spot.

As the gentleman said in the quotation which commenced this column: "If you're trying to sell $3 labor in a 50-cent market, you're in trouble." I mentioned this to Al.

"And yet we can observe the incredible shortsightedness now going on at this very moment in the steel industry," Al told me. "A tremendous attempt is being made to boost labor costs upwards in this bellwether of American business. If it succeeds, what then?"

"Well, we can look forward to another round of wage-price boosts in all other industries after that," I replied "Then that ole-debil inflation will have his way with us some more."

"But how long can Americans permit costs of production to rise beyond the point where their goods can actually compete on their merits with those of foreign competitors?" Al asked me. "What about the law of diminishing returns? Doesn't it apply here?"

"One way to get around it if we were a socialist nation," I remarked, "might be simply to dump our finished products abroad for free in a superwelfare effort. Possibly under the auspices of the United Nations, or something. As a matter of fact, Victor Reuther has already made some such proposal, to the effect that we give away $10 billions of goods per year for 20 years to aid and uplift the global unwashed. Sounds very altruistic, of course."

"Altruistic in a pig's eye," exploded Al, mine host. "What Mr. Reuther really means is that since we can't compete pricewise with our oversea competitors by this time, we had better dump our surpluses abroad for free, at public taxpayers' expense, naturally, in what would amount to another multibillion-dollar subsidy."

"But such a plan would be intended to keep the work force busy and the wheels of industry turning," I reminded Al. "The idea of our Keynesian economic philosophers and deficit financiers is centered in taking people off the unemployment rolls, you know, even if they only produce gluts for the market which are not salable."

"Well, if this might keep up long enough," observed my friend, the able restaurateur, "maybe we can all make a living someday by taking in each other's washing. In the meantime, the flight of American capital is on, and hundreds of thousands of potential jobs continue to be exported abroad. What's the answer to that?"

It's a good question, isn't it?

Facing the Facts of Alcohol

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I call the attention of this Congress and of this Nation to a magnificent expression of concern about the use of alcohol by teenagers, by Miss Linda Jones, of Fort Mill Junior High School, daughter of Mr. and Mrs. Charles Jones, of Fort Mill, S.C. Miss Jones was recently declared winner of an essay contest held as a feature of Religious Emphasis Week conducted by the Fort Mill Ministers Association. Her essay was on facing the facts of alcoholism. I salute the accomplishments of this young lady and enclose as part of my remarks the essay which is attached.

The essay follows:

FACING THE FACTS OF ALCOHOL
(By Linda Jones)

"Youth Killed in Motorcycle Crash" screamed the morning headlines. The newspaper went on to state that the popular teenage boy had been trying to outdrink a friend just before he raced to his death. This tragic accident does not happen to every indulging teenager, but sooner or later his life will be dangerously affected unless he does wake up.

The problem of social drinking confronts most people at the college level or when they first go out to meet the world as it actually is. Temptations will and do come. Those trying to persuade others to drink often use the fact that people such as Jack London and O. Henry became famous because of the way alcohol spirited them. However, these two writers became famous in spite of their drinking, not because of it. Furthermore, social drinking will not help a person get ahead in the world. An executive of United States Steel Corp. stated, "The last man hired—the first man fired—the man who drinks."

Statistics tell us that there are in the United States approximately 100 million people 25 years of age or older. Thirty-five million of these do not drink. Of the 65 million who do drink, 48 million drink occasionally, 10 million drink about 3 times a week, 3 million are addicts, and 1 million are what are called chronic drinkers. The three times-a-week drinkers are those who get into domestic, social or business trouble because of their drinking. They can stop if they wish. The addict cannot stop when he wants to, but must have treatment. Among the chronic drinkers are those who have suffered physical and mental breakdowns.

Since alcohol is a narcotic, its use tends to become a habit. There is no way of predicting whether or not a person will become an alcoholic. The stages of rehabilitation of an alcoholic are difficult but have been proved to be effective, mainly through the efforts of Dr. Leslie E. Kelley with his gold cure.

The ways in which alcohol affects a person physically, mentally, and socially have been given. But, does it have any spiritual effects? The Bible answers it this way: "Wine is a mocker, strong drink is raging; and whosoever is deceived thereby is not wise" (Proverbs 20:1); Be not among winebibbers; among riotous eaters of flesh—for the drunkard and the glutton shall come to poverty and the drowsiness shall clothe a man with rags" (Proverbs 23:20-21).

In conclusion, what can teenagers do about the problem of drinking? There are more than 230 posts in the United States where organizations known as "Allied Youth" devote much time to the study of the causes and effects of drinking. However, every Christian teenager is obligated to take a distinct stand against alcohol in order to influence others so that they won't have to face the facts of alcohol the hard way.

Rules and Conscience

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. AUCHINCLOSS. Mr. Speaker, I am very much impressed with the calm, judicial way which the House Armed Services Subcommittee on Special Investigations has conducted its hearings concerning activities of retired military officers in using their influence to secure Government contracts for business concerns. This is a delicate and intricate subject and the committee has approached it in a broadminded but firm manner. The appended editorial from the Washington Post of February 1, 1960, is constructive and well worth while:

RULES AND CONSCIENCE

The House Armed Services Subcommittee which has recommended additional rules to curb possible "influence peddling" by retired military officers has done an excellent job, we think, of keeping this difficult matter in perspective. It might have concentrated on a narrow search for specific instances of apparent wrongdoing and neglected the broader but more significant picture which it has unfolded. This is that the great majority of the large defense contractors employ high-ranking retired officers, creating a situation in which the opportunities for undue influence upon the award of Government contracts clearly are widespread.

Of course it might be argued that since nearly every big company is involved, none has an advantage over the others and the practice even tends to be self-policing. But while this consideration may indeed account for the seeming absence of any serious abuses, it does not obviate the fact that the special knowledge and experience of many former high-ranking public servants are now at the disposal of private interests and in potential conflict with the public interest.

The subcommittee proposes that retired officers register with the Pentagon any employment by defense contractors, that they be barred for 2 years after retirement or resignation from jobs directly or indirectly involving "selling" to the Defense Department (with "selling" to a broadly defined) and that a code of ethical conduct be prescribed which would permanently bar retired officers from activities of various kinds that are too closely related to or based upon special knowledge gained in the service. Such requirements would not of course insure against all wrongdoing. But they seem to provide a fair balancing of the public interest and the private rights of retired public servants. They would set a wholesome framework for defense procurement activities, minimizing the occasions for possible conflicts of interest.

Rev. O. D. Dempsey: "Mayor of Harlem"

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper column:

REV. O. D. DEMPSEY: "MAYOR OF HARLEM"
(By Joseph Wershba)

The Reverend O. D. Dempsey is associate minister of the largest Baptist church in the world. He is an assistant to the Reverend ADAM CLAYTON POWELL, who is probably the most powerful individual in Harlem today. POWELL chose Dempsey 5 years ago as a potential leader in the city's Negro community, and Dempsey has returned the trust with a record of loyalty and selfless devotion to POWELL'S cause.

But it would be hard to find two other men who appear to be so different from each other.

ADAM CLAYTON POWELL moves in the grand tradition of the high-born, well-educated cosmopolitan who is a master at combining spiritual power—as head of the Abyssinian Baptist Church—with political power, as a longtime U.S. Congressman.

Oberia Davis Dempsey, on the other hand, sprang from a far different tradition; up from grinding poverty, toiling day and night for an education, tireless service for his people, and entering the ministry many years after most men usually make the choice.

He is a man of uncomplicated optimism that God is on the side of those who are righteous and who justly struggle for bread and dignity; but there is a constant sadness about him, making him look older than his 40 years.

The sadness was accentuated the other day—almost at the very moment that President Eisenhower was assuring the country that our fat-dripping prosperity would continue without stint—and Oberia Dempsey was proposing his minimum program for the needs of his community:

"A man ought to have at least some changing clothes, two meals a day, a place to sleep, and a job. These are the bare necessities. There are some who have less than that in Harlem."

Dempsey knows the problem at first hand, both in his church capacity and also as the elected "mayor of Harlem," a nonpaying job but one that had to be campaigned for as intensely as any congressional seat. In both posts, O. D. Dempsey has daily reminders of men in need of jobs, families in need of apartments when old houses are torn down to make way for new, of people without heat, light, and hot water, and neighbors who need him in court as a character reference for someone in trouble. He serves.

But if the outsider sees an O. D. Dempsey touched with sadness, he is missing the view from the inner eye. "I don't have any money, I'm still struggling, but I'm always happy," he says, "because I think I'm able to do things for people."

His home base is his church, at 132 West 138th Street, religious and social center for a vast network of community activities.

Oberia Dempsey (the name is derived from the Biblical Obadiah) was born in Paris, Tex., May 11, 1919, one of nine children. His father was a Baptist minister. Oberia was 14 when he left home to find work. He decided to work his way through school in Muskogee, Okla. He didn't know anyone in Muskogee and had only $4 when he arrived there, but a friend back in Paris had given

him the names of relatives in Muskogee—"and the relatives took me in."

Dempsey worked his way through high school, starred on the basketball and football teams, joined the church, NAACP, and local civic groups, was a lay teacher in church work, and made friends easily, Negro and white. He had a year at Wiley College in Marshall, Tex., and then in August 1940, enlisted in the U.S. Army. "And that's when life for me really began," he says.

He was a tech sergeant by the time he went overseas with the 349th Field Artillery. He saw action in five battles in France and Germany and was awarded the Bronze Star medal for meritorious service. After the war, he and his wife, the former Vivian Edwards, moved to Brooklyn and for the next 7 years Dempsey was the youth director of the Cornerstone Baptist Church.

The church was his avocation. He made his living, days, working in a mattress and spring factory. And he went to Brooklyn College, nights, for 7 years until he qualified for a degree in business administration and politics. He is now taking courses in religion and sociology at New York University. "The more I know," he says, "the easier it is for me to work here."

He had not planned to become a minister—"I had observed my father's sacrifices and felt it was just a little bit too much for me." But in 1953 he felt the call. He was permitted a trial sermon, and 10 months later he was invited to become assistant minister of the Mt. Lebanon Baptist Church in Brooklyn. That invitation led to his direct ordination in November 1953.

His religious, social, and civic work eventually caught the eye of ADAM POWELL, who finally prevailed on Dempsey, in 1955, to join him at the Abyssinian Church. He began as assistant minister. Seven weeks ago he was elevated to associate minister.

The Dempseys have four children. The girls are Janice Roslyn, 12, and Thealeta Monet, 11. The boys are Oberia Dewayne, Jr., 6, and Hurlan Lemuel, 13 months.

A Second Look at Kinzua

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. GOODELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorial which appeared in the January 24 edition of the Washington Post.

The editorial follows:

A SECOND LOOK AT KINZUA

The forced dispersal of a whole community is an irrevocable act, and ought to be considered only when no feasible alternative exists. This, in sum, is the core of the debate over the Kinzua Dam in Pennsylvania, a controversy which is still alive despite the fact that Congress has already approved funds for the project.

No one questions the desirability of a project intended to end the disastrous floods on the upper Allegheny River. But it is open to serious questions whether the only way the Corps of Engineers can achieve this end is by dishonoring a treaty with the Seneca Indians signed in 1794 by George Washington—the oldest treaty, to which the United States is a party and which is still in force.

Arthur E. Morgan, former Chairman of TVA, insists that a feasible, less costly, alternative to the Kinzua project exists. He has gone into the question in some detail, and he contends that the Corps of Engineers has in 30 years never made an overall examination of other proposals. Last year the House Public Works Subcommittee decided to freeze appropriations until Mr. Morgan's proposal had been fully studied. No such study was made; in the adjournment rush, the Senate's position prevailed and the funds were voted for Kinzua.

So far, work has not begun in earnest on the dam, and there is a possibility for Congress to take a more considered second look. This would, no doubt, discomfit the Corps of Engineers—but it would surely be welcomed by all who are disturbed by a seizure of Seneca lands for a project still in dispute. The relocation of a small group of Indians can hardly seem a minor matter in a country which is quick to denounce the manhandling of minorities elsewhere. Edmund Wilson, the distinguished literary critic, who has lately taken up the Indian cause, asks this troubling question:

"For whatever the difference in scale, is there any real difference in principle between uprooting whole communities of well-to-do Russian farmers and shipping them off to the Urals, and depriving the Senecas of the use of their lands in such a way as to scatter the republican unit and telling this intelligent and capable people to go and find homes where they can?"

The War We Are Losing

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DADDARIO. Mr. Speaker, the American people are rightfully concerned about the international position and prestige of this Nation in our accomplishments in space. The failure of the administration to recognize the importance of this area of exploration and its imposing efforts to keep the challenge from upsetting its neat fiscal plans have created some alarm.

This alarm is quite often expressed in questions to authorities that amount to what are you going to do about it. At the top, they get little satisfaction. At his press conference a week ago, the President asked rather sharply of a reporter who posed a perfectly legitimate question where he had the idea that international prestige was at stake. The President said he did not think it was, particularly.

This idea differs, of course, from that of Mr. Eisenhower's Chief of the U.S. Information Agency, who told the Committee on Science and Astronautics on the opening of our hearings into the space situation:

Space has become for many people the primary symbol of world leadership in all areas of science and technology.

Whether the White House is worried or not, the people are concerned. If they had all the facts, they might recognize that the picture is not nearly so glum as a contented Mr. Khrushchev may preach to the Supreme Soviet, but they would also see clearly that it does require effort, management, and determination—in short, leadership—which has not been too evident thus far. However, it has never been the practice of this administration to let the people know the facts, and the glowing reassurances of the Secretary of Defense over the weekend have continued this tradition.

The realization that all is not well has been spreading despite the soft sell of the administration. In a recent editorial in an outstanding newspaper in my district, the Hartford Times, the question is posed: "Can we wait?" The answer is a troubling one. I have found this editorial to be a most keen and perceptive analysis of this difficulty, and under unanimous consent I insert it in the RECORD so that all may read it.

The editorial follows:

THE WAR WE'RE LOSING

Excerpts from the transcript of the presidential press conference January 26, 1960:

"WILLIAM MCGAFFIN, of the Chicago Daily News. Mr. President, in view of the international prestige at stake, why are we not moving with a greater sense of urgency to catch up with Russia in the field of space exploration?

"The PRESIDENT. Just start at that again—how did you start it, how did you start that question?

"Mr. MCGAFFIN. I said, 'In view of the international prestige at stake'.

"The PRESIDENT. Is it?

"Mr. MCGAFFIN. Well, sir, do you not feel that it is?

"The PRESIDENT. Not particularly, no."

(Etc., etc.)

Thus the principal obstacle to American progress in space science was spotlighted. It is the President himself. Mr. Eisenhower has given testimony many times through his actions or lack of action, and now in a public statement to the press, that he does not consider this country's reputation and fate are riding on our rockets.

Our space program has a split personality. It is half civilian, half military. This dichotomy is a result of several factors, including first the reluctance of civilian scientists to work under military direction for the development of military missiles, and second the separation of space research into two departments, the civilians thinking about scientific progress and the soldiers and their civilian employees working on weapons.

If anyone doubts, with Mr. Eisenhower, that American prestige has suffered badly at the hands of the Soviet Union's space scientists, let him read a few foreign periodicals. Even our friends abroad acknowledge that the reputation of the United States as the world's leader in science, industry, and technology has taken a bad beating from the Russians. If Mr. Eisenhower at his press conference was talking just to justify the record of his administration, he is a mere politician. If he sincerely believes that our prestige has not suffered, he is very poorly informed and advised.

Later in his answer to Mr. McGaffin, Mr. Eisenhower mentioned the "good, hard, steady work" of American scientists in "keeping satellites in the air and getting from them more information all the time." Except that satellites operate beyond the air, not in it, this is not to be questioned. The American satellite program is a spectacular one indeed, and if it were the only one in existence it would startle the world. The trouble is that the Soviet program is even more spectacular. The Russians may not be getting as much scientific information about the environment of the earth as we are, but they are making a much deeper impression on the peoples of the earth.

Hanson W. Baldwin, military editor of the New York Times, is very well informed on

this matter. An article by him was published in the New York Times magazine on January 17 in which the achievements of Russian and American space scientists were well assessed.

Mr. Baldwin wrote: "There have been few at the top level of Government (and their influence has been small) who have stressed the importance of national prestige or evaluated the tremendous impact of space accomplishments on international politics and mass psychology." In those areas, Mr. Baldwin said, Russia is far ahead of the United States.

Mr. Eisenhower and other soldiers of his generation, though they fought a war in which no holds were barred, seem to have trouble understanding that the present cold war is a total war just as World War II was. The guns are not actually being fired, the bombs not actually dropped, but the threat is constantly there. The other weapons—economic, intellectual, and psychological—are being employed full force by the enemy. It is less important to the Soviet Union to gather data about radiation from the sun than to launch the first satellite, put the first living animal into space, take the first picture of the dark side of the moon, and recover the first human space traveler alive. The first three of these the Soviet Union has already accomplished. The fourth? Informed opinion favors a Russian victory in that, too.

The 10-year program put before Congress by the National Aeronautics and Space Administration aims at catching up with the Soviet Union by the late 1960's. Can we wait?

It is obvious that the present administration fails to recognize the importance of space research—not its importance to physical science but its value as ammunition in the continual propaganda war with Russia. What is needed most in our space program is an admixture of imagination and daring at the very top. We cannot expect those qualities of Mr. Eisenhower; they would be contradictory to the safe, conventional, and conservative essence of his being. We can only hope that the change of administration will not be too late and that it will bring with it a refreshingly new attitude.

The Surprising Case of the ILO

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. SCHERER. Mr. Speaker, in the December 1959 issue of American Opinion there are two articles which discuss the International Labor Organization, commonly referred to as ILO.

The first is "The Surprising Case of the ILO," written by Mr. William L. McGrath of my own city, a former U.S. delegate.

The second article is entitled, "What Communists Say in the ILO," by Don Knowlton, one of Cleveland's leading citizens.

In view of the fact that Members of the House will shortly again be called upon to appropriate money for the continuance of ILO, it is my feeling that every Member of the Congress should carefully digest what has been said by these two men who are in an excellent position to know the facts.

The articles follow:

THE SURPRISING CASE OF THE ILO

(By William L. McGrath)

I

The taxpayers of the United States are currently paying some $3¼ million a year to support the International Labor Organization. This is just another example of our tax money going for a purpose that few Americans know anything about. How many readers even of American Opinion are familiar with the ILO, and what it does? Most of you know, I presume, that it is affiliated with the United Nations. But are you aware that the International Labor Organization has been in existence for some 40 years, considers itself an international parliament, and is drafting basic laws on social and economic matters which are having profound influence upon legislation all over the world?

As the years have gone by you have seen one Socialist proposal after another introduced into the House and the Senate of the United States. Have you ever wondered where these things came from? Well, I can give you the answer. Many of them have originated in the ILO, which has for decades been the breeding ground of the international socialistic legislation.

The ILO originated with the League of Nations; with the idea that an international organization devoted to consideration of the problems of labor the world over would be a useful adjunct to the League, and an instrument on behalf of world peace. The League of Nations died, but the ILO kept right on going; and the United States joined it in 1934.

Then along came the United Nations, and the ILO hooked up with it in 1945. The ILO is, however, not under the direction of the United Nations. It runs its own show, and gets its own budget appropriations directly from member governments. It is, nevertheless, granted additional money by the United Nations for what the ILO calls its "technical assistance program."

The ILO as originally conceived was supposed to concern itself purely with questions dealing with labor. But at a meeting in Philadelphia in 1944 the delegates adopted a declaration which said, among other things, that "Poverty anywhere constitutes a danger to prosperity everywhere," and that people have a "right" to economic security; also that "It is the responsibility of the International Labor Organization to examine and consider all international, economic and financial policies in the light of this fundamental objective." By this device the ILO arrogated unto itself the supposed right to draft basic laws, on social and economic questions, for adoption by member countries all over the world.

II

Now let's consider the functioning of the ILO. It is unusual among international agencies because it is not composed solely of representatives of Government. At its annual conference held each June in Geneva, Switzerland, each participating nation has four voting delegates; two representing government, one representing employers, and one representing workers. The delegates are accompanied by advisers. Total attendance is usually over 600, with 80 nations represented.

At the annual conference, the ILO enacts proposals that are in effect drafts of legislation which it hopes will be enacted by member countries. These may be passed in the form of resolutions, recommendations, or "conventions." A convention—and pay close attention to this—is a draft of a proposed international law which, when ratified by member nations, stands as a treaty among them. By this means the ILO seeks to introduce standardized basic laws into countries all over the world.

The ILO has a governing body, composed of representatives of governments, workers, and employers, which serves, you might say, as its board of directors. I was elected one of the 10 employer members of the governing body.

The ILO has a permanent office in Geneva headed by a director general, with a staff of about 800 persons. This is known as the International Labor Office. It sends missions of technical assistance to countries all over the world, supposedly to help increase productivity, but I suspect largely to propagandize on behalf of socialism. It conducts research and makes investigations, the purpose and results of which are not clear. And it releases publications, the purpose of which is only too clear—namely, that of spreading propaganda all over the world on behalf of the ILO and the socialistic measures which it champions and promotes. And there is something unique about the Geneva ILO staff and personnel. They are all tax-exempt. Although they are deeply sympathetic with measures that will add to the taxes of every body else, they themselves pay no income taxes to any country.

III

In its earlier years the ILO devoted itself to matters directly concerned with labor. It enacted conventions, for example, on living quarters of seamen in the international marine service, on the employment of women in underground mines, on the employment of children in factories, or concerning safety provisions. But the ideology of state socialism was coming into ascendancy in Europe, and spreading to other parts of the world. The ILO fell completely under the domination of a social government-labor coalition. It decided that anything in industry, government, or social systems that in any way affected the working man was a subject for consideration by the ILO. The state socialists moved in on the organization. And in recent years the growing Communist influence in the ILO has provided additional support for socialistic proposals. The free employer delegates to the ILO have consistently and eloquently objected to the proposed drafts of international socialist laws fostered by the ILO; but they have been hopelessly in the minority, and outvoted on practically all issues. Let's review the basic principles of socialism as I understand them from my ILO experience, and then get down to specific cases.

In the United States we believe, as was said in our Declaration of Independence, that men are born with certain unalienable rights, and that government derives its powers from the consent of the governed. The principle of socialism is exactly the opposite. The premise of socialism is that all rights belong to government—and government then parcels them out to the people in line with its own divine judgment. I have sometimes said that the main purpose of the ILO is that of trying to substitute government for God.

The underlying theme of ILO proposals is always government regulation, government domination, government control, government direction, government supervision; all leading of course, in the long run, to government ownership of industry, government price control, and government dictation as to jobs and wages. There is no halfway stopping point on the road paved by the ILO. And for a start on specific cases, let's take the subject of collective bargaining.

It is certainly quite proper for the ILO to endeavor to protect the right of collective bargaining. But let me tell you how far the ILO is going in that direction. It has proposed that if most of the workers in an industry have signed a collective bargaining agreement, government should have the power to compel the rest of the workers in that industry to sign up likewise, regardless of whether or not they wish to do so. What the ILO wants is nationwide collective bargaining enforced by government decree.

But the Socialists go further than that. Some of them in the ILO have suggested that one-half of the board of directors of a company should be chosen by management and the other half should be chosen by the union, which would have an equal right with management to decide the course of action of the company. In case of a deadlock, the matter would be submitted to government. This would put government in the position of being the controlling factor in the future destiny of industrial enterprise. This scheme is known as codetermination, and it is the law in Germany today.

Next, consider social security. It may interest you to know how the ILO brags that one of its earliest and most successful technical assistance projects was its sending of two experts over to the United States to show us how to set up our social security system. For social security was born and bred in the ILO. And social security, according to the ILO, is still in its infancy. In 1952 the ILO enacted a convention entitled "Minimum Standards of Social Security." I want to emphasize that word "minimum" because it is the intent of the ILO at some time in the future to develop, God help us, what they are going to call advanced standards of social security. Under the title "Minimum Standards of Social Security," the ILO drafted an international law providing government benefits for practically "all the ills the flesh is heir to." It is a blueprint for the biggest giveaway program yet devised.

Under this proposal government would pay its citizens money for the following:

Any condition requiring medical care of a preventive or corrective nature, including pregnancy, and any morbid condition, whatever its cause.

Loss of earnings due to sickness or unemployment.

Survival beyond a prescribed age.

Employment injuries.

Babies. The government pays you for having them; the more you have the more money you get.

Child birth, including medical care and hospitalization.

Invalidity—which is defined as "inability to engage in any gainful activity."

Death benefits—that is, life insurance.

Originally included in this proposal was a provision to the effect that all life insurance must be compulsory and subsidized by government, and any insurance would be illegal unless government paid at least 25 percent of the cost of the premiums. This effort at socializing insurance was aimed at putting out of business insurance companies such as we have in the United States. This convention also contained provisions for socialized medicine, such as England now has.

Well, 3 years later we got echoes in the United States. A bill was pased by our Congress providing that if at any time after the age of 50 a man became totally disabled, and was so certified by the Government, he could collect the same amount of social security benefits that he would otherwise get after retirement at the age of 65. Think what that means. There is, in this bill, an opening wedge toward both socialized medicine and socialized insurance; and those provisions were lifted bodily out of the ILO convention on Minimum Standards of Social Security.

For example, the ILO convention proposes Government payments for invalidity, which it defines as the "inability to engage in any gainful activity." Our bill defines "disability" as the "inability to engage in any substantial gainful atcivity"—a change of only one word. Incidentally, the ILO convention says that a person may be ruled disabled as a result of "any morbid condition, whatever its cause." We can learn something from socialists. We used to criticize the bums and the hoboes who would not work. Now we must be more charitable, because we learn that their "inability to engage in any gainful activity" was merely the result of a "morbid condition."

IV

In 1952 the ILO passed a convention called the Maternity Protection Convention. It provides that:

(1) An employed woman should be given at least 12 weeks off to have her baby, with free medical care and hospitalization.

During this period she would receive from the government, in cash, an amount equal to two-thirds of her pay.

(2) A woman cannot be discharged while on maternity leave.

Interruptions for nursing the baby (and I quote: "In cases where the matter is governed by or in accordance with laws and regulations") are to be counted as working hours and paid for by the company.

I sat in the Committee on Maternity Protection, and at times I couldn't believe my ears. In that committee, representatives from countries all over the world spent an entire half day debating as to whether or not an international law should contain a provision to the effect that a mother should nurse her baby for 1 hour, during the working day, or for two half-hour nursing periods. As I recall it, France held out for two half hours, and Israel held out for 1 full hour. No conclusion was reached, for the reason, I imagine, that the men on the committee knew little about the subject, and the women on the committee seemed singularly unequipped for the purpose under discussion.

Apparently, in the golden days of the socialistic utopia, practically all women are supposed to work. Their babies are to be financed by government benefits. In due course the mothers will bring their babies with them to work, placing their offspring in government-run nurseries, and leaving their machines or typewriters to nurse them on company time. There is no distinction in this socialist planning between legitimacy and illegitimacy. The place of the father, married or unmarried, in this scheme of things, is reduced purely to the function of paternity. The state takes over, to a large extent, the functions of the family. It provides against a multitude of contingencies for which, in a free society, the husband and father is supposed to provide.

Under such circumstances, what becomes of the family? What becomes of the home? What is the object of the institution of marriage? What happens to the children, starting life in government or industrial nurseries? What are the people, save wards of the State?

In 1955, the conference discussed what they termed "welfare facilities for workers." The proposal stated that "competent authority" (meaning government) should prepare suggestions for the operations of canteens, feeding equipment, types of meals, balanced diets, food service, and feeding costs. The implication was that government should take over and supervise all phases of inplant feeding in industrial institutions.

At its 1955 conference the ILO enacted a resolution entitled "Vocational Training in Agriculture." Never have I seen a document more foreign to the philosophy of the United States. It assumed, as a basic premise, that the agricultural worker is an employee. It assumed that wages in agriculture are determined on the basis of collective bargaining. And it proposed the setting up of an apprentice system for young farmworkers.

Well, in the United States most of our workers are not employees—they are members of the farmer's family. They don't belong to unions, so the collective bargaining idea has no application in our country. And as for apprenticeships, about the only way this could be worked out would be for farmers' sons to be apprenticed to their fathers.

Furthermore, embodied in this proposal is a definite pattern of Government domination and control. The general idea is that the Government should take over the vocational training of all youngsters on the farm, in what the ILO calls a "systematic and coordinated program." This program provides that Government should supply school textbooks and other educational material, should pass on the qualifications of teachers and examination requirements, should subsidize educational facilities, and make sure that the education and training of young people on the farm would be done by the Government and not by their parents.

V

I don't think I need go any further. I could cite more examples. But I have given you enough to indicate the overall trend of the proposals which the ILO government-labor majority hopes to enact into basic laws which will be followed by countries all over the world. And if you think this is not happening, you are very much mistaken. Thus far the ILO has enacted 114 conventions. Of these, Great Britain has ratified 56, France has ratified 73, Belgium has ratified 58, Holland has ratified 49, Argentina has ratified 53.

You will ask, How many ILO conventions have been ratified by the United States? So here is the answer. Seven conventions have been approved by the Senate and ratified by the President's signature. Most of these deal with conditions of maritime employment and are not directly socialistic. There have been a few conventions that were approved by the Senate but not signed by the President; and a few that have been sent by the President to the Senate Foreign Relations Committee for action, with no action taken.

Now—why has no further action been taken with respect to these conventions? In recent years our Government, in ILO conferences, has voted in favor of a number of socialistic conventions on matters that would affect our own internal domestic affairs. Why have most of these never even been submitted to the Senate for consideration?

Frankly, I think the proponents of such measures have not dared to bring them out on the floor of the Senate. This is because the country and the Congress have been alerted to the danger of having socialistic measures imposed upon us by the back door of convention ratification. Remember, a convention, when ratified, stands as a treaty among the nations which have ratified it; and under our Constitution a treaty is a supreme law of the land. It was this fact that Senator BRICKER, of Ohio, so forcibly called to the attention of the Nation when he proposed an amendment to the Constitution of the United States to correct that situation. The amendment did not pass; but I am convinced that its proposal, and the debates that ensued, served to forestall and to defeat many efforts that otherwise might have been made to advance us on the road to socialism through legislation by treaty.

But in the rest of the world things have gone the other way. A major share of the social, labor, and economic legislation enacted in Europe and in many other parts of the world during the last 20 years has been born in the ILO. The South American countries and the underdeveloped countries of the Far East have been following the lead of the ILO. They have been told by socialist Europeans that socialism is the hope of the future; and that the kind of civilization we have in the United States is outmoded and in some mysterious way still lingering along, operating under old-fashioned concepts that are holdovers from the last century.

Meanwhile the Communist nations have been exerting more and more influence

within the ILO, as they have everywhere else. The fact is that the United States and Canada are practically the only countries left that are still operating in the main on the basis of the free competitive system. And that is an excellent introduction to the question of the ILO budget, and of comparative voting strength among its members.

The annual ILO budget, which is met by direct contributions from member countries, totals today some $9 million. Of this the United States pays 25 percent—that is $2,250,000. There are 80 member countries in the ILO, so the United States has one-eightieth of the votes. Let me repeat that contrast. We pay one-fourth of the ILO budget and we have one-eightieth of the votes.

Now let's go beyond that. At the outset, I said the ILO was costing the American taxpayers $3¼ million a year. That is because, in addition to direct contributions from member countries, the United Nations, last year, contributed $3¾ million to the ILO for so-called technical assistance. The United States furnished about a million dollars of that money, or about 29 percent—while our voice as to how the money should be spent is still only one-eightieth of the total.

VI

Now I want to get into the subject of the part that the Communists play in the ILO. It is a complicated subject, but an important one, because it brings squarely to the fore a basic issue which I think may prove to be unsolvable.

For many years prior to 1954, Russia had not participated in the ILO. But in that year the Russians came back, in a big way. And over the course of successive years they have brought their satellites with them.

There is now a solid group of 10 Communist nations in the ILO. First there is Russia; and Russia is in the ILO not as a nation, but as three—the Union of Soviet Socialist Republics, the Ukrainian Soviet Socialist Republic, and the Byelorussian Soviet Socialist Republic. This gives Russia alone three times the voting power of the United States. There are six Communist satellite nations: Poland, Bulgaria, Hungary, Czechoslovakia, Romania, and Albania. Then there is Yugoslavia, which is Communist and invariably votes with the other Communists. That gives the Communists 10 times the voting strength of the United States.

These nations always vote as a bloc. Normally, on most issues, there is a divergence of opinion among the government, worker, and employer delegations, from various countries, on the ILO proposals which are up for discussion. But not among the Communist nations. In their case, government, employer, and worker delegations from each country always vote alike; and the delegations from all 10 countries always vote together. The word goes out from the Communist Party, which is the boss, and that's that.

Now from the very beginning of the Communist reentry—that is, back in 1954—the employer delegates to the ILO, who, under its constitution, are supposed to represent free associations of free employers, contended that the Communist so-called employer delegates could not possibly represent free associations of free employers, because there were no such associations in Communist countries. Our claim was that the so-called employer delegates from Communist countries were simply government agents, and agents of the Communist Party. We tried, therefore, to have the Communist so-called employer delegates disqualified from participation in the conference. On that issue we were defeated.

Then we tried to keep the Communist so-called employer representatives out of the employer groups on the working committees which discuss and formulate ILO proposals. Starting with 1954, and continuing through 1959, the employers continued to take this stand. We met with very little success. The Communist employer representatives were first allowed to sit in these committees on a deputy basis; and then, in 1959, by the use of an arbitrary device which violates the ILO constitution, they were given full membership on such committees, with the same status as any other employer representatives.

Let me explain the employer's objection to having these people placed on employer groups of the ILO. The working committees of the ILO are tripartite; that is, on each committee we are supposed to have representatives of government, employers, and workers. But what happens if we get Communists officially seated as members of employer groups? The result is as preposterous as if the national Association of Manufacturers, or the United States Chamber of Commerce, should accept Communist agents on their Boards of Directors.

I simply could not accept such a situation. At the 1954 Conference I protested as strongly as possible, but to no avail. At the 1955 Conference I withdrew the United States employer delegation from participation in any ILO working committees upon which Communist so-called employers had been seated. I felt that a time had come to make a stand on principle.

At that time I got very little support for my action, and considerable criticism. But at the June 1959 Conference, when, as I said, it was ruled definitely that Communist so-called employers could sit with full rights in the employer groups of the ILO committees, the employers from forty-six nations withdrew, in protest, from participation in those committees. This was due in no small part to the effective leadership by the U.S. employer delegate, Cola Parker.

In past years, the U.S. State Department has followed the theory that the Communists and the Socialists were violently opposed to each other; and that the United States should support the Socialists because that would help us contain the Communists. This was a ridiculous assumption. It is true that in the ILO the Socialists and the Communists wrangle perpetually with each other. But in actual fact this means very little, because they are, you might say, simply two breeds of the same animal. What they are doing is competing for followers and political power, but their fundamental philosophers are really much the same. At an ILO meeting, which I attended, one of the worker delegates said, in substance:

"Why should free enterprise consider itself so important? It is free enterprise that has been responsible for many of the ills of the world. Now, fortunately, nationalized industry is coming to the fore and free enterprise can be put where it belongs."

Was it a Communist who said that? No indeed. It was Sir Alfred Roberts, the workers' delegate from England. I think the distinction between communism and socialism has been excellently stated by Earl Bunting, who said to me one day, "communism is the cruel force required to put socialism into effect."

The fact is that there is a fundamental cleavage within the ILO, and one for which I see no possible solution. It hinges upon the isue of nationalization of industry, Government regimentation and control, against private ownership of industry, freedom of the individual, and freedom of competition.

Each year the situation of the free employers has ben growing more impossible; and each year they have been louder in their objections to it. Each year the Communists have been getting more insistent upon forcing teir points, and more resentful when they fail to win some of them. Each year the Communist orators in the ILO have been growing more violently abusive of the United States, to such a point that, frankly, I cannot understand how the representatives of our Government can sit there and listen to the accusations.

If things keep on getting rougher, I would not be surprised if some day the ILO blew up with a bang. And I must say that I, for one, would not be disappointed.

WHAT COMMUNISTS SAY IN THE ILO

(By Don Knowlton)

Supporting the preceding article, Mr. Knowlton has sent us a few excerpts from addresses of Communist delegates before the plenary session of the June 1959 Annual Conference of the International Labor Organization. This meeting was attended by the representatives of 80 nations. And, as Mr. McGrath emphasized, your Government is paying out over $3 million per year of your tax money to give the Communists a forum and an opportunity to tell lies about us.

"As a result of the slackening in economic development, one of the most important social problems affecting millions of workers in capitalist countries at the moment is that of mass unemployment." (Mr. Goroshkin, Government delegate, U.S.S.R.)

"The capitalist world is in need of sound social organization. But we cannot agree that social and political disorder * * * arises as a result of maladjustment. The fact is that the workers do not wish to adjust themselves to exploitation and they never will. Hence such social and political disorder is absolutely inevitable in capitalist countries." (Mr. Popovich, Workers' delegate, Ukraine.)

"American experts have found that by a better distribution of the social product a far larger population could be supported in the United States than is the case at the present time. And yet, as we know, the United States has several million unemployed, while further millions are living in poverty. This is not the result of a growth in population. The fault is to be found in the economic structure, in which the greater part of the population enjoys only a very small part of the national revenue while millions of people starve, despite the enormous food reserves and the frequent destruction of food stocks to maintain artificially inflated prices." (Mr. Shvidchenko, government delegate, Ukraine.)

"Unemployment in capitalist countries is a chronic social evil for millions of workers and their families. * * * The self-styled free employers seek not to satisfy the needs of the population but to get the maximum profits. This is the economic law of capitalism and it is independent of the will of man." (Mr. Pasek, workers' delegate, Czechoslovakia.)

"Tens of millions of tons of coal stacked at pitheads, millions of barrels of oil which cannot be economically disposed of, stacks of undisposed textile goods, foreshadowing a crisis in the textile industry, a critical situation in shipping and shipbuilding—those are some of the characteristics of the present situation of the capitalist economy as a whole." (Mr. Chajn, Government delegate, Poland.)

"Reality shows us that the monopolies are seeking more and more to restrict trade union rights and freedoms. They wish to weaken the trade union organizations at any price. * * * The U.S. Government is already applying antiworker legislation and new antiworker texts are at present being drafted." (Mr. Mihai, workers' delegate, Rumania.)

"It is true that an American continually speaks about free economy, and the free play of economic forces, and that he terms his system as that of a competitive society. But such concepts are just a part of national tradition and have little, if anything,

to do with reality. The time of free initiative and free competition has gone forever." (Mr. Januszewicz, employers' delegate, Poland.)

"I know that in many countries the desire to achieve maximum profits induces the capitalist leaders to introduce various methods of compulsion, such as the so-called scientific organization of work, the main characteristic of which is an exaggerated intensification of individual labor." (Mr. Volik, employers' delegate, Ukraine.)

"We, in the Socialist countries, know that our workers need not fear the consequences of automation; leaders of industry in the capitalist countries, on the other hand, do not consider themselves responsible for their workers' fate and dismiss them when they are not longer needed." (Mr. Surguchev, employers' delegate, U.S.S.R.)

"For the monopolies, the cold war, wherever and however it is waged, is merely a source of profitable business." (Mr. Slipchenko, Government delegate, Ukraine.)

"We heard a representative of the Government of the United States who, having collected all the lies and slander from the garbage can of imperialist propaganda, spoke to distract our attention from the serious problem of defending the workers' real interests." (Mr. Pimenov, workers' delegate, U.S.S.R.)

Let Us Not Forget Our Veterans—Address by Emanuel Targum

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. TELLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of a speech delivered on January 17, 1960, at Rochester, N.Y., before the western district council and the executive committee of the Jewish War Veterans by Emanuel Targum, State commander of the Jewish War Veterans. Mr. Targum, who is one of my constituents, is a distinguished leader active in community affairs, and he has made significant contributions in the relation of government to veterans' problems.

The following is Commander Targum's address:

ADDRESS BY EMANUEL TARGUM, STATE COMMANDER, JEWISH WAR VETERANS

Ladies and gentlemen, in three great wars since the birth of this century, millions of Americans have given their lives, their limbs and their hearts to a lofty ideal—the ideal of freedom.

They served in their country's uniforms, from the Argonne to the Rhine, from Pearl Harbor to the Bay of Tokyo, and from the southern tip of Korea to the Yalu.

In those days, we were called soldiers, sailors, marines, and airmen. Now, we are called veterans.

In those days, our country was grateful for the sacrifices we made, and, when the guns finally fell silent and we were allowed to return home—those of us who could—our countrymen hastened to show their gratitude in every way they could.

Laws were passed to make it easier for us to buy homes and start businesses; we were given bonuses, larger pensions and disability payments; provisions were made for our widows and children; and every type of hospital facility was made available to us. Seemingly, nothing was too good for us—in the days when our country was grateful.

But, gratitude depends upon that most fragile of all qualities, the memory of man, and the memory of man—all too often, unfortunately—is short lived in such matters.

For some time, now, we, as veterans, have been seeing signs that our countrymen are beginning to forget our services. One by one, the benefits we bought with blood are being "repossessed."

The GI bill—our so-called "bill of rights"—is a good example. Our lawmakers drew a line through this bill one day and said—after some reasoning only they could understand—that anyone who had served his country before 1955 was a veteran—but anyone who served in our military forces after that year was not a veteran. For the latter, there is no "GI bill of rights."

Most of us here today will not be affected by this, but, in this action by our lawmakers, we can read a warning—a warning that in the future our country is ging to measure its gratitude more carefully.

If we need further evidence, we can call to mind the Veterans Pension Act of 1959 which goes into effect the first of July.

At first glance, this piece of legislation seems to provide veterans with a generous umbrella for their rainy days. But, does it? Actually, it provides a sliding scale formula for pension benefits, based to a greater extent than before on need, for all veterans and their dependents who go on the Veterans' Administration rolls after the effective date of the law.

Those of us who come within the provisions of this new law will have higher pensions—if we have little or no income. But, those of us who have been thrifty—who have managed to provide in some measure for ourselves—will not fare so well. The more outside income we have—the more we have earned through our own efforts—the smaller will be our pensions.

As an example, veterans with no dependents will get $85 a month under this new law if their annual income is $600 a year or less—but they will get only $40 a month in their pension check if their annual income is between $1,200 and $1,800 a year—less than half, in other words. Our Government seems to be telling us—"Don't be thrifty."

But, the point is, the pension provisions—along with many other provisions in this act—are far less generous to veterans than were the corresponding provisions of the previous law relating to pensions.

This is one more piece of evidence, if we need it, to establish that—one by one—the benefits we earned in France, Tarawa, and Korea are being "repossessed."

Once we were exempted from paying real estate property taxes, but this exemption is in the process of being dropped.

Ten of our States extended themselves in the case of Korean war veterans and passed special compensation laws affecting these men and women—but New York—the Empire State of New York, which has more Korean veterans than any other State and, by far, the largest treasury—was not one of these States.

More than half of the 50 States have rest homes for veterans and others are contemplating or planning the construction of such homes. Our own State of New York, however, is doing just the opposite—our State is getting ready to deprive us of one of the most useful rest facilities we now have.

In this case, I am referring to Mount McGregor.

Let me tell you something about Mount McGregor.

This facility has served the convalescent needs of some 30,000 veterans since its inception in 1945. Now, the State wants to convert it into an annex for the Rome School for Retarded Children.

As veterans, we certainly don't object to helping retarded children—that's a worthy cause if ever there was one—but we claim the State can find other means of helping retarded children without depriving veterans of a facility they need.

Nor can the State complain about the cost of this operation at Mount McGregor. The daily cost per veteran-patient at this facility is only $7.78, although 1,500 prescriptions are filled each month at the pharmacy, in spite of the fact that one-third of the patients require special diets, and in spite of the additional fact that 40 of the veterans are receiving active physiotherapy treatments of one kind or another.

Where else could these veterans go for this much-needed treatment at such a low cost to the State of New York? If this is a financial burden to our State treasury, it is possible—I have been told—that the Federal Government might be willing to supply some of the necessary funds for Mount McGregor.

On this point, it is interesting to note that if Mount McGregor is taken away from the veterans, and is turned over to the Rome School for Retarded Children, the State is going to be put to the additional expense of half a million dollars to effect this conversion. This is not saving money; this is taking money from one pocket to pay a bill instead of taking it from the other.

But, I am happy to be able to tell you today that we have not yet lost the fight to save Mount McGregor.

Last Tuesday, the top State officials of eight veterans' organizations—including your State commander—visited Governor Rockefeller and urged him to reconsider his decision.

The Governor said he agreed with us that veterans deserve and need special assistance in many cases. He argued that Mount McGregor was not rendering the service it could or should to veterans, and that they could obtain this service at some other facility.

We disputed that, and finally won his promise to postpone the decision to deprive us of Mount McGregor until he had considered the matter still more.

We have won no more than a delay in the fight to save Mount McGregor for veterans, but, at least, we have won that much. I think we still have a good chance to win the fight entirely, especially if each one of us lets the Governor know how much this facility means to veterans all over the State. What we need here is a determined show of strength.

You know—that's our secret weapon in this battle to preserve the benefits we have won on the battlefields of three great wars—our strength. As of last year, there were 22 million war veterans in the United States. That's a lot of votes in any election if we ever learn to use them the way we can.

Let's not forget—we had to fight a foreign enemy to earn these benefits. Let's not surrender them without a fight.

Repeal of the Connally Amendment

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DOWDY. Mr. Speaker, a copy of a telegram sent to the hearing before

the Foreign Relations Committee of the Senate, being a statement opposing the repeal of the Connally amendment, was sent to me with the request that it be inserted in the Appendix of the RECORD.

I, too, feel that it would be a mistake to repeal such amendment, and seek unanimous consent that the copy of such telegram be included in the Appendix:

HUNTSVILLE, TEX.,
January 24, 1960.

SENATE FOREIGN RELATIONS COMMITTEE,
U.S. Senate, Washington, D.C.:

I am informed that all persons wishing to testify on repeal of Connally amendment will have only the afternoon of Wednesday, January 27. Entire morning being given State Department who insist on this surrender of U.S. sovereignty over internal affairs. Please extend time of hearing so that all who wish to testify on this vital subject may be heard. Please advise by letter what domestic questions the advocates of repeal want decided by foreign judges of a one-world court and why they feel U.S. own court system inadequate on purely domestic cases. Also ask your honest opinion as to whether or not this constitutes treason to the United States and flagrant violation of oaths of office taken voluntarily by its advocates. Also ask this telegram be made part of official committee hearing minutes.

W. H. KELLOGG.

The Farm Problem

EXTENSION OF REMARKS
OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. BREEDING. Mr. Speaker, I would like to call the attention of my distinguished colleagues to the letter written by Mr. Francis Brinker, of Cawker City, Kans., to Life magazine in answer to their series of articles on the farm program. I thought so highly of Mr. Brinker's letter that I would like all Members of Congress to have an opportunity of reading it.

The letter follows:

THE FARM PROBLEM

DEAR SIR: As an introduction I would like to state that I am a farmer and I am proud of it. I live about 30 miles from the geographical center of the United States (before Alaska and Hawaii). I live on what I like to think is a family-sized farm for this area. It consists of 640 acres. All but 50 acres are under cultivation, 120 acres of which are irrigated. I am a full-time farmer. Every dollar I make has to come from the land. I own 320 acres (with the mortgage company) and rent 320 acres.

This area had one of the worst droughts on record from 1955 to 1957. Most farmers had to mortgage their land and machinery to stay in the business. 1958 and 1959 have been excellent crop years, yet with the disastrous prices at which farmers have to sell and the high costs of the things he has to buy, very few farmers, (including myself) have been able to reduce our debts incurred during the drought. How will we be able to survive the subnormal years if this situation continues?

In order to be as efficient as Secretary of Agriculture Benson claims the farmers should be I would have to expand the size of my operations, perhaps to several times its present size, but I am not financially able to do this. At present values my farming operations represent an investment of approximately $130,000, which consists of land (both rented and owned), machinery and buildings; yet I have a hard time to maintain an income equal to the minimum wage of labor. U.S.D.A. statistics show that the investment per worker in industry is approximately $15,000 per worker, yet their average net income for the past several years has been two to three times as much as the average net income of the farmer.

I have just finished studying, with great interest, your editorial and The Farm Problem (pt. III) in the December 14 issue of Life, which has prompted me to write this letter.

Your statement that, "Farmers themselves are just as fed up with the mess as everybody else," is the understatement of the year. We are the most fed up of all and rightly so.

The worst part of the farm programs of the past is that the farmer has lost so many of the freedoms so dear to him. In return for the loss of the freedoms, he has had the privilege (if it can be called that) of being the most underpaid person in our economy while the people of the United States are the best fed people in the world.

The thing that is so hard to understand is why so many people want to blame the farmer for producing too much of the good things of life (they should thank God that we have) while in so many countries they produce too few of these things.

To most farmers, including myself, Secretary of Agriculture Benson's philosophy is about as wrong as it can possibly be. He says that we have too many inefficient farmers. The truth of the matter is our farmers are too efficient. Let's look at it this way: If all farmers had been more efficient in the past our present so-called surplus could easily be several times greater than it is today. Production figures for the past 10 years will prove this to be true. What happens every time an inefficient farmer leaves the land? It does not stay out of production. Instead, a more efficient farmer takes it over and produces more, thus adding to the surplus. Most economists tell us that every time the supply of farm products increase 1 percent, the price will decline 6 percent. Many agronomists in our agricultural colleges tell us, if every acre of land was farmed in the most efficient manner, by using the best varieties of crops, best breeds of livestock and proper use of fertilizers, insecticides, hormones, etc., its possible to double our present production. If both figures are correct, the farmer would have to pay to get someone to take his products, long before he reaches this height of efficiency. How efficient must we become in order to make a living?

We hear so much about the law of supply and demand yet very little has been done to balance them. Industry has the advantage of being able to adjust their supply to the demand much easier than most other segments of our economy. In past years, labor had a problem similar to that of the farmer. There weren't enough jobs available for the number of workers. Their solution was simple, even though it was difficult to attain. They each worked fewer hours, thus bringing the supply of labor more in balance with the demand.

In order to balance the supply of farm produce with the demand there are only two answers. We either have to increase the demand or decrease the supply.

Increasing the demand is to a large extent out of the hands of the farmer because we just don't have enough people in the United States to consume all that we are able to produce. (The farmer of today isn't as worried about the United States being overpopulated as are the birth controllers.) Our foreign trade has diminished through the years. Its har dto say who has been responsible for this, but surely you can't blame the farmer.

There is no question but what the farm programs of the past, which have consisted of commodity controls, have failed completely in trying to decrease the supply. They have split the farm organizations into commodity groups and have become increasingly costly to operate. The surpluses have continued to mount, while the farmers have continued to go broke.

If labor had tried to solve their problem in the same manner as the past farm programs, they might have limited the number of people that could work in each industry, then those left over might have been told, "We don't have room for you in this country, you'll have to go some place else."

One of the duties of any good government is to regulate. Every time I hear the word "control" used, I can't help but think it belongs right along the side of the word "dictator."

Why not use the same method to solve the farm problem that was used to solve the labor problem. It is working for labor and it will work just as well to solve the farm problem. (Acres under production are to the farmer what hours are to labor.) Therefore, it's about time the farmer be given the opportunity to vote for the reduction of acres which would compare to the wage and hour law for labor.

The Secretary of Agriculture should be required to call a referendum to allow the farmers to vote on themselves a 20 percent reduction of all productive land. In order to vote in this referendum, proof should be shown that at least 50 percent or more of the voters net income is derived directly from the farm. It wouldn't be right for a hobby farmer or part time farmer to vote on a program for the true farmer.

The farmer should receive no payment for this reduction. The laborer doesn't get paid for the hours that he doesn't work, so why should the farmer receive payment for the acreage he doesn't farm? All profits should be derived from production or services, never from nonproduction or nonservices.

In return for this reduction the farmer should receive a guarantee that the Government will not release any Government-held farm commodity for home consumption at less than 100 percent of parity, nor will any imports of farm commodities be allowed to enter our domestic market at less than 100 percent of parity. This would require the Government to enter the import business, but it has been taking large losses in the exports of farm commodities. Why shouldn't it be allowed to make a profit on the imports to help cover this loss. It is impossible for the U.S. farmer (with his high costs of production) to compete with many foreign farmers (with their low cost of production) on many farm commodities.

It wouldn't be unreasonable for the Government to withhold from the domestic market, these commodities at not less than 100 percent of parity, because this would only be an assurance that the farmer might expect an income about equal to the minimum wage of labor. For example: According to statistics, in 1952 farm parity was 100 percent, yet the average income per person of farm people was $753 from farming, $271 from other sources, making a total of $1,024. For the same year the average income per person of nonfarm people was $1,973; which is proof that our present parity formula does not represent a true parity.

The goal to this program should be for the farmer to receive an income equal to nonfarm people. This investment is much greater, the hours of labor for most farm people are longer and his education requirements whether formal or otherwise are probably as high, if not higher than for

many other segments of our economy. So why shouldn't he be entitled to at least as much income?

Another necessary part of the program is a penalty for noncompliance. This penalty should be in the form of a tax of 20 percent of the gross farm income. This would stop the chiselers.

The agricultural land to be taken from production under this program should be handled in three separate categories; namely, grassland, irrigated land, and nonirrigated lands. This reduction should be based on a farm unit not to exceed 160 acres for cultivated land; a larger unit could be used for grazing land. The reason for this is to distribute the idle land and to assure that a more near average land will be taken from production. The idle land should be handled similar to land in the conservation reserve, so as to build it up for future use. Some economists predict that we'll need the full use of all our productive land within 20 years. I think that time is much further away, especially if we build up and conserve our soil as we should.

The reduction should be for a given period of time, such as the 4-year presidential term. Each time the reduction is determined the farmer should be required to change the area of reduction to build up the entire farm for future use.

Statistics show that for the past several years the overall supply has exceeded the demand by about 8 percent. The reduction will need to be greater than this to help absorb the present surplus and it will also take more than an 8-percent reduction in acreage to get an 8-percent reduction of supplies because the land taken from production would be the poorer land of each 160. Also, the land under production would without a doubt receive better care.

Under this program all of the cows at the trough in your cartoon on page 105 (December 14) should gradually diminish to nothing, with the exception of conservation.

I believe that conservation is everybody's responsibility. Most conservation practices are of just as much value to the city people of the future as they will be to the future farmers, because in times of shortages of farm products, usually the farm people are the best off. This generation has been making Government debts for future generations to pay, so the least we should do is to leave them some fertile soil.

The advantages of this program over the present program are: It would treat all farmers equal and the cost to the Government would be minor. It would regulate the supply rather than control individual commodities. The price of each commodity would be the balancing factor between commodities and it would give the farmer an opportunity to be on a more equal basis with the rest of our economy.

The big disadvantage to this type of farm program is that the cost to the consumer will increase, thus adding to inflation. But, in all justice this is a necessary evil. The decline in farm prices since World War II has been the big factor in holding down inflation. We have reached the place where the farmer can't survive much longer if this decline continues.

The history of the United States shows that all major depressions have been preceded by declining farm prices while nonfarm prices increased. Whenever farm prices declined to the point where the farmer's resources reached a low enough level, he was forced to quit buying. When this happened factories were forced to close, creating unemployment. The unemployed are poor consumers, therefore, these unemployed caused more unemployment until we were in a depression.

As a group, farm people are a minority today, yet they are still among the largest consumers of steel, petroleum products, rubber, etc., and whenever they are forced to quit buying, it will certainly have a big effect on the rest of the economy.

The United States is at present, enjoying a very high standard of living, through a false economy. This false economy is brought about by our defense spending and Government borrowing. Our Government is, in reality, spending the earnings of future generations.

Our defense spending is indirectly a subsidy to both labor and industry. Without it, it is very possible that the United States could be in a worse depression today than in the 1930's.

I am sure that most of the people of the United States would like to see the cold war come to an end, so they should also want the economics of this country in shape so that we might be assured of prosperity in peace, even though it might cause a slight increase in their grocery bill.

I firmly believe that any person that believes in the Golden Rule would agree to this program.

Sincerely,

FRANCIS BRINKER,
Farmer.

Privileged Imports: Major Textile Peril

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting statement on imports from W. Ray Bell, president of the Association of Cotton Textile Merchants of New York, as follows:

PRIVILEGED IMPORTS: MAJOR TEXTILE PERIL

From "10 Years of Cotton Textiles," December 1959:

"The chief roadblock in the way of extended textile industry recovery and the source of direst peril to future progress lie in the always mounting tide of imported fabrics and apparel whose origins now represent over 50 separate nations. Each of them enjoys the waiver by our Government of the statutory working conditions and social standards under which American textile mills are forced to operate. This means a privileged status of low labor costs for which there is no equalization in existing tariff schedules. Tariff reduction to impotency has long since been accomplished through concessions made in GATT negotiations. Many of the foreign competitors now possess ultramodern textile equipment supplied by American taxpayers and some of them share special benefits of large textile purchases by the U.S. Government either in the nature of offshore procurement or in the processing of cotton under triangular deals. The crowning discrimination against American enterprise and employment has been the U.S. Government policy of selling American grown cotton to foreign textile producers at a bargain price, now lower by 8 cents a pound or $40 per bale than the prices American mills are forced to pay for the same raw material.

"Under these existing and extraordinary policies of preferential treatment, foreign competitors have been equipped with overwhelming advantages in price competition. Sharing no responsibility for the maintenance of American standards, employment or taxes, they remain free to flood our markets will the products of ill-paid labor, made under any kind of working conditions, out of the bargain priced cotton endowed by our own Government or cheaper foreign growths. Over the past 5 years, the records of market experience show an unmistakable trend toward displacement of American goods through their inability to cope in price with the competition especially from Asiatic countries whose wage and labor costs are but a small fraction of American minimum standards."

W. RAY BELL,
President, the Association of Cotton Textile Merchants of New York, New York, N.Y.

The Late Hon. Thomas A. Jenkins

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. KEOGH. Mr. Speaker, in the early days of last month the Nation sustained a serious loss in the passing of a great and patriotic statesman, our friend and colleague, Thomas A. Jenkins. He had served with distinction, devotion, and wisdom in the House of Representatives for a period of 35 years. His public service actually convered a span of a half a century because of the previous offices he held as prosecuting attorney and State senator in his beloved State of Ohio.

It was my rich privilege to serve with this great American as one of his colleagues on the House Committee on Ways and Means. During the time of our mutual service I had opportunity to observe Mr. Jenkins' able work and I found him to be a man who addressed himself to his duties with compassionate understanding of the problems of all our citizens and with a dedicated comprehension of the basic concepts of human freedom, economic opportunity, and national strength—concepts that were inherent in the founding of our Republic that have been strengthened because of Tom Jenkins' work in our midst.

One important principle that motivated the endeavors of this great American was his insistence on fairness and equity for all the people. He worked diligently and with ability to try to improve our Federal tax structure so that its application to our citizens would be without discrimination and without unwarranted burden. In this connection it was my privilege to serve with him as a cosponsor of legislation that was known across the breadth of the land as the Jenkins-Keogh bill. This legislation was designed to alleviate the discriminatory treatment contained in existing law against self-employed individuals in providing for their retirement security. Tom Jenkins believed with conviction in the principle embodied in this bill because he recognized its justness and the merit it contained for the benefit of the American farmer, storekeeper, professional man, and the millions of other self-employed Americans.

Mr. Jenkins and I first joined in sponsoring this legislation in January 1953

at which time Mr. Jenkins introduced H.R. 10 and I was privileged to cosponsor H.R. 11. After years of perseverance and work in behalf of this constructive measure, we now seem to be on the threshold of what I hope will be the enactment of this proposal into law. If we are successful to this end, a large measure of the credit must go to our esteemed late colleague, Tom Jenkins.

I regret, Mr. Speaker, that Tom Jenkins will not be able to continue to serve in this distinguished body on the occasion of the final approval of his bill. I regret, Mr. Speaker, this great American's untimely passing, but I am grateful for the privilege that was mine in serving with him.

House Antitrust Subcommittee's Shipping Investigation—A Notable Public Service

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. KASTENMEIER. Mr. Speaker, the Members of the House, indeed all Americans, owe a vote of thanks to the House Antitrust Subcommittee under the chairmanship of the distinguished gentleman from New York [Mr. CELLER] for its investigation of antitrust and monopoly problems in the ocean steamship industry.

Through painstaking effort, which included a study of the activities of major steamship lines, associations, and conferences, and examination of over 100,000 documents in the files of these groups, the subcommittee has brought to light matters of the most serious import. These included hundreds of apparent and serious violations of various provisions of the Shipping Act and other statutes dealing with competitive practices.

The hearings held by the Celler Antitrust Subcommittee last fall in New York City emphasized the problems that arise when an industry is granted antitrust exemption such as that set forth in section 15 of the Shipping Act. The hearings established—as recognized by majority and minority members of the subcommittee—that in 43 years of responsibility under the Shipping Act of 1916, the Federal Maritime Board and its predecessors had been incredibly negligent in administering and regulating the maritime industry.

The hundreds of apparent violations of the act uncovered by the subcommittee were for the most part either unknown to, or unnoticed by, the Maritime Board. It is little short of amazing that, as the Chairman of the Maritime Board admitted, not once since 1916 had the Board or its predecessors taken punitive action against any shipping line for violating the strictures imposed by section 15 of the act. Thus the industry has been permitted to fix its own rates collusively and keep out competitors free from antitrust requirements and without imposition of the public safeguards that Congress wrote into the act.

As a result of the Celler subcommittee hearings, the Justice Department has begun extensive grand jury investigations into the maritime industry for possible violations of the antitrust laws, the Shipping Act, and related statutes. The Maritime Board has also inaugurated some 15 separate dockets to take action on some of the matters brought to light by the subcommittee.

The impact of the Celler subcommittee investigation and hearings may well be felt by every American who buys an imported article. Increased competition in the tradition of American free enterprise, and in a manner envisaged by the Shipping Act, could well bring lower freight rates. In many cases ocean freight is an important part of the selling price of imported goods. Moreover, the Federal Government is the largest single shipper of goods in the foreign commerce of the United States; consequently, reductions in the rates it pays will also redound to the benefit of the American taxpayer.

Mr. Speaker, a recent penetrating and cogent article by Bernard Nossiter in the Washington Post and Times Herald summarizes some of the effects of the Celler Antitrust Subcommittee's work. I commend this article to the attention of our colleagues.

The article follows:

SHIP LINES ACCUSED OF ILLEGALITIES—MARITIME BOARD SEEN "INCREDIBLY" LAX IN ITS JOB

(By Bernard D. Nossiter)

A little-noticed House investigation has jolted the shipping lines with charges of more than 300 possible violations of several Federal laws.

The inquiry by the Antitrust Subcommittee under Representative EMANUEL CELLER, Democrat, New York, brought bipartisan accusations of "incredible neglect" and "laxity" against the Federal Maritime Board.

That Agency, obviously distressed, has been building up its policing staff and has begun a closer watch in major ports over the lines.

The investigation, held last fall in New York, has also had repercussions elsewhere in Government. The Justice Department has set up grand juries in Washington and San Francisco examining the records of several dozen companies. The General Accounting Office is examining charges that the International Cooperation Administration was billed three times as much as private shippers for transportation of wheat and other aid commodities.

BOARD APPROVAL REQUIRED

A major portion of the Celler subcommittee's charges dealt with secret "gentlemen's agreements" between competing lines to fix cargo rates.

Under the 1916 Shipping Act, the lines are allowed to get together on rates and other matters free of antitrust prosecution—provided the Maritime Board gives its approval. The Board is supposed to prohibit pacts that discriminate unfairly between shipping lines, shippers, and ports, and harm U.S. trade. Any agreement not filed with the Board may result in a $1,000-a-day fine.

The House investigators came up with about 40 agreements never submitted to the Maritime Board; these yielded an estimated 105 breaches of the law.

One alleged violation, for example, involved a reported plan by a division of Moore-McCormack Lines, Inc., and the Farrell Lines to drive a Japanese competitor from the trade to South Africa. As the investigators described it, the two American lines would take turns cutting rates to spread the losses until the route was clear.

SECRET PACT ALLEGED

In another case, a group of companies that had filed their pact with the Board, agreed to go their own, competitive rate-setting way on cargo from Japan to the United States. However, the Celler group discovered what it contends was a secret pact between the big United States Lines Co. and the Barber Wilhelmsen group to fix tariffs.

A second big batch of alleged violations—CELLER said he found 141 of these—involved rebates. A rebate is a return to favored shippers of a portion of his freight charges and is specifically outlawed in the Shipping Act.

Among its findings the House unit turned up a pact between the American Export Lines and two foreign-flag companies, granting alleged rebates of 2 to 20 percent for several major shippers.

Some of the shipping company officials openly expressed their pain at the disclosures.

Vice President William Rand of the United States Lines, commenting on disguised payments made several years ago to an agent for some importers, said:

"I am personally ashamed of it. It is not within our company principles to behave in this manner whatsoever. If we hadn't gone into these lousy shenanigans, we never could have gotten the cargo."

The States Marine Lines was accused of inaccurately describing some cargo to give a lower rate. Vice president Robert G. Stone said, "We have absolutely no excuse. It was wrong, our people were wrong—ethically, morally, and every other way."

So many of the cases were spelled out in company files that Representative GEORGE MEADER, Republican, of Michigan, a subcommittee member, observed that "laxity of the enforcement agencies has induced a recklessness on the part of the shipping lines in the maintenance of these records. You are rather surprised to find them in the files of the companies."

A blunter appraisal was offered by Chairman CELLER. He said the Maritime Board "has been incredibly negligent" and "has not even offered a token gesture of enforcement." CELLER stressed that his evaluation applied to the Board and its predecessors in both Democratic and Republican administrations.

Chairman Clarence G. Morse, of the Maritime Board, has promised to check every case uncovered by the subcommittee. So far, he has marked down 13 for formal inquiry. Another 17 have been referred to the Justice Department, and staff investigations have been started in 72 more. In all, the Board figures the Celler group's listing can be boiled down to 102 cases.

Morse candidly said in a recent interview, "I was disturbed" by the House findings. He attributed them to a lack of policing staff and a "philosophy in the industry—not only by the carriers, but the shippers and receivers—that they do not have to adhere strictly to the law."

NO PENALTY IN 44 YEARS

While any shipping company guilty of a secret agreement can be fined $1,000 a day, no penalty has ever been assessed in the Shipping Act's 44 years. In the past, Morse said, the Board believed in showing violators the error of their ways rather than in prosecuting. Now, he said, he will seek penalties in at least some cases.

Morse is also increasing the regulation office staff from 33 to 41 and is adding 3 investigators to the 3 the board now has.

Board member Thomas E. Stakem has been put in charge of a special unit overseeing the investigations.

In addition, three new offices have been set up on the Atlantic, Gulf and Pacific coasts. Their chiefs will watch the rate-fixing meetings of the lines.

Morse, however, does not intend to deal strictly with the companies his board regulates. His three new field men will ask, not demand, to sit in on the rate-fixing conferences. "We're going down that path slowly," he said.

Despite the rich harvest reaped by the House unit, Morse won't send Board agents through the steamship lines' files to see whether there are other violations. "Under our system of government," he maintained, "that is not the way an agency of the Government should conduct its business."

PENALTIES NOT FOR ALL

He will not, he said, ask for penalties against all lines that have broken the law. Willful intent and the facts in each case will determine who gets punished, he said.

Moreover, he added that "100-odd violations over 15 years is not too far out of line for a big, active industry like shipping."

Timely Remarks on Our Agricultural Problems

EXTENSION OF REMARKS
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. KYL. Mr. Speaker, in view of the emphasis given our agricultural problems, and the attention drawn to farm subsidies, the following comments are most timely. They are drawn from a speech delivered in Iowa last week by Mr. Herb Plambeck, of radio station WHO, in Des Moines. Mr. Plambeck is recognized as one of America's leading farm editors:

Yes, agriculture is vital to America. Believe it or not, agriculture is the biggest buyer, seller, and borrower in the United States.

1. Farmers purchase farm supplies worth about $14 billion—if they have the money to buy—and there are lots of other things they need besides farm supplies.

2. There are twice as many jobs in industries serving farmers as there are farm jobs. Sixteen million Americans in manufacturing, processing and distribution are dependent on farmers.

3. The inventory of farm machinery alone is greater than the total assets of the American steel industry.

4. Many people think the auto industry is the Nation's most important. Agriculture's equipment valuation totals five times that of the auto industry—and this does not include the value of land and livestock.

5. The long steel strike certainly affected farmers. They use 6½ million tons of finished steel each year * * * that's more than the auto business uses.

6. Farms in America consume 17½ billion gallons of crude petroleum—more than any other industry.

7. That farming is "on wheels" is evidenced by the fact that 285 million pounds of raw rubber are used annually for farm equipment.

8. In global terms U.S. farmers make up less than 1 percent of the world's population, but they provide 20 percent of the world's meat, 30 percent of the milk, and 40 percent of the corn.

9. Recently, here in Iowa, we had new proof that food production is a key factor in international thinking—when Nikita Khrushchev paid Iowa a visit, and made it rather obvious that next to his talks with the President, seeing Iowa's agriculture was his No. 1 objective.

What is the reward? Just how are the farmers sharing in U.S. prosperity? One piece of evidence is that realized net income in 1959 is 12 percent under 1958. Let's look at broilers as an example:

Year	Produced	Cost	Sale price	Profit or loss
		Cents	*Cents*	*Cents*
1948	400,000	26.0	36	+10
1955	1,100,000	21.0	22	+1
1959	1,750,000	18.5	17	−1½

Red meats is another example: in 1951 21 billion pounds produced, $11.4 billion received; in 1957 27 billion pounds produced, $9.4 billion received.

I have pondered this question a thousand times—and so have you, and countless other have, too—and it keeps adding up to an unhappy answer—the more we produce, the less we get. How long can we continue to do this and remain solvent?

Permit me to mention a few facts of life about Government subsidies, as they apply across the board. In doing so I am neither praising nor condemning the principle.

First, we must recognize subsidies, to which Life magazine and a lot of others have taken strong dislike, have been with us a long time. The truth is, subsidies are the oldest economic principle written into the laws of the United States. In fact, tariffs, which are a subsidy originally designed to protect and promote industrial development in early America, were enacted into law when the first Congress convened back in 1789. They were enacted the first day of the assembly, and they stipulated a tonnage tax in favor of American shipping.

Subsidies have taken many forms since, but the tariff is with us still, preceding subsidies by about 130 years or so.

One rather significant subsidy was the granting of 6,340,000 acres of public lands to private interests for canal building, river improvement between 1826 and 1866. Another, 183 million acres of lands were given to the railways.

Through the years, it's been the same—and it's still going on. Mail subsidies came into being in 1845, and they're still going strong. Life magazine, in its vicious attack on farm subsidies, failed to mention it accepts a $9 million a year subsidy in the way of postal rates. Reader's Digest sees no objection to accepting $5 million while condemning individual farmers for taking a few thousand.

Lest I be misunderstood, I have not said the postal subsidies are wrong. The truth is, I am glad to have access to fine publications like Life and Reader's Digest, at prices I can afford. I know a little about the value of advertising, and how magazines and newspapers, along with radio and TV, provide us with a fuller life—and a higher living standard. I recognize the educational value of these publications.

The only thing I ask, and again I speak as an individual, is that the magazines who charge farmers as being government money-grabbers admit to the same crime. This they have not done.

This I submit is an injustice to the people of agriculture.

Countless additional millions have gone to subsidize shipbuilding. A recent example is a $40 million subsidy to build the luxury liner, the *United States*.

Airlines have been especially large beneficiaries.

There are an amazing lot of subsidies, and some of them add up to a surprising total. And what must be hardest to believe of all for farm critics is the relatively small number that apply to agriculture.

Cost plus is a subsidy and no one objected if cost plus was needed to get necessary defense items.

Depletion allowances in oil and mining industries are subsidy, and they total $23 billion. Business reconversion payments (including tax amortization) are a subsidy, and they total $45 billion in recent years.

Maritime organizations have a $3½ billion subsidy.

These figures are not my own. They have been taken from a U.S. Government Printing Office bulletin, and you, as a taxpayer, are just as much entitled to them as anyone else. It is called Government Subsidy in Historical Review, and you can secure a copy from your own Congressman.

The truth is, subsidies to business, industry, publications, transportation and other interests far exceed the amount agriculture gets.

For example, in the last 5 years, 50 large corporations have received over $80 billion in Government contracts, which though not labeled as subsidies, certainly represent significant financial help from the Federal Government. Why in Heaven's name can't we have the whole story told—a story that might make some of us cringe.

The postal deficit over a 10-year period, for instance, exceeds the total of the CCC farm programs for the past 25 years.

Capper's Farmer, a magazine that accepts postal subsidies like all the others, says that in the past 50 years, for every $1,000 this country has spent on subsidies, agriculture has received only $5. That's just one-half of 1 percent, isn't it? Moreover, Capper's points out that the American housewife, as she bemoans the fact that some of her tax dollars go for farm subsidies, forgets that the American consumer has benefited to the tune of $70 billion because food costs would have been that much higher without farm supports.

Meanwhile, there is still another aspect to the so-called farm subsidy. Dick Hansen, Successful Farming editor, now in Russia, called this to his readers' attention in July. He shows that the amount going to farmers is actually only half that charged to farmers.

Daniel Rice Co., of the New York Stock Exchange, made an interesting breakdown of the figures charged against farm subsidies. It showed farmers getting a total of a billion, and consumers getting about a billion. The rest should have been charged to the State Department for foreign relief loans repayable as in REA, soil conservation, which benefits all the Nation. The Forest Service, emergency relief, these are just a few.

The Rice Co., in its conclusion, appealed to the public to look at the true facts, and to recognize the prosperity of the farmer as the economic backbone of the Nation.

I believe that if, as the U.S. Chamber of Commerce suggests, we take away all the farm subsidies, the repercussions in business and industry would be overwhelming. That billion dollars that goes to farmers in the way of soil bank payments, or in commodity stabilization, or in ASP, etc., is a pretty important item if you happen to be in the feed business, or in the seed business, or in the machinery business. Or in a thousand other farm-related fields.

Presently, farmers are charged with one-tenth of the Government's total subsidy programs.

I say that because I believe that for America to stay strong, agriculture must remain strong, and unless there is a greater appreci-

tion of the contribution agriculture is making to American prosperity, unless present injustices are corrected, unless agriculture no longer remains an island of poverty in a sea of prosperity, America will not maintain its present position of strength and leadership, in a world crying for freedom and the abundance farmers must help provide.

The National Imperative Versus Carl Harris, American

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. HECHLER. Mr. Speaker, the technologically unemployed of this land, who have been callously ignored by the Eisenhower administration, have had no greater champion at this Congress than my able colleague from West Virginia, Mr. JOHN M. SLACK, JR.

In the January 31 edition of the Charleston (W. Va.) Sunday Gazette-Mail, largest newspaper in West Virginia, Mr. SLACK had an article which poignantly summarizes the plight of the unemployed and what could be done to help them. I ask unanimous consent that this outstanding article by Mr. SLACK be printed in the RECORD:

THE NATIONAL IMPERATIVE VERSUS CARL HARRIS, AMERICAN

(By JOHN M. SLACK, JR., Representative, Sixth Congressional District)

WHAT'S HAPPENED TO US?

In early 1959, when the impact of the 1958 recession was being felt most severely, I visited a number of communities in Kanawha and adjoining counties. In one of them I met and talked with an important and significant American. His name is Carl Harris. He is just 40 years old, married, and the father of seven children ranging from 4 to 16 years of age.

For many years he was a machine operator in a coal mine, but there has been no regular work in his trade for more than 2 years. Harris has no income. He owns no automobile, television set or radio, and has no access to a newspaper.

Long ago he exhausted 36 weeks of unemployment compensation benefits. He is months behind in his house rent, but the utilities still function. That's because he gathers scrap copper around abandoned mines and sell it to a junk dealer for 10 cents per pounds, averaging about $12 per month, which just pays the utility bills.

The backbone of his family's diet is flour, rice, cornmeal and other surplus commodities received from the surplus commodities program of the Department of Agriculture.

His wife will tell you that a few beans or potatoes would be a welcome change. The children breakfast regularly on gravy and oats, although sometimes necessity forces a change to cornmeal and water.

Among his neighbors these foods have earned the collective nickname of "molligrub," and they supply about one-third the amount of calories required to sustain normal health in a human being.

The children themselves show remarkably little bitterness over the fact that this skid-row diet has handed them a legacy of rotten, snaggled teeth, abcessed to the point where wholesale extraction is often necessary by the age of 13.

They do not even envy the children of those so amply blessed with good food that they can afford to throw eggs at Anastas Mikoyan and other unpopular visitors.

The Harris family is not alone. They are front rank veterans in a growing army of peons which now totals about 4 million Americans. Their condition is a manifestation of what happens when a socio-economic sore is left untended. They symbolize the classic tragedy—as did the ragged masses of refugees who flooded the highways of Europe during World War II.

The circumstances of Carl Harris today are the challenge that faces all of us in West Virginia who are attempting to effect a turnabout in prevailing economic conditions. For that reason Carl Harris is important to us.

He is significant also, because he represents the end-product of failure to master the several social and economic problems which follow in the wake of technological advance in industry. As of today, the State administration, the legislature, the congressional delegation, many public and private organizations, and hundreds of public-minded citizens have recognized the need of forthright action to reverse the prevailing economic cycle in some sections of the State.

By and large this general recognition has arisen only during the past year. With recognition has come determination, and excellent prospects for unified action at the several levels of our society. But in our planning, we must not underestimate the size of the task, or fall victim to the belief that any one public or private body can handle the job alone.

Make no mistake about it—we have entered the arena of combat with a Colossus whose size and strength is still unknown, even to the most informed economists in the United States.

At any given point in history, in any era or any country, whenever the massive force of catacylsmic change in the economic or political affairs of mankind develops an unrestrained momentum, and bends human quantities to its will, the elements of classic tragedy are present.

Carl Harris and about 1 million other American workmen are involved in such a change, caught and smashed between the hammer of productivity and the anvil of national economic and diplomatic policy.

They are the human beings behind the oft-repeated and little understood phrase "long-term technologically unemployed."

Their number is increasing, and their condition grows steadily worse, while their very existence casts a lengthening shadow that deepens from gray reproach to black omen for all of us.

HOW DID IT HAPPEN?

To ask how our present economic condition can exist in a Nation boasting the world's highest standard of living, with a high level of prosperity for nearly 15 years without major interruption, is to inquire into the fundamentals of our objectives as a people.

The traceable origins of today's technological unemployment can be found before the turn of the century but its more immediate source can be pinned to industry's "great leap forward" which began immediately after the close of World War II and has continued at a scarcely undiminished rate ever since.

The business community originally adapted and exploited the technological break-throughs of the war production years to meet a huge pent-up demand for capital and consumer goods.

After several rounds of wage increases by major unions, the business leaders pressed further into technological research simply to keep costs down in a time of rising wages.

In the beginning the process was relatively slow and orderly, as it had been for 50 years. Comparatively few workers were displaced, and they were able to adapt themselves to other livelihoods,, even as the wagonmakers and wheelwrights of 1900–1915 were able to transfer their skills to automotive manufacture.

Since 1950, however, the drive for industrial efficiency has slashed its way across the board, striking a dozen major industries and thousands of employers simultaneously.

For the displaced worker there is nowhere to go, and in this circumstance lies the immediate cause for the growth of a backlog of long-term technologically unemployed.

For a few years there was hope that the process would level out on a plateau which would permit new indutsrial development and population demand to soak up those displaced. That hope is now gone. Finally.

With the launching of the first sputnik, the drive for industrial efficiency got a massive injection of energy, and moved into a new pattern which may well be the pattern for the rest of our children's lives.

When Khrushchev smiled and restated his snarling challenge "We will bury you," into the statement "We will surpass you in a peaceful contest of economic advancement," the situation was confirmed.

Technological advancement under forced draft in industry is now an imperative—a pillar of national military and diplomatic policy. It is an absolute, because at all costs we must retain our topmost ranking as the first producer of goods and services for our people and our friends overseas. To fail in this is to lose the contest to the Soviet economic system before the eyes of the world.

We have accepted the challenge because we must. The Director of the Central Intelligence Agency, Allen W. Dulles, has said that Soviet industrial production is now about 40 percent of U.S. output, and is scheduled to grow by 8 to 9 percent annually, as it has for the past decade.

At this rate it will reach 60 percent of the U.S. level by 1970, unless American industry spurts ahead of its recent average 4½-percent yearly increase. If this is permitted to happen, Dulles says our lead will be "narrowed dangerously" by 1970.

We already have been put on notice that automation is the key to success in the economic contest with the Soviets. And we have been warned by leading experts on automation and computer technology that an inquiry into the economic and social effects of technological progress is a must because not only "individuals but also whole communities may be bypassed and thus create a "very dangerous situation for the Nation."

Aside from our ideological convictions and firm belief in the superiority of our way of life, it does not seem likely that we will lose a straight-out productivity contest with the Soviet Union or anybody else.

Our labor force is increasing at the rate of 860,000 persons per year and the Bureau of the Census estimates it will increase by 1,440,000 annually between 1970 and 1975.

Analyses of our productivity since 1900 establish that—with only 6 percent of the world's population and 7 percent of the land area—we produce more than one-third of the world's goods. The average American worker's output today in a 40-hour week is triple that of his grandfather in a 70-hour week.

The output for each man an hour in manufacturing has increased steadily in this country since 1908—an increase of 55 percent during the 20 years between 1909–1928.

But in response to the "great leap forward" (catch-phrase of Mao's Communist Chinese), output each man-hour after World War II jumped an overwhelming 74 percent in the 10 years between 1947 and 1956—an increase generally credited to technological advance.

One survey of business plans for new plant and equipment says American business ex-

pects a productivity increase of 3 percent an employee each year to continue until 1962, at least, and that this will be supported by over $34 billion in capital spending during 1960.

The same survey reports the business community expects, during the period 1959–62, an increase of 18 percent in sales, but only an 8 percent increase in employment.

But, if our economy expands at the rate of 3 percent a year with the average productivity increase per employee, it will mean that our national output will double in about 24 years, as gross national product rises from the present $467 billion rate to $950 billion per year.

All of these calculations are predicated upon the existence of a mass of regularly employed consumers, among other things.

In other words, we are masters of the tools of business economics, but we may fail unless we plan the disposition of our working and consuming forces more intelligently.

Last May, Secretary of Labor Mitchell issued a summary of the unemployed which said that there were 4,400,000 persons unemployed for 15 weeks or longer, and 700,000 who had been unemployed for more than 26 weeks. He acknowledged that this is the most serious aspect of the current problem of unemployment.

In mid-July, just before the steel strike made itself felt, Secretary Mitchell reported that total employment had risen to an all-time high of 67,600,000, but there were still 3,700,000 unemployed.

How is it possible to have more than 5 percent of the labor force unemployed in a time of unparallelled prosperity and record-breaking production totals?

The answer lies, of course, in the use of our new technology to the full range of business enterprise.

From small beginnings during World War II, down through a postwar decade of research and the spending of $5 billion by Government and industry in electronics development, we have now reached a stage where little cells, tubes and tapes can be combined to perform tasks which rival the magic of Aladdin's Jinn:

Computers design space vehicles, test flight characteristics of aircraft; solve logistics problems, forecast weather, plot the course of hurricanes; compose music, translate languages, predict genetic changes in fruit flies.

A thin magnetic tape gives orders to a $600,000 machine tool which shapes metal for an aircraft wing.

Six automated machines produce tailor-made parts for generators weighing up to 90 tons.

A new pushbutton coal mine digs, cleans, processes and loads 1,200 tons of coal an hour under the watchful eye of closed-circuit television.

A computer designs power transformers in 2 or 3 days which formerly required 3 to 4 months of engineering work. It has been educated to think like a handbook engineer, owners say.

In a Detroit automotive plant a giant machine snaps up 100 engine blocks an hour, flips them into 7 different positions and machines each one with 555 drilling, tapping, countersinking, reaming, boring and milling operations.

In a Louisiana refinery, a computer the size of an office desk, is in charge of mixing 6 million gallons of gasoline per day.

The list is endless, and it's all part of a production process defined by an industry leader as a series of technicial revolutions, comparable to shipping's change from sail to steam, but with each revolution superimposed on its predecessors.

But there is another side to this picture of streamlined efficiency:

A meatpacker shuts down 7 plants involving 4,500 jobs.

A refrigerator maker installs automation equipment costing $3 million and the work force is reduced by 2,200 persons.

A county coal association reports an increase of 357,000 tons of coal mined in a 4-month period, but notes the use of 1,000 fewer miners.

The length and variety of this list would match the preceding one, point for point, and the displaced workers can take small comfort from current assurances that automation will make more jobs for everybody "in the long run."

The most realistic and ominous statement is contained in a Department of Labor report issued last June in which an official pointed out that production recovery from the recession far outstripped man-hours worked, but admitted that "many jobs that existed before the recession are still unfilled, and perhaps nonexistent as improved technology has made it unnecessary to continue some jobs."

What has now become casually apparent to the Department of Labor has been known to more than a hundred Members of Congress for the past 10 years. They have watched the growing stagnation of communities in their districts and the gradual decline of living standards among their people wherever the power of technological advance has swept a working force into the dustbin of long-term unemployment.

They have also noted the regular appearance of what is probably the most useless publication issued by the Federal Government—a list of "surplus labor areas" on which the names of the same communities appear year in, year out, to the point where the list itself tends to become a catalog of futility rampant.

IS ANYONE DOING ANYTHING?

During recent years, scores of Congressmen, especially those from Pennsylvania, New York, Illinois, Kentucky, and West Virginia, have repeatedly described the need for a forthright program to reverse the economic cycle in areas weakened by this technological revolution.

So far all their efforts have ended in failure, not only in the enactment of legislation, but also even in attempts to obtain general recognition that a problem exists.

Naturally enough, the big unions have not viewed these developments calmly. Five of the largest industrial unions have suffered membership declines ranging from 100,000 to 400,000 members in recent years. They are aware that between 1947 and 1957, when industrial production was rising 40 percent, the number of production workers in industry rose only 1 percent. Meanwhile, nonproduction workers, chiefly white-collar employees, increased by 55 percent.

The record reveals that there has been virtually no increase in the number of jobs in the goods-producting industries during the past 40 years, despite a 66-percent increase in population.

But the next major impact of automation is scheduled for the office, where "computers * * * are going to be like bulldozers in the construction industry."

Nobody is safe, it seems.

The unions' answer to it is to gain protection through the bargaining process—wring the difference out of the employer or consumer. As a result, the recent steel strike, with its $5 billion economic loss in four months, was not a class over wages, but over administration of rules which determine the number and kind of skills in the work force.

A similar nub of controversy resulted in temporary settlements between the longshoremen and meatpackers unions and several employers. In the packers' case, the companies agreed to establish a fund to undertake research and develop programs designed to retrain and relocate displaced workers.

The teamsters have served notice that they may demand a royalty on every truckload delivered, starting in 1961, to "share the benefits" of increased company profits due to mechanization.

All of the foregoing adds up to the simple fact that we are paying for something we aren't getting.

We are paying out millions in unemployment compensation and agricultural commodity costs and billions in economic losses through strikes and negotiated labor-management agreements, and we will pay more each year in each of these categories.

In return, we gain nothing in knowledge or skill that can be brought to bear on the core of the problem of how best to exploit our technology to the utmost and thereby guarantee victory in the international economic race without creating additional thousands of hopeless drones each year?

As matters stand in Washington, we may anticipate continuation of many uncoordinated activities:

The Labor Department will issue employment statistics by the bale;

The Commerce Department will make small gestures at area redevelopment;

The Agriculture Department will distribute more fodder for consumption by the unemployed;

The Defense Department will dabble at placing military contracts in depressed areas.

And the President's Council of Economic Advisers will continue its weighty studies of long-term economic trends, politely overlooking this problem, as it has to date.

The air on Capitol Hill will be charged with vibrant proposals—for more unemployment compensation, a lower social security age limit, the 30-hour workweek, Federal financing to support area redevelopment, tax exemptions for corporations who locate in depressed areas, and a thousand others. Many of them undoubtedly have merit, but we have no yardstick by which their value can be judged.

We are well into a period which was foretold by a prophet—Prof. Norbert Wiener, the father of cybernetics (comparative study of control systems) whose work represents a major pillar on which the age of automation is being erected. A decade ago he described the shape of things to come and extended a thoughtful warning:

"The man who has nothing but his physical power to sell has nothing to sell which it is worth anyone's money to buy * * * the machine plays no favorites between manual labor and white-colar labor. Thus the possible fields into which the new industrial revolution is likely to penetrate are very extensive, and include labor performing judgments of a low level * * * the intermediate period of the introduction of the new means, especially if it comes in the fulminating manner to be expected from a new war, will lead to an immediate transitional period of disastrous confusion."

We have the new war, a cold, economic war. And the confusion is upon us, although we may yet avoid the disaster. In 1959, the Joint Committee on the Economic Report, 84th Congress, held extensive hearings on the general subject "Automation and Technological Change."

In its report the committee noted that "* * * many individuals will suffer personal, mental, and physical hardships as the adjustments go forward," but concluded that "* * * no specific broad-gage economic legislation appears to be called for * * *" above and beyond already existing areas of Federal interest contained in the Full Employment Act of 1946.

Since that time we have proceeded on a course which has added something new and quaintly American in the history of man's inhumanity to man.

We have mobilized the full power of our national effort in a way which virtually

guarantees the creation of new areas of insular poverty, in the penetrating definition of Prof. John Galbraith.

In the past such areas have evolved gradually because they fell out of step with economic progress; during the last 10 years, however, we have inadvertently arranged to create them.

No other democratic nation has ever done this to its own people as an integral part of its national policy.

If we continue to ignore the realities of long-term technological unemployment, we may reasonably expect developments of the next 10 years to parallel those of the past 10, and to have established by 1970 a built-in, hard core of 4 million unemployed, each averaging 3 dependents, or a total of 16 million Americans subsisting on some sort of dole at a cost of about $8 billion per year.

We may also anticipate a long series of tremendous labor-management clashes, causing billions in economic loss, or else the negotiation of collusive agreements which will burden the consumer and minimize the benefits of our technology.

WHAT CAN WE DO?

Before we can improve our position, we will have to admit two things to ourselves:

First, that we are engaged in a life-and-death international contest to maintain our top position in productivity and efficiency, and this effort will unquestionably cause methods, and machines to displace workers.

Second, that we have badly misjudged the impact of the new technology on our society and have been caught unprepared to deal with the consequences.

As to the first, the cold war may be a standoff for a century, and the standard bearer for tomorrow's world may well be the nation whose system offers the best hope for a full material life combined with maximum personal freedom from regimentation. A mass of 16 million half-starved American peons will hardly contribute to our stature in 1970, by which time Khrushchev boasts that the U.S.S.R. will match the American standard of living.

It's an endless circle. To hold world leadership we must use every means to spur technical progress in industry. We must even attempt to speed up the cycle of development and application by training more engineers and technicians through the National Defense Education Act.

At the same time, we dare not permit the machine to overwhelm the citizen. The answer appears to be to make a determined investment in what Prof. Theodore Schultz calls "the formation of human capital," a conscious effort to speed up human effectiveness based on capacities that develop from investments in man.

Four immediate undertakings suggest themselves:

1. A surplus agricultural commodities program which meets at least the minimum nutrition requirements for sound health. At least the equivalent, say, of the foods we were so quick to rush to postwar Europe. Considerations of humanity aside, if the long-term unemployed are not fed properly, they will soon be unable to work, and their families will be permanent charges of society.

2. Formal recognition by the President of the scope of the problem, and its relationship to national objectives, such recognition to be made manifest by appointment of a top assistant at near-Cabinet rank. The Secretaries of Labor, Commrece, Agriculture, and above all, Treasury, have an interest in this situation.

All of their activities bearing on the matter should be coordinated at once by a top-flight business economist-administrator, reporting directly to the President. Without the prestige of the White House behind him, no man can hope to untangle the mess that has developed.

In this connection let it be said at once that this is not a partisan issue, and has no proper place in the 1960 campaign unless injected by default. No one has fought harder against political, sectional, and White House indifference to the problem than a handful of Republican Congressmen from Pennsylvania in a Democratic Congress.

3. Institution of an immediate inquiry by a suitable group of experts into the theoretical aspects of the displacement of men by machines in an effort to develop a yardstick whereby counteractive programs may be planned.

Conduct of such an inquiry should be the most important obligation of the President's Council of Economic Advisers.

Somewhere there are signposts by which we may identify technological unemployment in its infancy, and somewhere there is a measuring gage to guide a practical course of action. Perhaps it lies in the application of a reverse of the leadtime principle for tooling and preparation which is fundamental to mass production. At any rate, there is an answer somewhere, and we must find it.

4. Pursuit of both Federal legislation and administrative programs designed to place the financial support of the Government behind short-term betterment undertakings to the extent practicable. Any program which will divert some of the Federal purchasing billions into the weakened areas will more than repay us in the years to come, and any program of physical improvements which will encourage private industrial development can be assured of manifold long-range return.

These are not the only possibilities, by any means, and if they are received only to be rejected in favor of superior suggestions they will have served their purpose. We cannot muddle through in the vague hope that our economy will expand fast enough to soak up all new jobseekers, plus those displaced by the growth of technology. The evidence against the chances of such a hope is not to be denied.

The present status of Carl Harris and his family is just around the corner for almost every one of us who must work to earn his daily bread. It advances, literally, with the speed of light, as the little cells and tubes wink their way forward with inhuman remorselessness.

White collar, blue collar, or no collar, there is no place to hide, so it behooves us to set about learning the dimensions of the problem that faces us and our posterity.

Barnett Sounds the Clarion

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address by the Governor of Mississippi, the Honorable Ross R. Barnett, delivered to a statewide Citizens' Council meeting in Columbia, S.C., on Friday, January 29, 1960. Mr. Barnett, a distinguished constitutional lawyer, and an ardent defender of the American tradition of States rights, has given the southern people as well as the alien meddlers something to understand and something on which to meditate. Mr. Barnett's address is one of calm and well reasoned advice. His firmness and positive admonitions demonstrate the type of man who will preside over the fortunes of the great State of Mississippi during his term as Governor. The mongrelists and the mixiecrats who have infiltrated the Democratic Party will find the South is determined to be on the defensive no longer.

Mr. Speaker, you will recall that some time ago I placed in the CONGRESSIONAL RECORD a speech by the Honorable HERMAN TALMADGE in which he gave notice to those who have infiltrated the Democratic Party of a similar determination on the part of our people to take the offensive. Gov. Ross Barnett again indicates that our forces are preparing for the greatest counterattack any way of life has ever undertaken. Mr. Speaker, I urge you, the majority leader, and every other Member of this body to read, mark, learn, and inwardly digest what Ross Barnett told the South Carolinians at Columbia, S.C., on January 29, 1960.

The address follows:

ADDRESS BY GOV. ROSS R. BARNETT OF MISSISSIPPI TO STATEWIDE CITIZEN'S COUNCIL BANQUET, COLUMBIA, S.C., JANUARY 29, 1960

Friends, it's good to be in South Carolina. I am particularly pleased that my first speaking engagement outside Mississippi since my inauguration is before this distinguished audience.

I am always happy to speak before such a distinguished group of men and women who are dedicated to the preservation of our way of life—and who are not afraid to stand up and be counted, even when it costs them $20 apiece.

Your most capable Governor, Ernest Hollings, honored my by flying to Jackson for my inauguration on January 19—and I said then that with Governor Hollings, Gov. John Patterson of Alabama, Governor-elect Jimmie Davis of Louisiana, and official representatives from Arkansas, Georgia, and Tennessee all present, it looked like some real southern unity was beginning to crystallize.

I am particularly grateful that some of the members of the South Carolina congressional delegation are present tonight. I'm sure we can all agree that Mississippi and South Carolina have two of the finest groups representing us in Washington of all 50 States. Some other States, to be sure, have bigger delegations—but the Senators and Representatives from your State and mine more than make up in quality for whatever may be lacking in quantity. If all 50 States were served by such capable and honorable men, this Nation would be in a far better position today.

Let me take this opportunity to pay special tribute to a courageous South Carolinian—a former governor of your State, now a U.S. Senator—the Honorable STROM THURMOND. We in Mississippi have the deepest affection and respect for Senator THURMOND. He has been close to our hearts ever since 1948, when he carried the South's banner so proudly by putting principles above partisan politics. Mississippi's late beloved Gov. Fielding Wright was Senator THURMOND's running mate 12 years ago—and these two dedicated statesmen conducted an admirable campaign.

This is one reason why the people of Mississippi feel so close to the people of South Carolina, and one reason why I am so happy to bring you the friendly greetings of all Mississippi.

The warm ties of brotherhood between our two States began during the infancy of our

Republic; they were strengthened immeasurably 100 years ago, when South Carolina and Mississippi made common cause with other Southern States in our battle against tyranny and oppression.

Friends, the bonds which join our two beloved states were forged on the anvil of freedom, and tempered with the blood of our most gallant sons. The years of adversity did not weaken the ties which bound us together; rather, they served to unite us all the more, and to arm us with renewed determination and dedication.

This unity among our people—in the Magnolia State of Mississippi and the Palmetto State of South Carolina, in Georgia and Alabama and Louisiana—is what makes the South truly great. It is the reason why I know that our cause will prevail.

This does not mean that the road ahead is an easy one. Our laws, customs and traditions will come under assault as never before.

Our people are determined—they must be ready to meet this new challenge. We must provide the leadership if we are to win this mortal struggle.

Yes, friends, this is a mortal struggle. But it is a struggle we can and will win if we cast aside petty differences and work with renewed effort for the preservation of our southern heritage.

Sad to say, there are those in your State and mine—and in the other Southern States—who put personal gain or political advantage above the common good. There are evil and sinister forces at work, whose sole desire is for the utter destruction of our southern system of biracial living.

Allied with these forces are powerful and corrupt elements in the North, with bulging treasuries, and exercising virtual control over most of this Nation's media of mass communications.

Although these groups are relatively small in number, they make a powerful lot of noise. And if the voice of the majority—the voice of the South—is to be heard, we are going to have to speak up loudly enough to drown out all their noise.

This, however, is not as simple as it sounds. What do we mean when we talk about "The Voice of the South"?

You know, the South actually has many voices. Perhaps part of our present trouble is that we have too many. As I see it, our problem is twofold: First, to separate the South's true voices from the false; and second, to find ways of making the South's true voices heard throughout our Nation.

The way things are now, the South's false prophets are held in high regard up North. I don't have to name them—you already know who they are: editors who sell their southern heritage for a byline in Look magazine; and politicians who turn their backs on their own people while seeking special favors at the national level.

You also know the True voices of the South—editors like Tom Waring in Charleston and Tom Hederman and Jimmy Ward back home in Jackson; political leaders like STROM THURMOND and DICK RUSSELL and JIM EASTLAND—and it must be our purpose to make those voices heard throughout our great land.

Friends, we hear a lot nowadays about moderates. In fact, this has become almost a sacred word with the northern press. They keep telling us that if all of us segregationists would shut up, then the moderates could sneak in and take over, and everything down South would be fine.

That all depends on how you look at it. If you were trying every way under the sun to integrate the races in the South, then things probably would be fine if the moderates took over.

A burglar would probably tell you that if all the policemen left their beats and went home every night, then he could take over and things would be fine—for him. But is that any reason for us to give the police force the night off?

Actually, friends, these moderates we've been hearing so much about are nothing more than southern burglars. They want to rob us of our priceless heritage, and they tell us that we shouldn't complain, as long as they steal it a little bit at a time.

Now if you surprised a burglar in your house tonight, and he told you not to worry—that he just wanted a little bit of the family silver—how many of you would stand idly by while he went on ransacking your home? You'd be foolish if you did—because if he finds out you're a soft touch, he'll be back tomorrow night and the night after and the night after that. And he won't be content with just the silver. Pretty soon, he'll be wanting your jewelry, and then your wallet.

Another expression we're being bombarded with these days is token integration. Well, here's my definition of token integration. That's when one of these moderates—these southern burglars—comes into your house and tells you that if you give him just a few of your valuables, he'll go away. Just sort of a token burglary, you might call it.

The only trouble is that once you reach in the cupboard or under the mattress for your bankroll so you can give him part of it, he's not satisfied. He wants it all. He'll tell you then that he needs another $100 for a suit of clothes, and maybe $5,000 more for a big, black limousine.

Where you make your mistake is to listen to him in the first place. As long as you keep giving, he'll keep taking. And isn't it foolish to give him anything until you're sure he's a burglar? Let's make these moderates take off their cloaks of pious phrases and professions of good will and brotherhood. Let's find out what sort of ugly race-mixing weapons they're hiding underneath their camouflage.

When a burglar has been making the rounds in your neighborhood, what do you do? Do you call all the neighbors together and arrange a conference with the burglar—a mediation or conciliation session, if you will? Do you greet him with outstretched arms and, holding your hat in your hands, ask him meekly: "Please, sir, Mr. Burglar, won't you leave us alone?"

Of course not. You first call on the authorities to come get the burglar. Then you go home and make sure you're ready to defend yourself, in case the burglar arrives at your house before the sheriff catches him. That's the only way to deal with any kind of burglars—whether they're after your money or your southern heritage. Be ready to meet them head on.

This is just good commonsense. People all over the country would agree with this, if they only knew the facts. But the facts are being kept from them. The people who control the big newspapers and magazines and television and radio networks keep their best brains busy, plotting new ways to hide and twist the true facts about the South.

And that's not all. These plotters aren't content with giving the Nation a totally false picture of the South. No, the northerners are also being brainwashed systematically about what's going on in their own back yards.

I dare say that we in Mississippi and you in South Carolina have heard and read more about the teenaged gangs of Washington and New York than residents of those two cities have been permitted to know. For example, we know that a large number of those gang members are not members of the white race. That's a provable fact.

But do the New York or Washington papers or TV stations tell their own people these facts? Mercy, no. They're afraid that what they call "race prejudice" might rear its ugly head.

That's the slick, Madison Avenue way of saying that if the people of New York or Washington really knew the true situations in their own cities, they'd be hopping mad. They'd be mad because police are ordered to keep hands off these young thugs—to treat them with kid gloves, while they go on robbing, stabbing, raping, and killing.

And people in the Chicago area tell me that they aren't getting the true story behind the attempt to build an integrated housing development in Deerfield, Ill. Several folks said that the only factual account they've read about the Deerfield situation has been in the Citizen's Council newspaper—published in Jackson, Miss.

The situation is pretty much the same throughout the North. If the people are kept from knowing the truth even about events in their own cities, they certainly can't be expected to have any accurate ideas about what's going on any place else—particularly in the South.

That's where we in the South face a big job. We've got to tell our story to the country, and we've got to do it now. Our story must be told in simple, unmistakably clear terms. The job must be done effectively and professionally. We have one big advantage in this struggle: The majority of Americans are still on our side.

Yes, friends, in spite of all the propaganda the race mixers can produce, in spite of all the phony "brotherhood" being talked, the fact remains that the average white American, wherever he lives, doesn't want integration. Maybe he doesn't know why—and maybe the propagandists have even aroused a little sympathy in him—but that's the way he feels. He doesn't want to integrate.

We in the South must capitalize on this feeling, before it's too late. We must give our northern friends our backing; we must show them that segregation of the races is based on right thinking. We must show them that mixing the races leads inevitably to the production of an inferior mongrel race. We must show the Nation that continued separation of the races is vital, if we are to preserve the greatness of America.

If we can give facts to our friends throughout the Nation, then the children of the North and West won't be brainwashed by their leftwing teachers.

The women of the North and West won't be fooled by the do-gooders and the social agitators.

And the men of the North and West won't be taken in by the phony economists, who rave and rant and argue that integration is good for business.

The rest of the country is ready to hear our story. In fact, they are, in many cases, begging to hear it. They need our moral support. And we cannot—we must not—let them down.

The magnitude of this project taxes the imagination. The scope it must encompass borders on the infinite. But we in the South will do the job, because it must be done. There must be cooperation between the Southern States as never before. There must be no petty bickering, no wasteful duplication, no diversion of time and energy from the vital task before us.

If each Southern State were to go its separate way, perhaps some good could be accomplished. But think of the multiplied good of a unified, cooperative program, with all the Southern States working together, pooling our resources and our talent, and armed with the certain knowledge that right is on our side.

To win this life-or-death fight, we must start with a total mobilization of all our resources. This has been delayed too long already. There is no room for halfway measures. We are going to enter this fight to win.

I have urged the people of Mississippi and I now urge the people of the South to respond

to this call for total mobilization. All of our resources—both public and private—must be fully utilized. There are certain fields where private agencies—such as the citizens' councils—can be most effective. There are other activities that the people should undertake through their State governments. Our leaders must get in step with our people.

The South's financial resources must be mobilized. We are currently enjoying the greatest prosperity in our history. Surely, we should be willing to divert whatever funds are necessary to win this fight, so we may continue to enjoy our prosperity.

We must mobilize our mental resources. The best brains of the South should work together to formulate specific programs in our drive to reeducate the North in fundamental American principles.

Our moral and spiritual resources must be mobilized. We know we're right—and we must show it in our everyday living. We must not apologize for being right; rather, we should assume the attitude of long-suffering, patient missionaries, laboring diligently to bring enlightenment to a people less fortunate than ourselves. The South has a great spiritual heritage—it is the stronghold of religion in America—and our moral and spiritual leaders should provide us with the kind of leadership we will need so badly if our cause is to prevail.

Finally, we must mobilize our physical resources. This means, frankly, that we must find out now who among us can be counted upon to do whatever is necessary to preserve our freedoms. My friends, physical courage is a trait sadly lacking in altogether too many of the South's so-called leaders. We must separate the men from the boys. We must identify the traitors in our midst. We must eliminate the cowards from our front lines.

And, friends, let me say to you tonight that in this respect Ross Barnett will do his best to provide Mississippi with the kind of leadership that comes from setting a good example. I am sure your officials can be counted upon to do the same.

Now up to this point, I've been talking about southern unity in rather general terms. That's the easy way—and the safe way—to do it. Everyone's in favor of southern unity, as long as you keep it in the abstract. And it's easy to talk in generalities.

But, friends, I propose to do more than just talk about southern unity. I propose that all of us begin here and now to take specific action which will achieve that unity we're all seeking.

First, I propose that the southern Governors really get acquainted with one another—that we create close, personal working relationships. That's one of the reasons why I was so happy to see Governors Hollings, Patterson and Davis at my inauguration in Jackson. We need to get together—to really know each other—to form close and lasting friendships. That's the way real unity begins.

The same thing holds true with the leaders in our State legislatures, and with other State officials. By exchanging visits, by keeping in touch with each other, by meeting together periodically, the entire leadership structure of the South can and should be molded into a solid group. We are all under attack by the same enemies—why shouldn't we get together to plan the ways in which we can win this fight?

Now you'll notice I said win this fight. I didn't say we should unite to defend ourselves. There's a world of difference, friends.

In my humble opinion, we in the South have too long regarded our State government merely as instruments of passive defense. We have been too hesitant in taking the offensive.

This is my second proposal—once our Southern leaders are united, we must launch a vigorous campaign to get the full power of our State governments into this fight as offensive weapons—to take an aggressive position—and to take the initiative away from our enemies.

One way we can do this is through the creation of special agencies in each Southern State to coordinate our efforts, and to finance this battle with public funds.

Mississippi already has such an agency—it's called the State Sovereignty Commission. And similar agencies already exist—or are In the final planning stages—in several other Southern States.

The law which created the Mississippi State Sovereignty Commission stated the Commission's functions in this manner:

"It shall be the duty of the Commission to do and perform any and all acts and things deemed necessary and proper to protect the sovereignty of the State of Mississippi, and her sister States, from encroachment thereon by the Federal Government or any branch, department, or agency thereof; and to resist the usurpation of the rights and powers preserved to this State and our sister States by the Federal Government or any branch, department, or agency thereof."

Now, the Mississippi legislature which adopted this act 4 years ago certainly didn't think that one State could do the job all by itself. Not at all. In fact, here's what our legislature wrote into the law regarding how the Commission should carry out its duties:

"The Commission may cooperate with one or more of the States of the Union, or any agency or agencies, commission or commissions thereof, or with any person or persons, corporation or corporations, oganization or oganizations, and may join with them or any of them, and pool such of the funds and resources of this Commission in carrying out the objectives and purposes of this act as may be deemed necessary and proper by the Commission."

Let me ask you—isn't this a fine example of southern unity already in being? Wouldn't it be wonderful if all the Southern States would create similar commissions, to work together toward our common goals? This is my third proposal—that each State create a special agency to work on this problem, in cooperation with similar groups from other Southern States, and also in cooperation with private agencies, such as the citizens' councils.

Ladies and gentlemen, the people of the South are already united. Just look at the thousands of dollars from all over the South that poured into Little Rock and to Virginia for their private schools. The people of the South already realize that what happens somewhere else today can have a profound influence on what happens at home tomorrow. And the people are anxious to do something about it.

Let me say here that the citizens' councils throughout the South are the one capable and responsible organization through which our people are making their strength felt through unity.

Friends, that's what our Southern State governments need, too—strength through unity. There's no need to waste our time in planning strategy until we have that strength mobilized—strength in our Governors, legislatures, private citizens, and organizations.

Then and only then will our views prevail. When we have the strength, the solutions to all of our problems will be easy. Our strength will give us the means of solving them.

My friends, the only way we can win this fight is to defeat the enemy—to destroy them before they destroy us. No victory can ever be won if we sit back and wait for our enemies to attack us. Our enemies wish we would continue such a policy. That way, they could pick off the entire South, one State at a time, concentrating all their propaganda machinery and all their high-priced legal talent on just one State.

But we are not going to fall into this trap. We still remember the words of Benjamin Franklin, spoken at the beginning of the American Revolution. Franklin said: "We must all hang together, or assuredly, we shall all hang separately." Friends, that statement is just as true today as it was in colonial times. The South must stick together if victory is to be ours. The left-wing elements in this Nation must be completely and utterly crushed—and that's just what we intend to do, using as our chief weapon the impact of nationwide public opinion.

There is another vital area where the South must stand united against a common enemy. That is in the field of national politics. This summer, both major political parties will hold their national conventions to write platforms and select candidates for President and Vice President.

And if present indications hold true, the conventions will degenerate into a contest in which each party tries to outdo the other in submitting the South to abuse, vilification, scorn, and contempt. Both parties will likely be eagerly seeking the title of champion South-haters.

This unhappy prediction can be forestalled only by forceful, determined, and courageous leadership in the South, acting boldly to preserve the self-respect of a proud and honorable people.

I have told my people repeatedly that, as far as national politics are concerned, I am a Mississippi Democrat—and the first word of that phrase means far more to me than the second.

When I go to the Democratic National Convention in Los Angeles this summer, I will conduct myself at all times as a Mississippi Democrat. I will remember at all times that as Governor of Mississippi, I am at that convention representing the people of our great State. And the racial integrity of our people is not for sale on the political auction block.

Where the principles of the people of Mississippi are involved, there can be no compromise. The people did not elect me Governor of Mississippi to bargain their heritage away in a smoke-filled room.

I did not become their Governor to preside over the liquidation of our precious freedoms.

And I know that the Governors of most other Southern States feel as I do in this regard. The only question in the minds of the dedicated leaders of the South is what course should be followed.

This decision must be made soon. It must be made while there is time for active consultation among our political leaders throughout the South. It must not be delayed until the last minute, when our opponents will use the age-old strategy of divide and conquer.

The South must go to the Democratic National Convention united—and the South must remain united, either in the convention or out.

Friends, I am the newest Southern Governor on the job. It would be presumptuous of me to call a meeting of other Southern Governors to plan our unified course of action. I'm certain such a meeting will be called by one of the senior Southern Governors. When it is called, I will be there, speaking up for the people of Mississippi. And if no one else calls the meeting, I will. You can count on that.

Out of this meeting must come a determined, fearless course of action. We must know that the South is committed, solidly and in advance, to a plan of action which will show our desire to remain within the ranks of the party of our fathers, while at the same time, demonstrating in no uncertain terms that we do not intend to acqui-

esce in the destruction of the ideals of our fathers by any party.

I've been thinking over some of our political problems. And if a southwide meeting were being held right now, here's what I'd say.

First, I'd say that the South must unite to use its influence to restore sanity to our national government. A united South could have a tremendous influence on the outcome of this fall's elections.

Next, I'd say that Mississippi and the other Southern States must make certain that our election laws are in order. We must make sure that the South will have real freedom of choice and action this fall. We must be absolutely certain that our people will have the opportunity to vote their real convictions.

Along these lines, I've already said back home that the Mississippi Democratic Party should hold a recessed State convention—a convention that will automatically meet back after the national convention to review whatever decisions are made in Los Angeles by the national party. Naturally, I hope other Southern States will do the same.

Only the other day, I was reading a plan suggested by one of our Mississippi Congressmen, BILL COLMER. He's the dean of our State's congressional delegation, and is also the chairman of the southern strategy group in Congress. Congressman COLMER urges the consideration of a plan to put independent electors on the ballot in every Southern State this November. He's not talking about a third-party movement—but he does want to be certain that southern voters will have an opportunity to vote their convictions on election day.

I believe this proposal has merit from two standpoints: First, if the Democrats and Republicans get into a close race up North, the 100 or so independent electors from the South—the Solid South—could be a real factor in determining the outcome of the presidential election. The South could hold the balance of power.

But even if this is not the case, the proposal is still sound on a moral basis. Friends, I am going to vote my convictions this November. The way I look at it, if we vote for integration, how can we expect anything else?

One of the parties is virtually certain to nominate a presidential candidate who's a card-carrying member of the NAACP. The way things look now, both parties might do this.

Can you vote for an NAACP member for President?

Ross Barnett certainly cannot. In my humble opinion, if we are so foolish as to vote for our own destruction, we will deserve whatever we get as a consequence.

Now if both parties do nominate NAACP members for President, what can we in the South do?

Well, friends, we certainly can't vote for either of them. We've got to be sure we've got someplace to go on election day—and there sure wouldn't be enough fishing holes to go around. I intend to see that the people of Mississippi do have someplace to go—someplace on the ballot where they can cast their votes without apology, and without sacrificing our cherished American principles and southern heritage. As a loyal southerner, I can do no less.

Let there be no misunderstanding—I am not here tonight to advocate a third-party movement. I am simply urging the South not to commit ourselves in advance to whatever Earl Warren or Walter Reuther may decide. We will have ample time to decide on a specific course of action. In the meantime, we must become united—we must pledge ourselves to stick together, to put the South in the strongest possible bargaining position. If there is to be an independent elector plan, it must be a southwide plan. There is no place in the Solid South for splinter movements—we must be united in whatever we do.

Only a prophet could tell at this early date what the outcome of the 1960 election will be. I will not even venture a guess. But I do know this: When the election is over, Ross Barnett will not have to apologize. I will be able to look the people of Mississippi in the eye and say, "I have kept the faith."

By now, many of you may be wondering, "What can I, as a private citizen, do?"

Friends, your presence here tonight indicates to me that you are already doing one of the most important things any private citizen can do to help win this mortal struggle. You are supporting the Citizens' Council movement.

The Citizens' Councils and their affiliates in other southern States, some of which have different names, are the only private agencies which have risen to meet the challenge of our times.

The Citizens' Councils—which were born in Mississippi—have now organized in thousands of communities throughout the South. They have sent a steady flow of literature into northern and western States. The Councils have provided the only organized opposition to the hundred-and-one left-wing groups dedicated to forcibly mixing the races—and the Councils have emerged victorious.

The Citizens' Councils have published a monthly newspaper for the past 5 years. This paper goes into every State in the Union and to many foreign countries. It finds its way into countless libraries, high schools, and colleges throughout the Nation, carrying its message of truth behind the paper curtain of the North.

Leaders of the Citizens' Council movement have appeared on speakers' platforms in the North and West dozens of times. They have given our friends in these areas renewed inspiration.

But perhaps the most dramatic success story of the Citizens' Council movement is in the field of television and radio. Every week, "Citizens' Council Forum" is seen and heard from the Atlantic to the Pacific, and from the Great Lakes to the Gulf. Every week, millions of Americans everywhere watch and listen as outstanding Senators and Congressmen talk about fundamental American principles.

More than 300 television and radio stations in 43 States have scheduled these "Citizens' Council Forum" programs. Thousands of letters from interested citizens have been received in Jackson. Truly, the response has been nothing short of amazing.

Also, there's another fact that might occasionally be overlooked. "Citizens' Council Forum" has played an important part in maintaining conservative solidarity in Congress. As of tonight, one out of every six of this Nation's Senators and Congressmen has appeared on at least one "Citizens' Council Forum" program. And that list is growing steadily. This is not without its effect on the Washington scene.

"Citizens' Council Forum" has accomplished all this in just two short years. It has been done entirely as a public-service project, supported by voluntary contributions from interested citizens—mostly from people back home in Mississippi.

I hope you see fit to do as I have done—to support the work of "Citizens' Council Forum" through a monthly pledge.

Friends, I am proud that I have been a Citizens' Council member since the Council's early days. I hope that every single white southerner will join with me in becoming a member of this fine organization. The Citizens' Councils are fighting your fight—they deserve your support. That is one thing each of you, as individuals, can and should be doing.

As far as I'm concerned, the day of the artful dodger in southern politics is ended. The time of the apologist is gone. Ross Barnett is a Mississippi segregationist and proud of it. And I will do everything within my power to preserve our sacred heritage, and to unite the South behind a bold and determined program to make the voice of the South heard throughout the Nation.

My friends, the solid South will again become a force to be reckoned with.

Thank you, good night, and God bless you.

Experts Doubt Russia's Missile Pinpointed Target

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Union, January 22, 1960:

SPACE AGE REPORT—EXPERTS DOUBT RUSSIA'S MISSILE PINPOINTED TARGET

(By Rembert James)

U.S. experts are no longer inclined to downgrade Russian rocketry, but they are suspicious of Moscow's claims that the first Russian rocket fired into the Central Pacific landed within 1.24 miles of its target. It may have done so, but based on American experience, it is not possible for the Russians to be sure. The Russians did not have enough measuring equipment in the area to make such a claim entirely believable.

American rockets fired into the Atlantic from Cape Canaveral commonly travel down a pathway of tracking stations. If they are long-range Atlas missiles, they commonly land now in what is called a splash net off Ascension Island in the South Atlantic, more than 5,000 miles from Canaveral.

A splash net is actually a circle of hydrophones on the ocean floor, at accurately measured positions. When a missile splashes, these hydrophones record the time that it takes the sound to reach them.

By triangulating the results from three hydrophones, it is possible to get a reasonably reliable fix on the actual location where the missile landed.

Although this is the most accurate way of measuring, it is not without error. Differences in the temperature of the water make differences in the speed with which the sound travels.

WAYS TO MEASURE

There are other ways of measuring. The missile, for example, may carry a small depth charge which explodes after the missile lands and sinks to a certain depth in the water. In this case, listening stations at three locations compare figures and arrive at an estimate of the point of impact.

Radar observation, from ship or shore stations, also is used to determine the location of impact. In long-range Atlas tests in the Atlantic, the radar on Ascension Island and ships' radars join in triangulating the missile's path and landing point.

If the missile is in powered flight, its position can be observed electronically until engine burnout time.

ESTIMATES DIFFER

Even if all of these systems are used, there still can be differences of several miles in estimates of where the missile actually landed.

U.S. informants say the Russians had no hydrophones on the Pacific Ocean bottom. Lacking a splash net, it seems apparent that the measurements came from radar tracking of the missile before it hit.

With three ships on station, as was the case, the Russians would have been able to triangulate the course, but U.S. experts doubt they could have pinpointed the impact area within 1.24 of a mile.

Michigan Is No. 1 Bean Producing State Again

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. CEDERBERG. Mr. Speaker, while such records are not at all new to Michigan, I am proud to report that our State has again shown itself to be the Nation's No. 1 bean producing State, based on the latest statistics for the 1959 crop.

Furthermore, these figures show that Michigan produces 97 percent of the Nation's navy beans, 81 percent of the yelloweye beans and 77 percent of the cranberry beans.

Not only does Michigan produce the greatest volume of beans but our beans are of the highest quality—as my colleagues well know from partaking of the bean soup made of Michigan beans and served daily in the House restaurants.

Referring to Michigan as the top-ranking bean State I would like to quote from the latest issue of Modern Farming. It follows:

Michigan, with a dry bean crop of 5,974,000 bags (100 pounds each), cleaned basis, again ranked first in total dry bean production among the States. California, with 3,720,000 bags, was second, followed by Idaho, 2,590,000 bags; Colorado, 1,600,000 bags; Nebraska, 1,190,000 bags; Wyoming, 1,036,000 bags; Washington, 940,000 bags; and New York, 837,000 bags. About 325,000 bags were produced in other States, making the total U.S. production 18,212,000 bags.

Michigan produced nearly one-third of the Nation's total crop of beans and accounted for 97 percent of the navy (pea) beans, 81 percent of the yelloweye beans, and 77 percent of the cranberry beans.

The final crop report issued by the Michigan Crop Reporting Service, from which this data is taken, reduced the crop estimate from over 6 million bags predicted earlier to just under the 6 million mark. The final estimate, however, still indicates a record crop was harvested—472,000 bags above the previous record crop of 5,502,000 bags in 1949, and 748,000 bags above last year's big crop.

The bean producers of Michigan, many of whom live in the 10th Congressional District which I represent, are rapidly becoming highly specialized producers. Improved bean varieties have been developed and there have been many advances in controlling bean diseases. Another boon to the farmer-producer is the new techniques developed by the elevator and grain processing industry in handling his crop more expeditiously.

In connection with my reference to Michigan as the No. 1 bean State I would also like to mention tribute recently paid to one of our Michigan citizens who has devoted a half century of his life to the bean industry and 44 years of that time with one company. I refer to Mr. A. L. Riedel, divisional president and general manager of the Michigan Bean Co., division of the Wickes Corp. At appropriate ceremonies Mr. Riedel was recently presented with a gold watch engraved with the Jack Rabbit emblem which he has made famous the world around in the promotion of Michigan beans moving into channels of trade under that name.

A Tax That Should End

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. KOWALSKI. Mr. Speaker, the President's recommendation that the telephone tax be continued for another year is the subject of an excellent editorial in the January 26 issue of the Bridgeport Post, a newspaper of wide readership in Connecticut.

The editorial follows:

A TAX THAT SHOULD END

In wartime, or at a time of immediate preparation for war, the public expects to pay additional taxes. It does so willingly and will do so again if it appears that we are going to be involved in military conflict.

A wartime tax was imposed on railway fares to keep people off the trains that were so urgently needed to transport servicemen. A tax was imposed on telephone calls to limit the use of the telephone. But both taxes were levied in order to produce greater revenues to pay for military needs.

In the years since the war ended these levies have been extended by each Congress beyond the date of expiration despite public protest. The Government collects 10 percent on phone calls and the tax, once again, is due to expire next June 30. President Eisenhower has asked Congress to keep it on the books another year.

There has been some, but not enough, indication that Congress will allow the tax to vanish on its due date. To drop it would not only help the public, weary of high taxes, but it would be a good political move in the big election year.

Governor Rockefeller, of New York, wants the tax turned over to the States, his particularly, as he hopes to raise from $70 to $80 million by a levy on phone calls. He needs the money, he says, for education. If he can do it, every Governor in the Nation will undoubtedly follow suit.

When the tax expires, it should be allowed to pass away peacefully, not to be revived again. The telephone is a necessity, not in any way a luxury, even for those inconsiderate people who hog the wires on party lines.

Congress must know that the American people want this tax to go. Elimination will set a precedent, and once Congress gets the feel of removing an unfair charge on a business and household necessity, the lawmakers may continue the practice. The tax should be killed so dead that no State can take it over, for any purpose whatsoever.

The Pellets of Death

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article from the January 1960 issue of the Michigan Audubon Newsletter telling of the disasterous effect of spraying parts of Detroit, Dearborn, and the city of Monroe with aldrin, a powerful pesticide.

The spraying, according to the newsletter, decimated wildlife in the area and was extremely destructive even to domestic pets.

The article follows:

THE PELLETS OF DEATH

During the second week in November 1959, parts of Detroit, Dearborn, and the city of Monroe were subjected to a blitz by 2 planes flying at about 300 feet. The enemy, allegedly, was the Japanese beetle, but it is highly questionable that any considerable portion of the area poisoned was actually infested. Invoking a State statute which permits the Department of Agriculture to invade private property despite the objections of the owners, "if the public good is at stake," a spray program was inaugurated to cover about 26,000 acres with pellets containing 2 pounds of aldrin per acre.

At the invitation of the Detroit Audubon Society, the biologist from National Audubon, Harold Peters, came to Detroit, and upon investigation revealed that the Detroit City Council was persuaded to allocate $12,500 for a Japanese beetle control program. Bids were obtained from private pest-control firms, and the one proposing aldrin was chosen, presumably because aldrin was the cheapest. Unfortunately, aldrin is rated about 100 times more toxic to wildlife than DDT, and is is also higher in dermal and oral toxicity of any warmblooded animals. According to Mr. Peters, Detroit's health officer, who might have done a little investigating for himself beforehand, was erroneously persuaded that this program would not harm humans or other warmblooded creatures. And so the rain of death began.

In the spaces between shingles on roofs, in eaves troughs, in the cracks in bark and twigs, the little white pellets of aldrin and clay, no bigger than a pinhead, were lodged by the millions. Children on the way to and from school were peppered with the pellets, too, although aldrin is toxic to the skin. When the snow and rain came, every puddle became a possible death potion. The Detroit Audubon Society, by week's end, began to get many phone calls about dead and dying birds, in northwest Detroit and Dearborn. The birds were mostly English sparrows and starlings, it is true, for they are the most common city birds, but there were also bluejays, cardinals, and at least one nuthatch turned in to your editor, personally. It is worthy of note that starlings are especially fond of Japanese beetle grubs.

Several individuals called to report personal symptoms, similar to a severe cold, including chest pains, nasal discharge, and a feeling of lassitude. In one case there was even blood in the sputum. These unpleasant symptoms continued for a day or so; one woman, affected on Saturday but better by evening, had a violent recurrence of the illness when she and her husband

raked up leaves in their yard on Sunday, and both had to give the job up. A man on the border of Detroit and Dearborn called to say that his whole neighborhood was stirred up by the number of dead birds found, and that there was what he called a smell of carrion in the air itself.

Dead squirrels were reported. Local veterinarians noticed a sudden increase in ailments among pets * * * especially cats, which groom their fur and paws with their tongues so often, and also eat birds. In these animals the symptoms were diarrhea, vomiting, even convulsions. There was "standing room only" at her veterinarian's, according to one phone caller. The symptoms eventually abated, it is true, but the poison is still in the ground, still in the puddles, will still stick to the animals' feet, and is cumulative in the system.

During the fire ant eradication program in the South, the inhabitants of areas about to be treated were warned in advance to lock up livestock and poultry; not to hang out the wash; to cover all water supplies; not to eat anything touched by the chemicals; to keep pets and children indoors and to prohibit their playing in puddles of water. No such warnings were issued here; alarmed residents were assured that the spray was harmful only to beetles.

So the death toll continues. There is no way to prove that the vanished flocks of English sparrows and starlings are all dead, nor that the pellets of death have made many feeding stations completely tenantless. In the thick windrows of November's fallen leaves many small, feathered bodies could fall, unnoticed, and be burned in the autumn bonfires. Many people did find dead birds, it now develops, but merely threw them in the trash. Birds that were picked up in a dying condition all showed similar symptoms: fluttering, loss of flight, paralysis of the feet, convulsions, protesting cries, and finally death.

Ironically, the U.S. Department of Agriculture, in its own yearbook entitled "Insects" (1952, No. 413), has this to say:

"Lawns can be protected from injury by the (Japanese beetle) grubs for at least 6 years with one application of DDT, for at least 3 years with one application of chlordane, and indefinitely with one application of milky disease spore dust."

"About 25 different soil micro-organisms can cause some stage of Japanese beetles to become diseased. Among these are bacteria, fungi, protozoa, nematodes and viruses. The bacteria causing the milky disease of the Japanese beetle grubs were found to be the most important of the organisms. These are sporeforming bacteria.

"The milky disease of grubs of the Japanese beetle has caused a marked reduction in the abundance of the pest in the older infested areas. The disease is caused by germs which the grubs take in as they work their way through the soil and feed on plant roots. * * * Under favorable conditions the disease kills a high percentage of the grubs of Japanese beetles and some of the grubs of closely related insects. It has no effect on other insects, warm-blooded animals, earthworms, plants or human beings."

The catch is twofold: Spore dust made commercially is expensive, though the overall cost might be comparable if only infested areas were treated. Japanese beetle grubs are practically never found on roofs, under parking lots, or in paved roads. But the pellets of death fell everywhere, on parking lots and pavements, on children's sand boxes, on lawns and vegetable gardens. The poison-out pellets were slow to dissolve and remained visible for many days. The poison lasts several years in the ground. Who cares to prophesy what next spring's warm, wet days may offer to the returning migrants, and the preschool youngsters, turned loose in their own yards to nibble and taste as little children will?

The other reason is that it is quicker to use poisons which are potentially deadly to all living things as well as the grubs of Japanese beetles. And yet, although Japanese beetles have been recorded on about 275 different plants, they seem rarely to feed upon ornamental trees and shrubs, vegetables and grains, and the common trees such as ash, catalpa, dogwood, evergreens, locust, maple, oaks, redbud, sweetgum, and poplar.

It is too late to undo the damage in northwest Detroit, Dearborn, and Monroe. But each of you may be a committee of one to see that your local health officer and city council make no such blunders, and are given the accumulating evidence of what devastating effects pesticides may have when irresponsibly used. Irresponsibility is the cardinal crime in using these poisons on a widespread basis. No one wants to go back to the era when he found half a worm in the apple he was eating. The pesticide manufacturers cannot be blamed if their products are misused. But there has been far too little research on the effects of these deadly substances on the human population which inescapably ingests DDT and others of the chlorinated hydrocarbons and distillates known to be poisonous, from other things besides cranberries and lipsticks. Research has shown that the poisons are cumulative in human tissues, and all of us are taking in much more of them than we realize. A series of restraurant meals in a southern city, analyzed in a laboratory, re-revealed traces of DDT in every one of them.

Ironically, too, the Government to which we look for protection can condone and even assist in our undoing. The Outdoor News Bulletin of the Wildlife Management Institute, in its current issue November 20, 1959, paragraphs "Cranberry Clash Underscores Poisons' Problem," and says, among other things:

"News media reveal that the USDA is siding with the cranberry growers, a position that seemingly stems from financial, not health, considerations. If that is true, then the public should be thankful that there is another agency to protect its health."

That agency is the U.S. Food and Drug Administration, which is cracking down at last on the use of poisons on plants grown for food and on cattle fodder that may affect milk and beef. That very agency, the Food and Drug Administration, was in part the outgrowth of a public demand for protection. Public opinion, spearheaded by the National Audubon Society, restored the egrets to their marshlands. Nationwide public opinion helped to save our own Porcupine Mountains from the despoilers. An aroused public opinion is an almost irresistible force—and that means you and you and you.

Too Much, but Never Enough

EXTENSION OF REMARKS

OF

HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. HOLT. Mr. Speaker, I would like to call to the attention of my colleagues the very interesting article from the January 10, 1960, American Weekly on fundamental honesty and Americanism. This is what made America great. Let us all work to keep America strong morally, spiritually, and economically.

The article is as follows:

TOO MUCH, BUT NEVER ENOUGH

(By Representative STEVEN B. DEROUNIAN, Second Congressional District, New York)

During school vacations I always worked for my father, who was an importer and distributor of food specialties. Once I overweighed a cheese shipment by 10 pounds and the customer naturally sent in a complaint. The vehemence of my father's reproof astonished me.

"But, Pop," I protested, "it was just a mistake. I'm sorry."

"You made a mistake and you're sorry," my father stormed. "That's what every dishonesty person says when he's caught. Sure, I know you didn't mean to do the wrong thing, but who else knows it? A reputation for honesty is one thing money can't buy. It can be preserved only by not making mistakes, not by making apologies. You remember that, boy, as long as you live."

I remembered. I guess I was still remembering when I sat with the eight other members of the legislative committee investigating TV quizzes and listened to Charles Van Doren. He had made a mistake. He was sorry. He measured the gravity of his error with such candor and he expressed his contrition in such an agony of self-abasement that some of the committee members were understandably moved. I wasn't.

When it came my turn to express my sentiments, I said: "I am glad to have heard your story today but I disagree with my colleagues because I don't think that an adult of your intelligence should be commended for telling the truth."

This wasn't a courtroom hearing we were conducting. There were no charges against Van Doren, who permitted himself to be seduced by cajolery and greed, nor against the fixers who rigged the quiz shows nor against the television industry which blithely allowed it all to happen. But as the shocking stories poured out day after day and were accepted with such complacency by the public, it seemed to me that a trial actually was being held and in the docket stood the American people.

The judge and jury, in this fantasy of mine, was my father, Boghos Derounian. Although he was the most honest man I ever knew, he might have been a little prejudiced toward the defendant public because he was so completely sold on the mass conscience of Americans. The whole get-rich-quick hoopla of the quiz shows, the payola and the rest of it, the ease with which a man could pick up $129,000 and a $50,000-a-year job would have worried my father. He didn't think it was good for anyone to acquire things too easily.

We lived in Mineola, Long Island, and my father's business was in New York City. For years he brought home almost all our food because he felt he could get better quality at a lower price. But no solicitor for church, charity or civic improvement ever left our house without a substantial donation.

"I've learned a lot about good and evil. They are not always what they appear to be," was the way Van Doren began his confession. My father never had any difficulty in distinguishing good and evil, and he saw plenty of both. He and mother were Armenians driven from one country to another by the Balkan wars and religious persecution as Christians. Each time they moved they could take only what they could carry with them. Father would convert his holdings into gold, which mother always put into a

cloth bag fastened with 10 safety pins inside the bodice of her dress.

By the time I was born in 1918 the family had settled in Sofia, Bulgaria, where father had become a wholesale candy merchant thinking only of one day living in America. Mother's brother was already there. Uncle Antranig found a house for us in Mineola and we came over and moved into it on April 2, 1921, my parents, my oldest brother, Avedis, 9, Hagop (whom we later called John) and I.

Mother could speak a little English but father spoke none, although he was fluent in Armenian, Greek, French, Turkish and Bulgarian. He had brought along some oriental rugs as currency and he sold them off one by one the first 2 years to pay our expenses. Then, having learned English by reading the newspapers, he founded his food importing business.

It didn't take father long to learn that there were plenty of chiselers around, but most of them, he felt, didn't represent America. He became a citizen as soon as it was legally possible and celebrated the occasion by inviting 50 guests to a dinner that took a week to prepare and 4 hours to eat. Afterward he made a little speech. "I am proud to be an American," he said, "and happy that my sons will be brought up far away from hate and prejudice, in a land where honesty and decency rank over distrust and greed."

He sent us boys through New York University and was delighted when I went on to get a law degree and, after the war, set up a law practice in Mineola. He became a Hoover Republican, followed politics carefully through the papers, was usually the first to vote in his precinct and was certainly one of my stanchest supporters when I was elected to Congress in 1953.

On one occasion he borrowed $10,000 for 60 days. When the period was up he paid the bank half the principal and was given a 60-day renewal on the balance. He paid that off in 30 days and then the bank started to look for his note to cancel it. The officers discovered to their horror that no one had asked him to sign a note. It hadn't made the slightest difference to father.

Father loved to entertain. He was happiest when the house was filled with guests and food was being served. "Ger dzo. Ger" (Eat more—eat) he would insist, helping himself at the same time. He did not, however, enjoy being entertained elsewhere. The Johnsons were close neighbors during the 34 years that father lived in the Mineola house. They were most hospitable and he was on excellent terms with them, but the only time he went to their home was to listen to Herbert Hoover's acceptance speech on the radio in 1928.

Until he was past 83, he continued to commute 2 hours a day, by bus and subway, to and from his business. One spring afternoon in 1955, after a game of solitaire in which he had turned up the ace of spades—the "death card"—he took off his marriage ring, took out his wallet and his gold watch, and placed them on the table. He cautioned mother to pay the tax bill and the telephone bill, which had just arrived, and then lay down for a nap from which he didn't awaken.

Television meant nothing to father but the TV scandals would have shocked him, perhaps as much as some of the rest of us would be shocked if we learned that the Rose Bowl game was fixed—although that is only entertainment, too.

He never saw a quiz show, but if the duplicity of Van Doren and the others could have been explained to him, his unwavering faith in the moral integrity of America would have been rudely shaken when he was told that an amazing number of people refused to condemn them.

He might even have begun to lump a lot of Americans into that group about whom he used to say, when they were willing to go to any lengths for a fast buck: "They have too much, but never enough."

Amendment to the Social Security Act

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. ASHLEY. Mr. Speaker, I have today introduced a bill which would amend the Social Security Act to provide that a child entitled to child's insurance benefits shall not lose the right to such benefits by reason of adoption should the adoptive parent be the child's brother or sister.

As the law reads now, Mr. Speaker, only in cases where the adoptive parents are stepparents, grandparents, aunt or uncle can a child continue to be eligible for the benefits due her as the survivor of a deceased insured individual.

Practically speaking, I doubt that this is a situation which would arise very frequently. But during the recent adjournment when I was in my district this exact situation was brought to my attention and to show just how the law presently operates to deprive a child of his or her entitlement to survivor's insurance benefits, I should like to quote from a letter which I received recently from a constituent:

My father died May 18, 1952 and my mother passed away on August 20 of this year (1959) as a result of lung cancer. I have an 11-year-old sister who since my mother's death has been making her home with my husband and me. We have no children of our own and since my sister has requested our last name, we of course immediately started adoption proceedings.

Since I paid my mother's burial expenses, I am, as you know, entitled to the social security death benefit. At the time application was made for this benefit, the claims examiner of the social security district office informed me that my sister would be entitled to monthly benefits as a survivor of my mother. My mother paid into social security from the time of its inception in 1935 to December 1948.

Upon investigation, it was found that if my husband and I adopt my young sister she will not be eligible for monthly benefits because the law as it stands now provides that when the child of a deceased insured person is adopted, his payments end unless the adopting person is the child's stepparent, grandparent, aunt or uncle. Since I am a sister, she is not entitled to our mother's benefits. Incidentally, her aunts and uncles are in their late fifties, her grandfathers are deceased, her paternal grandmother is 76 and bedridden.

The writer of this letter goes on to point out, Mr. Speaker, that in this particular case circumstances are such that the prospective adoptive parents—sister and brother-in-law—are in a position to go ahead with the adoption of their younger sister despite the automatic cutoff in benefits to which she would otherwise be entitled until she became 18.

However, it is easily conceivable that there might be some cases where, because of sickness, death, or other hardship, money would be an important—or even the determining—factor in caring for a child whose parents are deceased and who wishes to be adopted by her closest living relative.

If this minor revision of the social security laws could serve to enable an orphan the happiness, comfort, and, more importantly, the security which comes with having one's own family, then, this in itself, Mr. Speaker, is sufficient argument to merit favorable consideration of my proposed amendment.

NBC–TV Program "Today" Offers Half-hour Weekly for Science Course Conducted by Dr. Edward Teller

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. McDOWELL. Mr. Speaker, enthusiastic congratulations are in order for Dave Garroway, nationally known television star, because of his firm offer to Dr. Edward Teller to conduct a physics-appreciation course on a weekly basis on the NBC–TV program "Today."

I have been deeply concerned with the necessity to better inform the American people through the media of television, and so I found Dave Garroway's offer particularly encouraging.

Such an educational program conducted by Dr. Teller, a recognized authority in the field of nuclear physics, could and would awaken millions of American citizens from the present state of disastrous apathy in this nuclear age.

An awakened populace would, of course, demand an end to the present Pollyannish, soothing-sirup attitude which was greatly encouraged by the 80 simultaneous dinners in 43 States and the District of Columbia which launched the 1960 GOP campaign with a partisan roar. An aroused citizenry, deeply aware of the issues, is a prime requisite if the missile gap is to be closed, and if the United States is to be enabled to overtake the Soviet Union.

I include the text of a telegram I sent to Dave Garroway, and I invite my colleagues to join with me in urging Mr. Garroway and the National Broadcasting Co. to arrange this significant program.

JANUARY 28, 1960.

MR. DAVE GARROWAY,
Today Program,
National Broadcasting Co.,
New York, N.Y.:

My enthusiastic congratulations in support of your firm offer to make available one-half hour of your program "Today" to enable Dr. Edward Teller to conduct a physics-appreciation course. As a Member of Congress who is deeply concerned with the necessity to better inform the American people through the media of television, I find

your leadership most heartening. Such an educational program conducted by Dr. Teller, a recognized authority in the field of nuclear physics, could awaken millions of American citizens from the present state of disastrous apathy in this nuclear age. I am suggesting that my colleagues in the Congress join me in expressions of support for this dynamic display of leadership on your part.

HARRIS B. MCDOWELL, Jr.,
Congressman at Large, Delaware.

Retirement of a Fine Army Officer

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a letter of commendation to Col. Clifford A. Poutre, who recently retired as commanding officer of the Tobyhanna (Pa.) Signal Depot, from Maj. Gen. Earle F. Cook, Acting Chief Signal Officer, Headquarters, Department of the Army. This impressive commendation was occasioned by the retirement of Colonel Poutre after 30 years of distinguished service in many responsible positions in the U.S. Army. As a member of Congress, I had occasion in many instances to work closely with Colonel Poutre on matters concerning my constituency and I, without exception, received the finest cooperation from him in resolving these problems. I would like to take this means and opportunity to wish Colonel Poutre a happy and well earned retirement.

The letter follows:

HEADQUARTERS,
DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF SIGNAL OFFICER,
Washington, D.C., December 23, 1959.

Col. CLIFFORD A. POUTRE,
Tobyhanna Signal Depot,
Tobyhanna, Pa.

DEAR COLONEL POUTRE: The occasion of your retirement brings with it an opportunity for me to express my deep appreciation for the outstanding contributions you have made to the Army Signal Corps during your more than 30 years of active service.

You enlisted in the Regular Army in 1929 and served for more than 12 years as a noncommissioned officer. During those years you became an expert in developing and perfecting scientific methods of breeding and training homing pigeons. In 1941 you were commissioned in the Officers Reserve Corps; and your specialty was fully utilized in your initial assignment as Pigeon Breeding and Training Officer at Fort Monmouth. As a result of your competence in this specialized field, you were selected to establish and command the Pigeon Breeding and Training Center at Camp Crowder. After graduating from the Command and General Staff School you returned to Camp Crowder and served in various capacities in the Training Division of the Army Service Forces Training Center. In May 1945 you began the Advanced Officers Course at the Eastern Signal Corps Schools, Fort Monmouth, but were ordered to an overseas assignment before you could complete the course. You served with Headquarters, U.S. Army Service Command C; the Signal Section of the Eighth Army; the 504th Headquarters and Headquarters Detachment, Signal Service Battalion, Eighth Army; and the Yokohama Signal Depot. You had amply demonstrated your proficiency in the training of troops, your ability to handle subordinates; and your capability of succeeding in any position, regardless of obstacles or pressures. All these commendable attributes led to your selection for appointment in the Regular Army.

On your return to the United States, you were assigned as an Instructor at the Signal School, and during your tour there, you served as the Fort Monmouth representative at LOGEX-50. The excellent showing of the Signal Corps during that exercise was largely due to your efforts. In August 1950 you reported to the Industrial College of the Armed Forces to pursue the Economic Mobilization Course, and when you had successfully completed the course, you were assigned as Chief, Office of Electronic Programs, Munitions Board, Office of the Secretary of Defense. It was as if you were beginning an entirely new career. Having proved your capabilities as a leader, an instructor of men, you now began to establish your reputation as an expert in the field of electronics industrial mobilization planning. The outstanding manner in which you met the challenge of this key position led to your subsequent assignments as Deputy for Industrial Mobilization and Deputy Commanding Officer, U.S. Army Signal Supply Agency. You coped successfully with the problems of providing industrial ability to meet emergency procurement programs and integrating current procurement with industrial mobilization planning. You were one of the first to realize the tremendous impact that Electronic Data Processing could have on the Army's procurement, storage, and supply operations; and accepted responsibility for guiding installation of the necessary equipment and programing the system. As a result of your efforts, our supply agency now has one of the most comprehensive and effective systems in operation anywhere within the United States. Your terminal assignment was as commanding officer of the Tobyhanna Signal Depot, and there you guided the operations of the depot to a peak of efficiency never before experienced.

Your many achievements have added in no small measure to the splendid reputation enjoyed by the Army Signal Corps, and I am pleased to have had you as a member of my senior staff. You take with you my best wishes as well as those of the entire Corps. May you find in your retirement the many years of health, happiness, and continuing success you so richly deserve.

Sincerely,

EARLE F. COOK,
Major General, U.S. Army,
Acting Chief Signal Officer.

Hon. Richard M. Simpson

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. WILSON. Mr. Speaker, we in America have lost a real champion in the passing of Dick Simpson, our illustrious colleague from Pennsylvania. Dick Simpson epitomized integrity, forthrightness, and responsibility in Government by his every action. His sincerity has always been an inspiration to me.

Through the years that I have known Dick Simpson, he always had a moment in his busy schedule to counsel and assist each one of us so that we could better perform our responsibilities as representatives of the people. It is rare to find a man of his character and understanding.

I join with all my colleagues in expressing my deepest sympathy to Mrs. Simpson and his family.

Forgotten Soldiers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter about the veterans of World War I sent to me by Frank J. Shurtz, past commander, Muskingum County Barracks No. 454 of Zanesville, Ohio.

The letter follows:

VETERANS OF WORLD WAR I,
OF THE U.S.A., INC.,
Zanesville, Ohio, January 27, 1960.

DEAR CONGRESSMAN LANE: I remember—yes, I remember well—42 years ago in 1917 when President Wilson declared war on Germany; the call to arms when so many enlisted; the selling of war bonds; the speeches; the songs—"Over There, and we won't come back till it's over, over there."

The camps; the ships that carried us over there; the sleeping quarters where baggage was formerly carried; the subs that sank many ships; and the landing on French soil. Yes, we had come for a purpose—a just cause—so that freedom would not perish from this earth.

Yes, I remember the battles in the early part—Belleau Woods, Chateau Thierre, Meuse-Argonne, and many others; how we fought with airplanes (called crates) and the French 75 guns; how we lived and slept in the trenches for $30 a month (many never returned but sleep eternally in Flanders Field); the signing of the armistice on November 11, 1918, in a railroad car in France, so that this war would end all wars; also Armistice Day, 1918, and the singing and rejoicing that the war had ended in victory and glory for us and our allies.

So now all we ask is that the remaining forgotten soldiers be given an adequate pension, with no penalties attached because of a little savings or income which he or his wife may have.

Pensions given to all ex-Presidents and ex-President's wives (also Congressmen and generals) have no penalties attached because of their earnings or their wife's earnings or because of their incomes. We ask only for the same consideration for the soldiers of 1917 which is now given to the Spanish War veterans.

Yes, all of us remember last Armistice Day, November 11, 1959, when taps were blown and the guns facing the east were fired in memory of those who have answered their last roll call. As one speaker said, "They should be remembered this day and every day for the sacrifices they made so that we might have peace and liberty once more." Permit us to remind you of the World War I

veterans who rememebred to join the U.S. forces in 1917 and who did not forget to salute our flag in 1959. We now ask that you not forget the veterans of 1917.

We now respectfully ask that you, as a member of this Congress of the United States, amend pension bill No. 7650 of 1959, or pass bill H.R. 9336 without income penalties attached and that this be done this year.

An early reply to this letter will be greatly appreciated.

Sincerely yours,

MUSKINGUM COUNTY BARRACKS No. 454,
FRANK J. SHURTZ,
Past Commander, Zanesville, Ohio.

Mark Clark States Citadel's Code of Ethics

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith a statement by Gen. Mark Clark made in response to a request from This Week magazine of January 31, 1960. Gen. Mark Clark, the distinguished president of America's most distinguished military college, gave the code by which his cadets live. General Clark is a classic example of this peerless and priceless rule by which the young men under his supervision spend their time at the military college of South Carolina.

I wish every American could see this magnificent institution, could witness its morale, could see the happiness in the young men who attend this fine military college, and could see the products who leave The Citadel at the end of their college careers. The Citadel excels in military, it excels in athletics, it excels in education, and best of all it excels in making young men—from every part of America—better Americans.

The statement by General Clark follows:

[From This Week magazine, Jan. 31, 1960]

HONOR

(By Gen. Mark W. Clark)

I have always believed that everyone needs to impose upon himself some rigid code of personal ethics. The Ten Commandments are probably the most perfect example of such a code.

But it seems to me that young people, who perhaps need rules of conduct the most, tend to shy away from long or complex lists of "do's" and "don'ts." That is why we at The Citadel have established our Honor Code which consists of just one rule expressed in nine words: "A Cadet does not lie, or cheat, or steal."

Just nine words. But what important words they are, for without them none can hope to build a decent or a happy life.

Of course, The Citadel's Honor Code is only a beginning. Of course, our 2,000 cadets know that there is more to character than merely not lying, cheating, or stealing. But these negatives are important as a starting point. A man can then go on from these "don'ts" to more positive rules of life. If, as a boy, he learns what not to do, then as he matures the positive values will slowly move into place. "Do unto others * * *," "Love thy neighbor"—these "do's" are the true capstones of a moral code. But the "don'ts," learned in childhood, are its foundation.

Address by Charles H. Silver, President, Board of Education of New York City

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I wish to insert an address made by the Honorable Charles H. Silver, president of the board of education of the city of New York, at the ceremonies held in connection with the setting of the cornerstone of Public School No. 134, Manhattan:

ADDRESS BY CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT THE SETTING OF THE CORNERSTONE AT THE NEW PUBLIC SCHOOL 134, MANHATTAN

As we gather here today, we can take pride that, on this ground, will rise a structure to honor a great lady whose life and deeds have ennobled the name of all womanhood.

It is quite appropriate that we pay tribute to the memory of Henrietta Szold and that our tribute take the form of a magnificent new school.

I am filled with a warm sense of "belonging" whenever my duties take me to this exciting and colorful section of our city. I remember the cramped and ill kept classrooms where boys and girls who had come here from every corner of the world sat and listened wide eyed to the wonderful story of America. I still can hear a chorus of voices in assembly singing "My country 'tis of thee, sweet land of liberty * * *"—and the teacher telling us the meaning of that magic word, "liberty." I learned, then, how rich a gift was becoming mine just by being an American.

What a little boy learns he never forgets. And I have never forgotten the East Side where I learned the precious fact that there is no more important title in the world than that of "American citizen." Thousands of boys and girls who study within the walls that will form around this cornerstone will learn how true that is.

Henrietta Szold was a great American. She was born in Baltimore in 1860 and in founding the world's largest Zionist group, Hadassah, the Women's Zionist Organization of America, she became in herself a living bridge between this citadel of democracy and the ancient homeland of her people.

How can I picture to you what she was and what this school is destined to become because it bears her name. As a child she studied German, Hebrew and French with her father, Rabbi Benjamin Szold, learning from him not only a wisdom and culture born of the ages but a humane attitude toward life, an abiding love of people and a burning desire to serve youth.

One of her earliest memories was that of being held up high above his shoulders by father to look at a procession of people walking in the street behind a casket. "That, my child," he told her, "is the coffin of Abraham Lincoln who hated slavery and loved freedom." She, too, hated the yoke that man imposes on his fellows. For her, freedom was the birthright of mankind and she fought for it throughout her days.

To her, the prophet's query was very real and intensely personal: "And what does the Lord require of thee?" The answer to that question seemed to lay upon her life a constant command which she never failed to obey: "To do justly, to love mercy and to walk humbly with thy God." For her the Commandmants became the only way of life and the Torah was a light to those who walk the roads of the world in darkness.

She reached out along those roads and into that darkness and under the comforting mantle of Hadassah she brought thousands to shelter, to safety, to renewed hope and to health. In her name and by her example, Hadassah over the years has spread a network of health institutions throughout the Holy Land serving Christian, Moslem and Jew, alike. Hadassah has waged successful war against man's oldest enemies—ignorance, poverty and diease. It has raised the standards of medicine, introduced modern methods of treatment, advanced health education among the neglected masses of the Middle East, it has trained graduate doctors and nurses, improving the living conditions and extending the lives of the people to such an extent that Israel today, thanks mainly to Hadassah, is not only a leader in the field of public health, but has set high standards in this area.

Toward the end of a life of unfaltering service and self-sacrifice, in 1934 at the age of 75, Henrietta Szold became the director of the movement which sought to rescue thousands upon thousands of children from a life of hopeless persecution decreed for them by the Nazi regime. She consecrated herself to the project of bringing these children out of Germany to Palestine. In her woman's heart, she saw these small anxious faces, pathetic creatures, practicing the refugees' age-old ritual of patience—of waiting—of endless waiting. And she could not sleep because of the constant question that echoed in her brain—for what are they waiting? There on the clogged roads, huddled, hungry in the damp and filthy camps: For whom are they waiting, those sad, silent masses of wandering humanity? And she knew that they were waiting for her, for a woman who had lived and worked for children during more than a quarter of a century of dedication to humanity.

She spoke in the voice of warmth and friendship, of love and faith and goodness in the midst of a world gone mad. She spoke in the voice of "Hadassah, caring for her people." She spoke in the still, small voice of a single woman, a voice that is echoed today by the more than 300,000 women who are members of Hadassah. She said, of the haunted and tormented, of the wanderer, the oppressed, the homeless, frightened child—"They need not die. They need not fear. They shall find a home."

Today, the voice of Henrietta Szold, like her eternal torch of faith, is carried forward in the devotion of such women of Hadassah as: Dr. Miriam Freund, tireless president of this inspired organization, and Mrs. Nathan D. Perlman, national chairman of the Hadassah Medical Organization.

You know, it was Mrs. Perlman who originally suggested that we name this school for the founder of Hadassah—and those of you who are acquainted with Mrs. Perlman will realize that she suggested it, not once, but many times, for she is a woman of determination—for which we can indeed be thankful.

In setting this cornerstone we offer dramatic proof of the progress we are making in widening the frontiers of our municipal educational program. Henrietta Szold would have loved this school that is to be constructed here in her name. She would have taken her place beside all present-day champions of education to emphasize our aim in building bigger and better schools

so that no child in any area of our city may be deprived of the fullest possible educational opportunities.

And the memory of her devotion should inspire us to look to our responsibilities to the children in our city who are still housed in the 190 ancient and obsolete schoolbuildings that are more than 50 years old. And we need to look to those other 170,000 youngsters whose schools are so crowded that their schoolday must be shortened or half-day school sessions run end to end.

We must heed the warnings of our city fathers that the financial picture for the future makes it unlikely that we will be able to give these children their full due measure of educational opportunity. What a grim thought this is in the greatest city in the land of opportunity.

Fortunately, we have been provided with a way of insuring the continuance of our building program—a way to give all our children their proper educational setting.

Two State legislatures and two Governors, Governor Harriman and Governor Rockefeller, have passed and signed a measure to permit New York City to issue a limited amount of additional bonds for school construction only, if it needs to do so.

In November, you the people will have the chance to give our children this insurance for their educational future by voting for amendment No. 4 on the voting machine.

We must not break faith with those like Henrietta Szold who devoted her life to the task of securing such opportunity for America's children.

In closing, I could do no better than to quote these few words which were part of Henrietta Szold's acceptance speech broadcast from her home in Jerusalem in March 1944 when she received a degree of doctor of humanities from Boston University. She said, "I can only indulge the hope that I may have felt the influence of the law of kindness and truth which demands readiness to shoulder responsibility with forgetfulness of self."

In helping to set this cornerstone, I pray that this school may transmit to the young people who study here the law of kindness and truth and that you and I will be ready and worthy to shoulder our responsibilities, serving the God and the purpose and the sacred memory of Henrietta Szold.

Widening Gap?

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. KOWALSKI. Mr. Speaker, under unanimous consent I submit for the Appendix of the RECORD an editorial from the Waterbury Republican, one of Connecticut's leading newspapers.

The editorial points out that there is reason for serious concern over some of the statements that have been made about the missile lag.

The following is the editorial, from the January 27 issue of the Waterbury Republican:

WIDENING GAP?

We suppose nothing is simple in this space-missile age, least of all such calculations as measure the proficiency of our national defense. But it does seem to us that something more than what we are currently getting from Government leaders with respect to the state of our preparedness is deserved by the American people. Most Washington utterances on the subject sound like double talk.

The latest voice to be held in the Defense Department's defensive chorus is that of Air Force Secretary Dudley C. Sharp. He says that there is no overall deterrent gap.

What he apparently means by that is that while a ceratin gap may exist in the matter of missile development our Strategic Air Command force of long-range bombers would still make the Russkis think several times about pushing the famous button. Delivering atomic destruction personally, via manned airplanes, may have become somewhat horse-and-buggy but we are prepared to do it in a wholesale way to make retaliation really massive.

If there is a wide and maybe widening gap it is in the one particular of missile development though, for what comfort it may be worth, Mr. Sharp doubts that it is of the three-to-one order predicted a year ago by Defense Secretary McElroy.

It could, however, be a lot less than three-to-one and still be deemed a just subject for very deep concern. When is the gap going to narrow? Until it narrows aren't we losing a scientific and technological race which may be vital for our country? And if that is so, then why aren't we making more of an effort to reverse an intolerable trend?

Ignorance a Weapon

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the January 21 edition of the Lansing Journal, a community newspaper in my district, is, I believe, a most thought provoking commentary on the subject of the distribution of profits under our vital free enterprise system:

IGNORANCE A WEAPON

Economic ignorance can be about as dangerous a weapon as an atom bomb. It leads to beliefs, attitudes and demands that could ultimately eat away the foundations on which this kind of country and this kind of government rest.

For instance, polls have shown that large numbers of employees have an unbelievably mistaken idea of what happens to the money taken in by corporations. They think that only 25 percent of corporation income goes to employees—and 75 percent to the owners. The truth is that of all the money in a corporation going to employees and owners, the employees get 87 percent and the owners 13 percent.

A breakdown of total national income also produces some significant facts. Two-thirds—66⅔ percent—is received by employees. Professional people, farmers, landlords and others get a share of the remainder. Owner-stockholders are well down the list, with 6 percent. Then, of that 6 percent, about 2½ percent, on the average, is retained in the business for expansion, machinery and similar uses.

The people who use the tools of industry get the big share of industry's earnings. The people whose savings provide the tools get a far, far smaller share. And that is one of the reasons why capitalism has provided the highest mass living standards ever known.

The Portuguese Colony of Angola

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

UNIAO DAS POPULACOES DE ANGOLA
DELEGATION ABROAD

The subjugation of the former sovereign and independent African States has more often than not been the result of fradulent trade transactions, or the assertion of the right to the strongest over the weakest.

One of the most characteristic cases of this colonization of an African people is undoubtedly the Portuguese colony of Angola. Angola is the largest Portuguese African possession with 1,246,700 square kilometers and 4,145,184 inhabitants of whom more than 300,000 are white.

PORTUGUESE COLONIALISM

A prime factor in the evolution of a people, especially a colonized people, derives from the contradiction colonialism entails. That is to say, the economic, political, cultural, religious and social manifestations of Portuguese colonization have greatly influenced the Angola nation in its present form. What are these manifestations?

Economic manifestations

Every colonization is above all an exploitation of the national resources and soil of the colonized country to the advantage of the colonizer. The economic policy practiced by Portugal in Angola is governed by what is now universally called the "Colonial Pact," whatever its outward manifestations.

Produce of the soil and subsoil of Angola feeds the Portuguese consumer market and reciprocally the products of Portugal have priority access to Angola markets. Industries are not nonexistent, they are even encouraged, such as cotton spinning and weaving mills, sugar and cement factories, large plantations of coffee and cocoa, and the massive and abusive exploitation of cooper, diamond, manganese, bauxite and gold.

This is to say, industries are established in Angola only insofar as they do not duplicate Portuguese home industries. It is nothing more than the exclusive colonial system. There exists between Portugal and the Portuguese settlers in the various African territories of Angola, Mozambique, Guinea, and Sao Tome, close solidarity, as evidenced by the preferential customs tariffs. Portugal invites foreign capital for commercial exploitation of Angola's resources but she does not tolerate any foreign initiative which could bring about the development of the colonial territories.

Political manifestations

The consequences of such an economy in the field of politics can be summed up in the following terms: Political unification and departmentalization of Angola. Portugal in effect seems to be a unitary state with one territory. But the population of this so-called unitary state is not homogeneous. It comprises in effect the following five categories:

Portuguese born in Portugal: Portuguese born in Angola or Mozambique who cannot do national military service in Africa. (African-born Portuguese are excluded from national military service in Africa for fear that they might join forces with the African majority, as happened in Brazil).

Mulattoes enjoying the same privileges as the whites born in Africa: Assimilated

Africans (Assimiladoes) whose wives are exempted from forced labor and whose children enjoy the privileges of continuing their education in the all too rare secondary schools. Besides this, Assimiladoes have the privilege of paying taxes like the whites—and quite naturally, there come last the millions of black aborigines of Angola. This last category is separated from all the others by the color barrier, with all it entails of racial emasculation.

Cultural assimilation

In the inevitable interpenetration of Portuguese and Angola cultures, Portugal has always sought to make Portuguese culture predominant, and it would be no exaggeration to assert that Portugal practices spiritual assimilation of the indigenous population. Roman Catholicism remains the state religion and missionary zeal seeks to destroy the traditional culture and to render brutish the colonized with the pretext of making them identical to the colonizers. The religious organizations are themselves distorted and espouse completely the colonial policy of which they have become the veritable and completely devoted auxiliaries.

Interracial education and social life does not exist since racial segregation is rife, and altogether Angola boasts of 68 African pupils in secondary schools, according to the American author John Gunther. It must be mentioned that only 5 percent of the children of school age can attend the rudimentary primary schools which exist. The remainder are marked out as victims of a system of exploitation second to none.

In 1956 there were 245 educational institutions for the entire territory of Angola, including 112 private institutions, attended by 16,114 pupils, broken down as follows:

Government primary schools

Children of white persons born in Europe	2,531
Children of white persons born in Africa	3,382
Children of mulattoes and grandchildren of whites	3,210
Children of Africans	737

Private primary schools

Children of white persons born in Europe	1,290
Children of white persons born in Africa	1,429
Children of mulattoes and grandchildren of whites	1,109
Children of Africans	2,446

It should be noted that the 737 primary school pupils in government schools are all children of indigenous assimilated public officials.

Social consequences

Far too much could be said on this score—the opulence of the colonizers and settlers triumphing beside the latest misery of the colonized, but we content ourselves with recalling briefly that forced labor constitutes the essence of the social policy of the Portuguese in Africa.

In effect, there is applied in the villages the system of forced labor which consists in recruiting men, women, and children, called contratados and the valuntarios. This is done through African supervisors called regedores under the direction of the administrators and chefes dos postos who then supply them to the concessionary settlers who employ their labor to work on coffee and cocoa plantations, mines, and fishery. More often than not, members of the same family toil away in different plantations. Very often at the end of their term of forced labor, which sometimes lasts 24 months, they are not reunited, some of them having died or been killed in the course of their work.

Working hours are from 5 o'clock in the morning to 7 o'clock in the evening, that is 14 hours a day, Sundays included. Each worker is allotted a fixed task which he is supposed to finish by the end of the working day or else run the risk of persecution.

The stipend allocated is not only ridiculously small, since it scarcely amounts to $40 for 24 months, but an amount fixed by the authority entrusted with payment is deducted for tax. This deduction operates automatically without the worker daring to discuss it, under pain of deportation.

Another category of workers, comprising both men and women, is allotted to building and maintaining roads and bridges, without stipend, and to crown it all, they must use their own tools.

The number of the indigenous workers maintained under forced labor annually in Angola is broken down as follows: From 5 to 14 years old, 100,000 people; from 15 to 50 years old, 500,000; from 50 to 70 years old, 100,000; for a total of 700,000 people.

The Portuguese Government affirms that there exists a labor code as from 1928 which protects the native in Portuguese African territories, while the reality proves abundantly that the contratados and voluntarios toil away in slavery conditions in contravention of the antislavery convention of 1926 ratified by Portugal. There results from this in addition a mortality rate in excess of the birth rate.

Most of the time the villagers take refuge for months in the forests in order to escape conscription. In the villages, people are searched and the natives are compelled to pay extra taxes on their possessions.

What is more, any short of removal from one village to a neighboring one is subject to administrative control and all villagers who do this without the proper formality "Guia de Desembarco" run the risk of being immediately sent to coffee plantations.

This measure is intended to exercise control over the laborers and thereby to prevent desertions among them. Military patrols called "Guarda Fiscal" go about the roads and paths in order to reinforce this measure.

For over 20 years the Colonial Administration of Angola has been depriving the natives of their plantations, forcing them into the arid unproductive areas, and has built up for itself large estates where liberty does not exist, because the administration itself exploits a large portion of them and allows companies and individual colonists to exploit them. Several European colonies have already been created which are entirely closed to the African, particularly at Cela, Matala Libollo and Amboim, Southern Angola.

The first condition of the operation was the occupation of Angolan soil. The theft of lands was thus systematically organized. A decree anticipating the evacuation of all of the villages was created and at the beginning of 1931 the native populations in the villages received the order to leave the regions in which they lived without any indemnity, in order to go to construct other villages in the arid and unproductive regions. These villages are actually all along the highways.

This massive displacement of the populations permitted the colonist to appropriate, in emulation of one another, all the plantations and lands under the pretext of occupation of abandoned properties.

These populations were transformed into an immense subproletariat and were considered foreign on their own soil. This unfortunate and deplorable situation provided the colons with cheap manual labor to the great profit of Portuguese capitalism and its accomplices.

The Portuguese colonial economic system which makes Portugal the sole beneficiary of the products of the surface soil and the subsoil of Angola, with an oppressive internal protectionist policy, is fundamentally opposed to the interests of the indigenous masses.

The concentration of property in the hands of the Portuguese colons under the protection of the Colonial Administration plunged the native populations in the most cruel misery which is without equal in colonial annals. They are truly destitute of all and are subjected to the most satanic forced labor, unqualified pillage, and whiplashes.

Portugal hopes to be able to make of Angola a settlers colony. They want a European population equal or superior to the native population.

It is thus that Mr. de Sa Vianna Rebello, Governor General of Angola, was able to declare in 1958:

"Each family of colons costs the state 1 million for its installation. But one cannot envisage the revenue of the colonist solely on the economic plan. We must consider rather and principally the returns of the colons under the plan of our policy in Africa. These colons will increase so that there will be a greater number of Europeans who will install themselves on the African soil, drawing from it a healthy easy life. The problem is this: to attach the Portuguese to these lands in such a manner that he will love them as much as his village in Portgual. One part of the cost which the state makes for the colons is reimbursed by the latter, the rest constitutes, let us not forget, an amelioration of the national inheritance by the creation of routes of telephone lines, of public services and by an increase in the value of lands which are uncultivated. As soon as the colon settles down, as is the case at present, we always come out the winner. Now that is precisely what matters: to gain the cause with the influx of Europeans, to gain Europeans for Africa. Angola is very large and we are here to remain. We respect what is said and done elsewhere, but as far as we are concerned, questions of autonomy and emancipation do not arise and we are very vigilant to see that they remain so. As soon as the colonist establishes himself, as has so far been the case, we always win through. Now this is precisely what matters, that we should win through by bringing in more Portuguese."

Three months ago, in welcoming Mr. Cornelis, Governor General of the Belgian Congo, on an official visit in Angola, an official of the Portuguese Colonialist Administration announced the approaching arrival of 2,000 Portuguese families coming from Portgual to install themselves in Angola at the expense of the administration. The ever growing misery of the natives already deprived of means of existence worthy of humanity is only amplified and deepened.

This process does not stop there, moreover. It continues in an implacable manner, deceiving international opinion by a false propaganda.

What becomes of these people to whom the colonial system denies even the right to work?

What becomes of these people who, even in their own country and on their own soil have only the right to die of hunger?

Abject poverty encourages emigration in large numbers into the Belgian Congo and French territory where living conditions are better. More than 1,000,000 from Angola are living outside their native land.

An unwarranted harsh form of pressure is exercised in the collection of taxes. There is no age limit, only death releases the taxpayer. The worst of it is that even emigrants have to continue to pay taxes because if they do not their relatives will be persecuted and drafted to the coffee plantations or road works.

Health

The health services are negligible. There are several serious diseases, the worst of

which is sleeping sickness. There is one doctor to 100,000 people. With malnutrition as a contributory factor, tuberculosis takes grievous toll and about 75 percent of the hospital patients suffer from it. In some areas the building of lavatories is subject to a tax, and it follows that few Africans have any. Naturally the bush is used as a place of convenience and the rains wash the deposits toward the streams and the ponds from which the natives drink at the risk of contracting every imaginable type of disease. This is so because there are no village pumps or tanks.

According to the 1950 census, Angola's African population exceeded 4,000,000. These figures were based on native tax receipts. But other official Portuguese sources put the number of African taxpayers in 1954 at 692.376 with another 1, 1,384.752 "Excused" from tax payment as disabled or unemployable—the old, the sick and the infants. Thus the African population of Angola stands at just over two million, having decreased from 2,700,000 since the 1900 census.

While the African population of Angola has been reduced and incapacitated, Portuguese settlers, during the same period from 1900 to 1950, have increased from 9,000 to 300,000.

Portuguese policy which forces large masses into the channels of integration, in utter contempt for their aspirations toward liberty and justice, clearly leads to a political awakening and a craving for independence. The breaking up and destruction of the rich and age-old tradition of Angola in favor of an imported culture leads the masses to claim more urgently every day a reestimate of their national culture.

As colonization expanded and unified Angola, (which in actual fact enjoyed unity before the European conquest); as it developed interchange, and gave rise to the movement of populations within the territory itself, as well as the constant emigration of the working people of Angola, it promoted in spite of itself the development of a national consciousness that transcended the bounds of the original Bantu tribes.

At the same time the most barbarous forms of oppression and the scorched earth policy that Portugal practices in Angola have proved to be additional unifying factors and have automatically made the patriotism of the people of Angola wider and stronger.

The movement of emancipation at first consisted in an attempt to create family and civic ties among the Portuguese settlers who had established themselves in Angola, and who regarded Angola as their native land, while looking upon Portugal as their country of origin.

Later this movement admitted the masses of Angola's African population, and tended to seek the right to develop a separate Angolan entity, but it did not, however, claim an independent Angola. This explains the creation and the evolution of the African National League (Liga Nacional Africana) since 1929. But what exactly is this Liga Nacional Africana which reflects the real anomalies of Portuguese colonization?

This league is a pseudo-cultural association composed of the Angolan Portuguese who, by law, are considered as Africans, mulattoes, and assimilados (African Negroes), yet all of whom bear the name of Africans.

But it is not surprising to note that only whites and mulattoes form the steering committee, the African Negroes being in the position of poor relations who have no choice but to remain where they are.

It is clear that the consciousness of belonging to a nation, the existence of an Angolan national consciousness, could have turned the movement for emancipation into a plea for an independent Angolan State, as happened in South America. But if the history of Angola has strengthened the patriotism of the Bantu people, the Angolan elements of Portuguese origin have, on the other hand, by looking constantly to their ancient native land, postponed the birth of a new feeling of Angolan nationhood.

The historical movement for emancipation which was exemplified in the creation of the Liga Nacional Africana could not lead to independence particularly as the numerical strength of the original Bantu people and the people of European origin played a decisive part. In this country, as in Algeria, the European section of the population is slow to appreciate the national consciousness because they are faced with an indigenous people who have some knowledge of a higher social standard, and because the harsh repression has not succeeded in whittling them down to a minority as was the case with the Red Indians in America.

In 1928, the High Commissioner, Norton de Matos, in agreement with a certain section of colonial middle-class opinion in Angola, asked Portugal to grant independence to Angola. But his dismissal, coupled with the harsh reaction of Portugal, have proved that these events are, in fact, the real cause of the extreme indifference of those settlers who might have attained the true level of national consciousness that the historical movement requires.

It is a fact that the vast majority of the native Angolans of Bantu origin have realized the existence of the national consciousness, but could only sketch a program for the Angolan national liberation movement. Thus arose the Union of the Peoples of Northern Angola in 1954.

Taking into consideration Angola's history, it was inevitable that the Union of Northern Angola should very quickly exceed the limits of its constitution.

Indeed by forcing its way north, south, east, and west, into every stratum of the Bantu section of the population, even the mulattoes, and the national liberation movement, through secret organization, converted itself into Angola Peoples Union in 1958 and its objective is unequivocal. The Angola Peoples Union makes a strong plea for: Complete and immediate independence for Angola; dignity as opposed to alienation; strengthening of Afro-Asian solidarity; honor as opposed to racial segregation and inhuman treatment.

INTERNATIONAL OPINION

Any African Negro who attempts to raise his voice to put forward any claim whatever is imprisoned, beaten to death, or sent into one of the concentration camps that Portugal has set up in the island of Sao Tome and in Angola (Foz de Cunene, Forte Rossada, Baia does Tigres, Silva Porto, and Porto Alexandre).

A day does not pass without the occurrence of provocations, arbitrary arrests, attacks on individual and collective liberty and massive deportations. A day does not pass that unyielding nationalitists in Angola are not illegally incarcerated and kept in secret, awaiting their disappearance forever.

The institutions only serve to perfect the heavy repressive apparatus in order to drown the legitimate demands of the blacks. No institution capable of defending these human beings exists. A work of sabotage on a national scale is undertaken with the forecast of eternal Portuguese domination. A quick glance at the number of revolts that have been stifled is enough to convince those who in their "Naivete" still imagine that the Portuguese colonists are choir boys. Angola today is one of the worst advertisements for the West that exists throughout the length and breadth of the free world. It would be paradoxical if the preservation of solidarity and amiability amongst the members of the North Atlantic Treaty Organization should be placed above the interests of those defenseless people that NATO exists to protect from alien tyrannies.

The 1914 revolt that occurred in the North of Angola as a result of nationalist activities by Buta and his associates to put the brake on deportations to the islands of Sao Tome and Cape Verde meant a series of punitive expeditions which lasted 2 years and a state of siege which consumed 10 years.

In fact, from 1888 to 1929, the number of workers deported to the island of Sao Tome rose to more than 200,000 men. And when the scandal was uncovered, only 10,000 were liberated and sent back to their villages, leaving many villages in Angola still depopulated. At present the system has changed and the people of Angola are slaves in their own country.

The former Minister of the President, Mr. Marcelo Caetano, said inan official report:

"If it is certain that the Portuguese generally treat the natives in a more paternal and understanding manner than do the English, there are, however, against us two circumstances which bring grave prejudices against the success of our colonial policy and which determine in a large measure the reduction in the populations of the two colonies, Angola and Mozambique: the blind greed of the landlords and the system of forced labor."

Also the former deputy, Henrique Galvao, now in exile in Argentina, wrote:

"That which is done under the pretext of custom or habit, condemned by law, but imposed by means of circulars and official orders of a confidential nature, exceed all the limits of dishonor in administration. From one point of view, the situation is worse than during the period of pure slavery. Then, when a black was bought like an animal, he represented a property which his master was interested in maintaining, much as he was interested in caring for his horses and cattle. Now, the black is not purchased; he is simply borrowed by the state although he is theoretically a freeman. And the landlord is indifferent to the fact that the black falls sick or that he dies; he is interested only in getting the maximum amount of labor while the black lives; if the worker becomes ill or dies, the landlord will demand another. There are landlords who have had 35 percent of the workers die during the period of their contracts. And nothing has been heard of any landlord being deprived of more workers when he has requested them."

In the Congolese weekly Presence Congolaise published at Leopoldville (February 21 issue) Me Joseph Ngalula posed the following questions:

"More than 200 of the repatriate undesirables of Leopoldville which the administration drove back in great numbers toward the bush are, it appears, from Angola. The authorities expell them from the Congo and are going to resettle them across the frontier in the hands of the Portuguese.

"Extraordinary commotions circulate about this subject. They say that scarcely arrived at the frontier, the repatriates are stripped of everything even to their last piece of baggage. Mountains of baggage accumulate alongside the frontier post. The repatriates, far from being taken back to their own villages, have been deported by the Portuguese authorities into concentration camps where they are placed under forced labor. Can the authorities deny these rumors which we hope are false? Have the Belgian authorities no interest in the fate of these men whom they turn over to the Portuguese authorities? It must not be forgotten that even if those expelled are neither Belgian nor Congolese, they are above all human beings. Belgium has signed the Human Rights Charter and thereto has a responsibility. It is not a question, let us not forget, of pillagers or thieves, but of simple people who are unregistered."

In effect in Angola the liberty of the individual, freedom of expression, worship, and association do not exist. Consequently a

national liberation movement like the Union of the Peoples of Angola cannot exist except as an underground movement in the country, whose aim is enlisting international opinion in support of the nationalists of Angola.

In point of fact, since its inception in 1954, the Union of the Peoples of Angola has maintained a constant struggle. In December 1955 the general discontent of the people was shown by the public scenes when the north systematically took a stand against the system of forced labor and constant abuses. In February 1956, Portugal reacted, making a series of arrests and deportations. Ambrosio Luyanzi was among the leaders who were persecuted to death, while patriots such as Figueira Lelio and Liborio Nefwane were exiled to the concentration camp of Silva Porto.

On the international plane, the Iron Curtain which separates Angola from the rest of the outside world has hardly encouraged any systematic campaign in connection with the tragedy of Angola. However, the visit to Angola of some West African brothers from Ghana and Liberia during the C.C.T.A. Conference in 1957 warmed the hearts of Angolans who interpreted the gesture as a mark of active solidarity. The masses benefited from this visit, although it was followed by dreadful instances of the arrests of men, women and children. People are still asking for the whereabouts of the patriotic militants, Julio Afonso, Issaias Kamutuke, Cunha, Alfredo Benga, Loureiro Joao Sequeira and their families.

But patriotism will express itself and it is no use failing to recognize as just the stand taken by so many members of the Angolan resistance movement; the people of Angola will not give in. In August 1958, the African Manifesto saw the light of day. This document condemned the horrors of 500 years of Portuguese colonization and exhorted the people of Angola as one man to assert with all dignity their right to self-determination, so that Angola might recover freedom, justice and prosperity.

Since the tragedy of Angola is already well known to those concerned, the people of Angola deplore the attitude of silence adopted by the most competent international bodies. And yet no country that loves justice and freedom can fail to see that this conspiracy of silence is a contributory factor, since it unquestionably creates the impression that the greater part of mankind holds sacred the most retrograde form of colonialism as practiced in Angola.

When in 1956, Iraq tried to condemn Portugal through the United Nations for its colonialist oppression, the Portuguese delegate declared that from the constitutional and legal point of view, there was no difference between the Portuguese provinces and African territories under Portuguese domination.

In 1957, again concerning Angola and Mozambique, Mr. Marcelo Caetano, the former Minister of the Portuguese Presidence du Conseil, declared that the territories in Africa under Portuguese domination were an integral part of the Portuguese provinces.

These purely colonialist arguments seem to have convinced certain countries which have known the bitterness of colonialism. But it remains however, to point out that the representatives of Portugal at the U.N. speak only of the provinces and not of the people. Now it is not a secret to anyone that there is a difference as night from day between the civil rights which benefit the Portuguese people and those of the people of the African colonies.

Between the Portuguese nation and the people of the colonies, there are no fundamental characteristics which permit one to identify the two as a common nation. There is no historic community, no territorial community, no community of economic interests, no spiritual and cultural community and no common language. What do exist are antagonisms aggravated day by day by racial discrimination and inequality of even the most elementary rights. What does exist is a growing revolt of the colonial peoples against the ferocious colonial policy which exploits them, oppresses them and pillages their country, their riches and their natural resources.

It suffices on this subject to pose a question: what importance does the government of Portugal give to the desires of millions of inhabitants of the Portuguese colonies when there is not a single native representative in the national assembly?

In spite of this, in international affairs, Portuguese territories in Africa are considered as an integral part of Portugal without, of course, the Africans having the least means of expressing their wish to be Portuguese or not.

The truth is that Portuguese colonialism in Angola is far from being a civilizing and humanitarian work. One cannot, out of respect for modesty, cite all of the cases committed daily against the native populations, and the methods used in spite of international rights. The administrative authorities have not the right to violate such rights without seeing raised against them all the forces of the entire world concerned with the welfare and love of all humans.

It is certain that there are honest people who will condemn the flagrant violations of liberty which each individual and each people should enjoy.

The collapse of the colonial system which continues in Africa under our eyes with an accelerated rhythm is not an unusual phenomenon. It is not necessary to be a prophet in order to predict that this powerful force will move rapidly to its conclusion. But in spite of this great current, that of the liberation of the peoples, the colonialists and the imperialists still have hope of being able to maintain their positions.

Above all they do not wish to be conscious of this transformation of the times and of the world. They do not wish to understand that this need of liberty, equality and justice is felt by the Africans so much the more since they were subjected to injustice, slavery, and inequality.

If there is any place where the utterance of the word "independence" signifies something else, it is certainly Angola.

There is no doubt that the political policy employed by the Portuguese in their African territories is still a mystery. What is perfectly obvious is that in those territories it is cruelly forbidden to utter the simple word "independence." In this respect it may be recalled that the Governor General of Angola, Sa Vianna Pebello, declared this year in a press conference: "The Portuguese nation is indivisible. We cannot permit any opinion whatever which tends toward secession or independence. It will be a crime of high treason to express such ideas."

Angola is a province of Portugal and as such it should be considered as enjoying the same liberties and considerations as Portugal. Angola is therefore free. But where is the proof that Angola is independent, or rather that it enjoys the same principles as Portugal? From everywhere laments and complaints shoot out from the families of assassinated blacks, from deported blacks, and from blacks who have been tortured for having dared to speak of independence or for having simply tried to ask that they be granted human dignity and liberty.

For 500 years Portuguese colonialists have been masters in Angola. That is a long period to have studied the life of the native people and should have resulted in considerable progress. This has not figured, however, in the plans of the Portuguese colonialists. Hiding themselves behind hypocritical statements according to which there is no racial discrimination and in which they talk about their good acts, the Portuguese slave masters have created the most violent system of colonial exploitation. The All-African People's Conference held in Accra in December 1958 openly stated in its decisions that the native people of the Portuguese colonies live under a Fascist colonial regime and are deprived of the most elementary human and democratic rights. A small group of white colonialists monopolized elementary human and democratic rights. A small group of white colonialists took over the immense wealth of Angola and is ruthlessly exploiting its population.

Even the Governor of Moxico, a district in Angola, Senhor Daniel Rodrigues Bastos, was forced to admit in 1956 that the food situation now is actually worse than it was 100 years ago, that education was on or about the same level as it was during the European invasions, and that 99 percent of the Angolans were illiterate. Nevertheless, according to the 6-year plan for Angola's development, about which there is so much publicity, the Portuguese administration has allocated to education a sum which is exactly five times less than the sum for the enlargement of the country's ports whose main purpose is to export looted wealth.

The Portuguese colonies in Africa, especially Angola and Mozambique, possess immense resources. Oil is found in abundance, as well as coal, iron, manganese, gold, diamonds, copper, and other raw materials necessary for the development of a powerful and modern industry. The lands and the climate favor the development of agriculture and stockraising. The rivers and coastal waters favor flourishing fisheries. However, generation after generation have lived lives of misery and ignorance, subject to unparalleled and inhuman exploitation and persecution. The laborers die premature deaths for lack of medical assistance. African culture is despised, forgotten and destroyed. African languages are discredited and their development is checked. The contribution of the black man to the development of human culture is reduced to nothing.

Let us add to this the degrading traffic with the slavers of South Africa (for the gold mines of the Rand 100,000 Africans from Mozambique are supplied annually which represents for the Portuguese state a revenue of over 50 million escudos) and the agreement with the Rhodesian and Nyasaland Governments according to which the Governor General of Mozambique has authorized the recruitment in the district of Tete of an annual total of 100,000 Africans to work in the mines. This later agreements establishes that the "recruiters" will pay an annual recruiting tariff, the recruits have to pay a passport tax, as well as the renewal of the passport and a native tax. As for the working conditions imposed on the mineworkers of the Rand, and the deadly results that this emigration has upon the health of the population, the Minister Marcelo Caetano notes in the report already quoted "the long stay of the natives of the Portuguese territories in the Transvaal mines provokes the destruction of the race by sickness (pneumonia, silicosis, tuberculosis). He who has once visited the compounds of the Rand mines cannot prevent himself from experiencing a certain emotion in watching the Negroes who are treated as in a system of concentration camps, "in an atmosphere of sheer zootechnical preoccupation."

He who travels over the territory of the southern province of Save is forcibly struck by the desolation; he meets only women and old people, almost everywhere. And the magnificent race which inhabited this region perishes progressively gnawed in its vitality,

corrupted in its morals, undermined by terrible sickness, and by abominable vices.

Portuguese authorities practice a so-called policy of assimilation. But what does that mean? It appears that the native people can become Portuguese citizens but to have the right to do so they have to go through many severe tests which, in actual fact, make it practically impossible for them to do so. Less than 1 percent of the Angolan population was found to be worthy of the doubtful honor of being granted the right of obtaining citizenship in their own country.

The statutes of indigenato created by decree law No. 39,666 of May 20, 1954, and the assimilacao serve only to conceal the Portuguese version of South African apartheid.

The Portuguese colonies are among the oldest on the African Continent. But, Angola with its native population of a little more than 4 million persons includes only about 290,000 persons who are considered to be evolved (and this is according to official statistics) and of these more than 260,000 are of white race. In Mozambique the situation is even more striking, for of a population of 6 million there are only 4,349 Africans who have been declared evolved. Finally, in Guinea of the 510,000 inhabitants, only 1,500 are included among the evolved. The total population of these three African colonies, according to official statistics, is 10,510,000; of this total 10,214,151 are considered unevolved. This figure gives a clear indication of what the so-called civilizing mission of the Portuguese slavemasters has accomplished in five centuries of domination.

Before the Chamber of Mines of Transvaal and the Orange Free State, the vice admiral Vasco Lopes Alves, Portuguese Minister of Colonies, declared:

"We are accomplishing a parallel task in our territories and, given the fact that Western civilization is threatened on this continent, South Africa and Portugal should work together."

These words clearly express the segregationist policy symbolized by apartheid, for South Africa does not emancipate the blacks—it crushes them and prevents their evolution within a multi-national community.

Furthermore, one may wonder if it is the "Civilization of Porto wine" which the Portuguese introduced into Africa to stupefy the African which is threatened, or simply with privileges of Portuguese and other vested interests.

In order to leave the Africans in the most complete ignorance, the Portuguese absolutely limit instruction to some 4 years of rudimentary primary school education where they learn Portuguese, arithmetic and writing, i.e., all that is necessary in order to become a trader, and nothing more. The Portuguese authorities forbid the missionaries to hire qualified teachers so as to raise the level of instruction. The recent letter from the Vatican to the bishop of Portuguese Africa in which the Holy See complains of the slowness in forming local clergy—the Portuguese colonies are the sole African territories where there is still no African bishop—confirms this general neglect of education.

In the course of the debates of the session of the Legislative Council (No. 60) of October 20, 1958, presided over by the Governor General of Angola, Horacio Jose de sa Viana Rebello, one of the members of the Council, Mr. Manuel Bento Ribiero made, among other remarks, the following

"Native education, as it is administered in Angola, does not correspond to the obligations of sovereignty. One may note an ever-growing desire among the natives to learn, our schools are overflowing. During the school year 1958–59 we could have had 50,000 pupils if we had had more means to pay the teachers and to build new classrooms. We must confess however that the situation is less alarming, thanks to the contribution that is made by the foreign Protestant missions to the instruction of the natives without any remuneration from the State. To conclude, I request the President that the conditions of the problems which affect the lives of the natives should be revised, above all in the domain of native education, in order that it should undergo an expansion worthy of the secular presence of Portugal in this country."

In his reply, M. Viana Rebello congratulates M. Ribeiro, who, he says has demonstrated forcibly the lacuna of the social regime of which he is the spokesman within the Council to such a degree that he owes it to himself to make further comments. He continues by saying, the population of Angola being 4 million strong, the percentage of educated natives does not reach even 1 percent. "This argument is often used in international assemblies by our most sworn enemies. In relation to 4 million individuals, this percentage is so infinitesimally small that I could say that nobody has obtained any education whatever during the years preceding 1955."

Frightened by the spread of the national liberation movement in Angola, Portuguese colonialists decided to take steps to intimidate the native population. Weapons have been given to all the Portuguese settlers. The Portuguese Government recently sent to Angola a parachute unit and a large number of fighter-bombers equipped with napalm bombs. Then so-called "manoeuvres" were carried out. Even Agencia Portuguesa was forced to admit that this frightening demonstration of force was made to warn the 4 million Africans in Angola against their nationalist action. Fearing the development of a movement which was echoing the freedom struggles of other colonial peoples at the same time that they were enforcing the repressive measures of the police (PIDE) and the military, the colonialist Portuguese were trying to prevent the people they dominate from contacting the outside world. From their position in the United Nations where they deny that the colonies are colonies, and from their active participation in conferences in coalition with other countries which have African colonies to fortify their colonial positions, they repress movements of liberation and continue to propagate the plans of the Salazarists to rehabilitate colonialism.

For many years a veritable atmosphere from hell reigns in Angola. The people have been victims of an unmerciful foreign domination—a domination without soul and one which scoffs at the very foundation of Christianity and Western civilization.

The international press having pointed out the odious atrocities which the authorities even in Portugal are perpetrating, we may leave to the imagination of world opinion the inhuman and barbarous form that these atrocities take in the colonies towards human beings without defense and for whom no account is rendered.

That leads us to think of the words of our Lord Jesus Christ. When carrying His cross, He marched toward Golgotha, and as women were lamenting behind Him, He said, "If they do these things in the green tree, what will they do in the dry?"

In so doing, they forget altogether that the government in these countries is not an instrument with which to torture or persecute the indigenous people, but a medium that Portugal has placed at their disposal to help them.

On the island of Sao Tome in 1953, Portuguese colonialism revealed its true face. In this year in the month of February, because of a provocation by the Governor, Carlos de Sousa Gorgulho, who increased production by forced labor, the inhabitants of the island arose in protest. The Government then took brutal and bloody repressive measures. Three thousand and eighty persons were killed. Thousands were imprisoned, hundreds tortured and assassinated; entire villages were sacked and burned, and their people massacred or deported. Blood flowed in a flood. The people filled the prisons. Most of the black civil servants were arrested and sent to the brigades of Fernao Dias where they were tied with heavy chains attached to their necks, with bands around their legs. They were then forced to carry large buckets of water on their heads while standing submerged in water up to their necks. Many in prison were tortured to death to make them confess. Many of them were forced to submit to electric shocks for hours at a time.

Many uprisings have already taken place in Angola, but on each occasion the repression has been bloody.

An aura of hell with all the evils comparable to the genius of Satan, rages in Angola and Mozambique. One cannot describe the events which happened since the recent uprisings in the Belgian Congo and Nyasaland. Troubles having broken out in Angola, about 200 members of the nationalist movement, among whom were some of the elite of the country (some of whose name are listed below) have been deported to an unknown destination. The most frightful stores are circulating concerning the fate which they have suffered. These are some of the names: Pedro Antonio Benge, Fernando Pascoal, Figueriredo Alfredo, Andre Rodrigues Domingos, Tanciero, Sebastiao Gaspar Domingos, Gaspar d'Almeida, Nobre Pereira Dias, Agostinho Mendes de Carvalho, Jose Vieira Dias Van Dune, Belarmino Vandune, Correio, Lucrecio da Silva, Almeida Pires da Conceicao, Armando Ferreira, Teofilo Kinkela, and Dr. Boavida.

On August 15, 1959, a Congolese newspaper "La Presence Africaine," published at Leopoldville (Belgian Congo), printed the following:

"Once again, neither the policy of intimidation nor demonstrations of force have been able to produce any effect on African nationalists. In fact, a communique from Agence Belga of a few days ago announced that about 50 people were arrested in Angola for a crime against the internal and external security of the Portuguese State. A most pronounced silence is being observed in official Portuguese circles on the subject of charges against the accused, but they are charged with having participated in an activity which is qualified as communistic.

"It is difficult to obtain more complete information on the troubles, since the Portuguese colonial administration does not permit any kind of freedom of the press or other types of freedom recognized in other African territories. However, apart from information from Agence Belga, other information has reached us directly. This group of patriots, according to this information, presented a manifest to the government of Dictator Salazar in which they requested independence in 1960 for the colony of Angola. This group of patriots which is not at all composed of Communists or fellow travelers, were victims of outright duplicity "a la Lacoste." It is said that the Portuguese Government made these poor unfortunates board a vessel. There was an accident and they were all drowned. In our eyes, this justifies a very thorough investigation. The United Nations must intervene."

Once again, it is a question of asking oneself just where are the liberties and well-being that the Portuguese are always talking about. On the contrary, military reinforcements continue unceasingly to cover this ancient territory, about which the Portuguese eternally and compulsorily demand silence.

This is the reason that the cries and moans of the poor Angolans have remained thus far "vox claimantis in deserto."

Out of the numberless cases of atrocities and barbarities in which the Portuguese are engaged in Angola, the following examples are only a few.

In January 1958 a contract laborer from the village of Kaluka detached from Administration office of Belem (territory of Sao Salvador), a region in northern Angola, was killed by one Lemos, a Portuguese settler. The victim who had been kicked in the lower stomach died instantly.

When the corpse was taken to the morgue of S. Salvador, Dr. Barades, a government doctor who performed the autopsy, concluded that the man had died of natural causes and declared that being kicked had nothing to do with the man's death. Rather it was due to the Negro's poor health.

These allegations can be refuted however, since all contract laborers are given a medical examination before being sent to any job. Furthermore, because of the bruises found on the man, the authorities had refused to allow the corpse to be returned to the family. For this reason the Administrator, Mr. Matoso Pio, took care of the burial himself.

During the years 1957–1958, Mr. Alfredo Veloso, Chief of the Luvo Station, on the border of Northern Angola and the Belgian Congo, compelled women recruited from the surrounding villages, under the threat of imprisonment, to go down into the Luvo River to retrieve sand. This activity exposed the women to the greatest peril because the river is infested with crocodiles. Only providence prevented any mishaps from taking place.

These few facts bear witness to the state of mind which leaves no doubt that Portuguese colonial policy continues according to the local inspiration of the administrator and, more often than not, according to the whim of the chiefs of the administrative stations.

Thus, in Angola, apart from the administration, there are only three categories of people: those deported, those in prison, and those doing forced labor.

These facts and this testimony suffices to prove the inconsistency of the affirmations of the Portuguese Government according to which the colonies are an integral part of the Portuguese nation, and according to which are proclaimed the moral and political unity of this so-called nation which exists only in the imagination of Salazar's policymakers.

It is also regrettable to state that the charter of the United Nations which contains in its clauses a section which lays an obligation on administering authorities to insure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses, and the development of self-government, is crushed under foot by those who are at the foundation of its elaboration. Thus the argument of communism behind which the Portuguese Government entrenches itself, is one of these pretexts aiming to set aside this resolution of the charter, for the sole purpose of achieving its egoistic interests.

We thank in advance all those who by charity and solidarity with mankind, and consequently in conformity with the world-wide, humanitarian community, join together under whatever form it may be, to aid the people of Angola, in order to find a solution to this painful problem on which depends the existence of millions of souls.

Thus, united for the love of humanity, in search for a peaceful solution, we shirk our duty, neglecting the solution which present circumstances imposes on the entire world. It is not only a question of nation and nationalism but of survival, for the Angolans have been exhausted through long periods of slavery and repression.

We hope that the universal conscience, supreme judge of the peoples and nations, will judge this painful situation.

Samuel I. Newhouse—Publisher With a Cure

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. RIEHLMAN. Mr. Speaker, Samuel I. Newhouse made a gift last month of $2 million to Syracuse University to establish what is described as the world's largest center for the study of journalism, television and other media of mass communication.

This most generous gesture, made by one of the country's outstanding journalistic figures, has received wide acclaim across these United States but the people living in my congressional district—Syracuse, N.Y., and the surrounding Onondaga County—have long been aware of, and benefited from, the interests and activities of Mr. Newhouse. He owns the two fine daily newspapers in Syracuse, the Post-Standard and the Herald-Journal, as well as radio and television facilities.

Mr. Newhouse has been an important figure in our community and, in order that my colleagues might be able to learn more about the remarkable achievements of this benefactor of communications, I am enclosing, under leave to extend my remarks, the following article from the New York Times, January 26, 1960:

PUBLISHER WITH A CURE: SAMUEL I. NEWHOUSE

The restless 5-foot-3-inch son of Russian immigrant parents, Samuel I. Newhouse has amassed more than $150 million as a doctor of an uncommon sort.

MAN IN THE NEWS

For 38 year, Mr. Newhouse, who donated $2 million this week to Syracuse University, has specialized in buying financially sick newspapers and curing them, sometimes merging them. His medicine works, judging by his ownership of 14 newspapers, composing the third largest newspaper group in the country, and an assortment of magazines, television and radio stations.

At the age of 64, looking youthful despite chronic insomnia, still bustling on a stopwatch schedule, Mr. Newhouse continues to shop for newspapers.

"I'm having too much fun to quit," he says.

The Newhouse formula for putting a newspaper ledger in the black consists of chopping costs hard and perking up advertising, circulation, and mechanial operations while leaving editorial matters to local management.

PAPERS OPPOSED

In Syracuse, two of the Newhouse newspapers—the Herald-Journal, which has backed the Democratic Party, and the Post-Standard, of Republican sympathies—have attacked each other editorially. Mr. Newhouse is a registered Democrat.

In conversation, Mr. Newhouse displays a gentle manner. But in business, "S. I." (he says the I, is just an initial) can be tough. He has not backed off from long, costly labor strife when he has felt that a union was blocking the most efficient operation of one of his newspapers.

Born in New York City, eldest of eight children, Mr. Newhouse went to work at the age of 12 for a lawyer, Herman Lazarus, who sent the youngster on his career 4 years later with the order: "Sammy, go and look after the paper."

A self-styled brash kid, the young Newhouse took over the ailing Bayonne Times, of which Mr. Lazarus was majority stockholder, and soon turned it into a profitable venture.

He studied in night school, passed his bar examination and, at the age of 26, bought his first newspaper, the Staten Island Advance, for $98,000. Thirty-three years later, he purchased the Birmingham News and its radio and television stations for $18,642,000.

In addition to his Syracuse newspapers, Mr. Newhouse also owns the Jersey Journal, the Newark Star-Ledger, the Long Island Press, the Long Island Star-Journal, the Harrisburg Patriot and the News in Pennsylvania, the St. Louis Globe-Democrat, the Portland Oregonian and the Huntsville Times in Alabama. Of his 14 newspapers, 12 were losing money when Mr. Newhouse bought them.

With his newspaper properties flourishing, Mr. Newhouse inquired about a year ago if the Curtis Publishing Co., the leader in the magazine field, was for sale. The answer was no, but Mr. Newhouse did not give up his intention to expand into magazine publishing.

OFFICE ON THE RUN

Mr. Newhouse and his wife, Mitzi, live in a 12-room Park Avenue duplex, but it is hard to say just where Mr. Newhouse's office is. Indefatigably on the move by train and air and in his telephone-equipped black Cadillac, Mr. Newhouse works mainly out of an old, battered briefcase.

He has something of an office at the Newark Star-Ledger, where he shares a pool secretary. Reputed to have an encyclopedic knowledge of the newspaper field, Mr. Newhouse is well known for quick telephoned decisions.

Mr. Newhouse says he has drawn up a will that will keep his newspaper empire intact after his death.

"I dont' want any outside interest, such as some banker, dictating how the papers should be run," he declares.

SONS TO KEEP CONTROL

The newspapers will be bequeathed to a philanthropic foundation free of inheritance tax. Mr. Newhousers two sons, Samuel I., Jr., 32 years old, who is in charge of the Newark Star-Ledger, and Donald Edward, 30, who heads the Jersey Journal, will retain control through the possession of the only voting stock. Mr. Newhouse said this stock would consist of only about 10 shares, and his sons will have to depend on their salaries for their income.

"They will have jobs; if they don't do their jobs well, they will be out of luck," he said.

Mr. Newhouse said he had earmarked 10 percent of his estate for his wife, whom he described as "my heavyweight." (She is 5 feet tall and weighs 74 pounds). When Mrs. Newhouse married the publisher in 1924, she gave up her school studies in fashion designing. Last year, she was back in the fashion world. Her husband bought Condé Nast Publications, publisher of Vogue, Glamour and other magazines, and then rounded out these new interests by acquiring Street & Smith publications. Mrs. Newhouse is on the board of directors of Condé Nast.

Mr. Newhouse, who relaxes at the theater and opera, is off this week on another of his diversions. He will fly to Europe on a holiday and will join Mrs. Newhouse, who is viewing the Paris fashion collections with the Condé Nast editors.

The Fine Hand of the FBI

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by Mr. Lyle C. Wilson relating to the activities of the FBI in the Apalachin case:

THE FINE HAND OF THE FBI
(By Lyle C. Wilson)

When the chips were down in the trial of 20 delegates to the Apalachin hoodlum convention, it was the Federal Bureau of Investigation that came up with most of the evidence which sent the gangsters to jail.

U.S. District Judge Irving Kaufman in New York laid on sentences of from 3 to 5 years. The mob was found guilty of no more than conspiracy to refuse to talk and thus to protect themselves by withholding from the Government the purpose of their Apalachin meeting.

The nature of the crime alleged put the matter within FBI jurisdiction. It is not generally understood that the authority for the areas of investigation by the FBI are precisely defined and limited by law or executive order. Congress enacted a law after the kidnaping of the Lindbergh baby to authorize the FBI to act in kidnap cases.

Kidnaping is one of 46 items within FBI jurisdiction by act of Congress or executive order. The list ranges from antitrust investigations to enforcement of the Mann Act which forbids the interstate transportation of a female for prostitution, debauchery or other immoral purposes.

The FBI got into the Apalachin case because it is the U.S. investigative agency responsible for protecting the Government against fraud. In this instance, the fraud consisted of "the misrepresentation or concealment of facts concerning matters within the jurisdiction of the Government."

Smart New York State police work in detecting the hoodlums' presence in Apalachin and in taking instant action was widely remarked before and during the trial. A rundown of the proceedings will show, however, that the FBI furnished approximately 80 percent of the evidence produced against the hoodlum delegates.

Sixteen FBI agents and one former agent were witnesses for the Government. Thirty-three statements introduced by the Government in connection with the trial were prepared as a result of FBI investigation.

The public is little aware of such phases of FBI operations. The communist, fellow traveler and other left-wing operators who, from time to time, attempt to oust Director J. Edgar Hoover or otherwise hamper the operations of the FBI are better informed than is the general public about what the FBI does and why.

There were a couple of more sorties against the FBI during the Truman administration, apparently encouraged by what their promoters interpreted as President Truman's chilly attitude toward the organization. None of these got off the ground although there was published a book denouncing the FBI and proposing Mr. Hoover's ouster.

This book was denounced in the Senate as "an utterly biased piece of propaganda." The author was Max Lowenthal, a Truman associate during Harry S. Truman's Senate days. Mr. Lowenthal, for example, accused Mr. Hoover of reaching out on his own in 1940 for authority to investigate subversive activities in particular and internal security in general.

What Mr. Lowenthal must have known but did mention was that on September 6, 1939, Franklin D. Roosevelt by executive order instructed Mr. Hoover to "take charge of investigative work in matters relating to espionage and sabotage."

Tribute to John G. Butter, Chief Engineer, Iowa State Highway Commission

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. SCHWENGEL. Mr. Speaker, February 1 marked the retirement of one of Iowa's most devoted public servants, John G. Butter, chief engineer of the Iowa State Highway Commission. His years of service are marked by the attributes which characterize the ideal public servant; honesty, integrity, devotion to duty, and a dedication to the public interest.

This type of record should be recognized and I take this means of placing a brief biography before the Members so that proper tribute is paid to a good man and at the same time, the seeds of inspiration can be sown for emulation by those who would seek to serve their community, State, and Nation.

Mr. Speaker, John G. Butter, chief engineer of the Iowa State Highway Commission from April 1, 1954, to the present time, was born at Blairstown, in Benton County, Iowa, on January 3, 1895. His father was a Presbyterian minister.

Two years later, the Reverend Mr. Butter received a call to a pastorate in the city of Omaha, Nebr. There young John grew up. He received his preliminary, grade, and high school education in the Omaha public schools. He graduated from high school in the spring of 1913, at the age of 18.

In September 1913, young John G. Butter, the future Iowa highway engineer, enrolled in the College of Engineering of the University of Nebraska, at Lincoln. He enrolled in the civil engineering course. He wanted to be a civil engineer.

There was an Iowa State Highway Commission in 1913, but young John Butter had never heard of it. This lack of acquaintance was mutual. The Iowa State Highway Commission of 1913 had not heard of John Butter. At that time, the Iowa Highway Commission was a small, embryo organization, located at Iowa State College, at Ames. It had no State road funds to spend, under its own control, on the highways, but it did have a large measure of general supervisory control over the county and township road officers in Iowa with respect to their expenditure of the approximately $5 million per year of road and bridge funds available for their use.

In fact, in 1913, the whole highway problem with which the several States and the Federal Government wrestle today had not yet begun to take shape. In Iowa, as in many other States, there was no State road system—either improved or unimproved. No motor vehicle fuel tax had been levied in any State. No comprehensive Federal Aid Highway Act had yet been passed by the Congress. Each State registered its motor vehicles and collected fees therefor, but, in most States, the rates of motor vehicle registration fees were so low that the funds derived therefrom for highway improvement were grossly inadequate. Worse yet, some of the States diverted a large portion of their motor vehicle registration fee receipts to nonhighway uses.

In 1913, there were 75,000 motor vehicles registered in the State of Iowa. Twenty-five hundred of these vehicles were trucks. The remaining 72,500 registered vehicles were passenger cars. Eighty percent of these passenger cars were model T Fords—"Tin Lizzies." The trucks were small, two-axle, four-wheel vehicles. The multiaxled, dual-tired, semitrailer, cargo vans which swarm over the highways of the present day had not yet been built. Today, there are 1,400,000 motor vehicles registered in Iowa, of which 225,000, or 1 out of 6, are trucks. In 1913, there were 1,258,000 motor vehicles registered in the whole United States. Sixty-eight thousand of these vehicles were trucks. The remaining 1,190,000 registered vehicles were passenger cars. Today there are 72 million motor vehicles registered in the United States, of which 10,800,000 are trucks.

Civil engineering student, John G. Butter, graduated from the University of Nebraska in April 1917, with the degree of bachelor of science in civil engineering. In that month, the United States entered World War I and joined the Allies in fighting the Kaiser's Germany. One month later, in May 1917, graduate engineer John G. Butter joined the U.S. Navy Aviation Corps. He served in that group throughout the war and was honorably discharged in December 1918, after the war was over.

In the spring of 1919, the 38th General Assembly of Iowa passed a comprehensive road bill known as the primary road bill. That act created a State road system known as the primary road system; created a primary road fund for the improvement and maintenance of the primary road system; provided for the voting and issuance of primary road bonds and other means of financing the hard surfacing (paving) of the primary roads; credited all of the net proceeds of the motor vehicle registration fees to the primary road fund and set up the necessary machinery for administering the primary road work. That same 38th General Assembly of Iowa also rewrote the State's motor vehicle registration law and increased the rates of motor vehicle registration fees to just about double their former rates. These two acts became effective in the spring of 1919.

Now, the State of Iowa was ready to really go to work on its road system. These new highway laws, providing for a new and greatly expanded highway program, required immediate and correspondingly great expansion of the State highway commission's staff. Engineers were scarce in 1919, much in demand and hard to come by. Young John G. Butter, 2 years out of the Civil Engineering College of the University of Nebraska and 6 months out of the U.S. Navy, needed work. He applied to the Iowa State Highway Commission for a job and got it. He was hired by the highway commission on October 6, 1919, almost sight unseen, and was sent to Benton County, the county in which he was born.

With the exception of 1 year and 9 months, in the early 1920's, Mr. Butter has been continuously employed by the Iowa State Highway Commission from October 6, 1919, until this time, a total of about 39 years. He started near the bottom of the commission's engineering staff, as instrumentman on a road survey party, and step by step was advanced in rank from one position to the next until he reached the top. He became the commission's chief engineer on April 1, 1954.

A listing of the various positions held by Mr. Butter on the Iowa State Highway Commission's engineering staff sounds like a catalog of all the commission's engineering classifications—instrumentman on road survey party, inspector on construction, resident engineer on construction, division maintenance engineer, assistant district engineer, district engineer, administration engineer—head of the administration department—and, for the past nearly 6 years, chief engineer. Each of these advancements was won by Mr. Butter on his own merits.

Mr. Butter was honest, faithful, dependable, loyal to his job and to his employer. He did not shrink from long hours of hard work. He had the ability to get the job done, and done well.

During his 6 years as chief engineer of the Iowa State Highway Commission, John G. Butter has been the chief administrative officer and engineer in charge of the expenditure of some $430 million for highway construction and of about $75 million for highway maintenance. Not a shade of a shadow of doubt or suspicion as to the honesty and good faith of any of these expenditures has ever been expressed by anyone.

While assigned to highway work in Benton County in the early 1920's, Mr. Butter wooed and won Miss Helen Hayes, employed in the office of the clerk of the district court at Vinton, Iowa, the county seat of Benton County. They were married on November 18, 1921. To that union, two children were born—both girls. One died in infancy. The other, named Joan, is now Mrs. D. F. Pierce of Cheney, Wash.

Mr. Butter is a member of the American Legion. He served as commander of the American Legion post at Council Bluffs, Iowa, where he was stationed for many years; served as district commander of the Legion district in which Council Bluffs is located, and served as vice commander of the American Legion's Department of Iowa. He is a member of the Iowa Engineering Society, past president of Mississippi Valley Conference of State Highway Departments, and past regional vice president of the American Association of State Highway Officials.

Having reached the age of 65, Mr. Butter was, at his request, relieved of the duties of chief engineer of the Iowa State Highway Commission on February 1, 1960. He is not retiring from the commission's staff. He will continue in the employ of the commission, but with the title and duties of consulting engineer, thus adding yet another to the list of numerous positions he has held on the State highway commission's engineering staff in his long and honorable service to the State of Iowa.

Mr. Butter's retirement as Iowa commission chief engineer marks the end of leadership as chief of one of that small group of highway engineers who saw the commission grow from an organization of about 250 employees to more than 10 times that number. He was the first of Iowa's highway chief engineers who had the advantage in experience of having worked his way all the way up the ladder of service in his particular field. His achievement in the quality of service in the field of highway engineers will stand as a challenge to all highway engineers in Iowa and in the Nation. His was a commendable and very significant contribution to the cause of more adequate and more economic highway facilities for all of our people.

Mr. Speaker, John Butter has built a monument for himself, not one of bronze, marble, or stone, and it will not be found in a city square, near the office of the highway commission, or at the capitol of our State. It is found in the hearts and mind of all the people in Iowa who honor justice, fair play, admire devotion to duty and respectability to build highways. It is found in all thoroughfares of Iowa where roads and highways have been built and maintained in the last 40 years.

I join with his many friends who wish for him continued good health and happiness as he continues to live with the folks he has served so well—the people of Iowa.

The Late Honorable David M. Hall

SPEECH
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. DURHAM. Mr. Speaker, I knew DAVE HALL from the days when he was a student at the University of North Carolina, which is located in my home town of Chapel Hill. Everybody who knew DAVE in his student days admired him for his courage in the face of crushing physical disabilities and for his keen and inquiring mind. After receiving his law degree in 1948, DAVE returned to his home community and engaged in the practice of law and also in farming operations, two strenuous pursuits which would tax the strength of a person in robust health.

DAVID HALL's tenure of office here was relatively brief, but already he had made his mark and earned the respect and admiration of his colleagues in this body and in the committee where he so ably served. He was a member of the Committee on Science and Astronautics, an appropriate assignment, it seems to me, for a young man who felt a keen interest in the opening up of a new world. He was devoted and dedicated to his committee work and to it he brought a fine and understanding intellect.

We know that since boyhood DAVE had suffered from a bone infection which necessitated his undergoing more than 200 operations. Through these ordeals he emerged with his fighting spirit still intact, exemplifying the theme of the old ballad of Sir Andrew Barton, which runs:

> I'll but lie down and bleed a while,
> And then I'll rise and fight again.

DAVE always rose and fought again, and even after this last surgical ordeal he was confident that he could continue his career and return to these Halls. Since courage was the foundation stone of DAVE's life and career, the following quotation from Seneca seems to provide a fitting epitaph to our colleague, who never gave in to the vicissitudes of life but rose above them in a fashion that should be a lesson and inspiration to us all:

> Now has my valor borne me to the stars,
> and to the gods themselves.

To DAVE's family—his wife and children, his mother, and his brother and sisters—I extend my deepest sympathy in their great bereavement and express the hope that the fine monument of DAVE's life and works will comfort and sustain them in their hour of loss.

Who Has the Answers?

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. ULLMAN. Mr. Speaker, we all recognize the important role in our democracy which is played by the smaller local newspapers around the country. I think perhaps even more than the larger metropolitan newspapers, they reflect as well as influence public opinion. I want to call the attention of this body to the editorial comments of one of the many such fine newspapers in my own district on the administration's budget proposals for the coming year. These are the comments of the Record-Courier in my hometown of Baker, Oreg. They are, I believe, sound, commonsense comments

and I think we will all find them worth reading:

[From the Baker (Oreg.) Record-Courier of Jan. 21, 1960]

WHO HAS THE ANSWERS?

Citizens cannot be too reassured by the state of the Union talks by President Eisenhower to the Congress this week. For election-year consumption he combined platitudes with sheer demagogery and hypocrisy to come up with such headlines as "Ike Opens Inflation Battle" and "Budget Surplus, Tax Cut in Offing."

A balanced budget and tax cuts have been just around the corner for so long that Mr. Eisenhower can hardly be sincere in proclaiming that 1960 is the corner. Nor, with rampant inflation robbing the pockets of every American after his 7 years in the White House, can he be taken seriously for his Wednesday move to "rally the Nation to a new battle against inflation."

But for his political astuteness in appraising the balanced budget, cut in taxes and anti-inflation issues as the key to the 1960 aspirations of the American people there can be no doubt. His platitudes are well aimed.

This column year after year has pointed out that every time the administration slaps the country on the wrist with a scolding for its inflation tendencies, it is the signal for more inflation. The administration simply cannot stand before the American people with proof that it can scold big labor, big business, big finance into resisting the temptation to go hog wild. And his predictions for a hog-wild economy year of 1960 are but a horrible prospect for the evil fruits of this kind of a laissez faire I'll-turn-my-back type of government.

We look back on the administration's original position that only the removal of price controls was necessary to unleash the productive forces of this country which would voluntarily end scarcity and inflation for all time. Price control was completely eliminated and the forces of industry and business installed in the White House and in complete control of even Congress by the exercise of veto. The country has operated completely under their program for 7 years and it is brazen hypocrisy for the President to come out as he did Wednesday with another of his perennial headlines that he is combating inflation and that everyone-else-is-to-blame-but-me.

Surely Ike and NIXON must have their reason for insuring big industry, big labor and big finance a free access to boom pocketbooks, but surely they cannot be so naive as to believe it is in the name of a fight against inflation. The highway program alone is the greatest public spending spree in the history of the world, and added onto this is the fantastic project of spending $41 billion—over half of the national budget—on another scheme which outdoes the new deal except it is vitally important—the national defense budget for 1961. In any economist's language this is inflationary, and no annual slap on the wrist will stop the evil tide. The White House has turned its back. One of the issues of 1960 will be whether the next President will have both the desire and the courage to face the problem of inflation as a Government responsibility.

Yet the budget message was even more a political sleight of hand. Holding out tax cuts and a balanced budget in the headlines, he had the greatest expenditure in the history of the Nation and a fist full of higher taxes in the fine print, including permanent gas tax and postal cost increases. Eighty billion dollars in spending. And the headlines have the gall to say the President proposes cutbacks in spending—for resource conservation, and public welfare items, of course. And with deficits 5 of the 7 years he has been in office and after the whopping $12½ billion last year—the greatest since the war, he makes an election-year claim that he is the guardian of the balanced budget and debt reduction.

Don't think for a moment these are not big election-year issues. The opposition won't find it hard to talk about them either. But it may find it harder to outdo Mr. NIXON with the answers.

The Missile Gap

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following series of six articles on the subject of the missile gap written by Mr. Joseph Alsop, the articles having appeared in the Washington Post and Times Herald beginning on Monday, January 25, 1960, and the final article appeared in that newspaper on Saturday, January 30, 1960:

[From the Washington Post, Jan. 25, 1960]

THE MISSILE GAP: BASIC FACTS

(By Joseph Alsop)

A deeply disturbing conflict of the highest official opinion on the sole problem which literally involves the survival of the United States was unobtrusively revealed last week.

The problem of the missile gap was painted in the rosiest, most reassuring colors in congressional testimony by the able new Secretary of Defense, Thomas Gates, and the Chairman of the Joint Chiefs of Staff, Gen. Nathan Twining. General Twining even suggested that it was downright unpatriotic to regard the missile gap as constituting a problem.

Almost simultaneously, the same problem was painted in the most somber and alarming colors by the Strategic Air Commander, Gen. Thomas Power. Virtually no attention was given to the extraordinary speech, before the New York Economic Club, by the man who has more responsibility than anyone else for bridging the missile gap. Yet the message of SAC's brilliant leader was as grave as possible, as can be seen from the following excerpts:

"If [the Soviets] could effectively threaten us from a position of such military superiority that we would feel unable to defend ourselves, our capability to resist * * * would be greatly reduced, if not nullified. [Such] military superiority would be achieved through accumulation of [enough] ballistic missiles to destroy our retaliatory forces before they could be launched. Surprisingly, this would not take very many missiles under present conditions. * * * The total number of installations and facilities from which we can launch nuclear-armed aircraft or missiles at this moment is only about 100. All of these facilities present 'soft targets'—that is, they could suffer crippling damage even [from] a near miss.

"It would take an average of three missiles, in their current stage of development, to give an aggressor a mathematical probability of 95 percent that he can destroy one given soft target, from 5,000 miles away. This means that, with only some 300 ballistic missiles, the Soviets could virtually wipe out our entire nuclear strike capability within a span of 30 minutes. To further heighten this threat, only about half these missiles would have to be ICBM's. The rest could be the smaller intermediate range ballistic missiles."

These words, so terrible in their implications, as will be seen, were in the hands of the Pentagon censorship for no less than 3 weeks. During this interminable processing, General Power's speech was extensively pruned and toned down. If General Power's facts could have been attacked, the censors would surely have pruned them, too. Hence the foregoing must be accepted as the first authoritative statement, from a source commanding absolute belief, of the missile capability the Soviets now need to bring this country to its knees.

As might have been expected, General Power did not overtly challenge the views expressed by Secretary Gates and General Twining. But the challenge is plain enough and terrible enough, if you place General Power's statement of facts against its background of theory. The theory of deterrence, which gives the key to General Power's speech, is not merely accepted by General Power and Secretary Gates and General Twining. It is also accepted by Nikita S. Khrushchev, as he disclosed in the most significant passage of his recent speech to the Supreme Soviet.

In brief, true deterrence depends on careful calculations of "first-strike capability" and "counterstrike capability." The United States today, for instance, has enough nuclear striking power to destroy the Soviet Union 10 times over. But the Soviet Union today also has formidable nuclear striking power. The United States therefore has no "first-strike capability," if our first strike cannot take out all the pinpoint targets presented by the Soviet panoply of nuclear power. We have first of all to destroy this power before it gets off the ground. If we cannot do this, our first strike will merely trigger the Soviet "counterstrike capability." If we are thus faced with the prospect of national destruction by the enemy's counterstrike, we are effectively "deterred." Just this is our present situation, according to Khrushchev.

Furthermore, as General Power admitted, America's nuclear striking power, "though vast, is also very vulnerable to missile attack." This is because our power, mainly SAC, is concentrated in a few targets, lacks effective warning, and so on. For these reasons, a small number of Soviet missiles—General Power says 300—will be enough to wipe out virtually all our nuclear power before it can get off the ground. With these missiles in their armory, the Soviets will not need to fear our counterstrike; and our deterrent will then cease to deter.

This was, of course, the exact situation that General Power grimly described. It could be, he implied, the true American situation before very long. His description was so grim for two reasons: His frank admission of our deterrent's extreme vulnerability; and his startlingly low estimate of the number of missiles the Soviets would need to destroy our deterrent.

There is only one way to reconcile General Power's statement of the facts with the interpretation of the facts offered to Congress by Secretary Gates and General Twining. General Power obviously suspects that the Soviets may soon have the smaller number of operational missiles required to destroy our deterrent. But Secretary Gates and General Twining are convinced, as they have testified, that it is absolutely impossible for the Soviets to have this number of missiles within the period of our deterrent's vulnerability.

General Twining and Secretary Gates have derived this comforting conviction, as they have also testified, from the national intelligence estimates. Thus two questions immediately present themselves. Are the national estimates correct? And even if the

estimates are correct, is it permissible to gamble the whole national future on mere estimates? These questions will be examined in the next article of this series.

[From the Washington Post, Jan. 26, 1960]

THE MISSILE GAP: THE ESTIMATES

(By Joseph Alsop)

"With only some 300 ballistic missiles, the Soviets could virtually wipe out our entire nuclear strike capability within a span of 30 minutes. To further heighten this threat, only about half of these missiles would have to be ICBM's. The rest could be the small intermediate range ballistic missiles." (Speech last week by the U.S. strategic air commander, Gen. Thomas Power.)

This first authoritative statement of the missiles the Soviets need to destroy the American deterrent came straight from the man in charge of the deterrent. But almost simultaneously, Secretary of Defense Thomas Gates and the Chairman of the Joint Chiefs, Gen. Nathan Twining, were telling a congressional committee that we hardly need to worry about Soviet missiles, or about a missile gap.

Therefore Secretary Gates and General Twining plainly believe that the Soviets cannot possibly have or produce the missiles General Power says they need. The Secretary and the Chairman of the Joint Chiefs in fact place absolute confidence in the national intelligence estimates—the official guesses at Soviet military capability prepared by the Central Intelligence Agency in cooperation with the State Department and the armed services.

As survival quite literally depends on Secretary Gates being right, it is important to know whether his confidence in the estimates is well founded. The first thing to note is the extreme narrowness of the national estimates' margin of error, beyond which further error may mean national suicide.

According to General Power, the Soviets could destroy our deterrent with 150 intercontinental missiles, for our nuclear launching sites in this hemisphere, plus another 150 intermediate-range missiles, for our air and missile bases overseas. The national estimates themselves have long granted the Soviets an ample stock of IRBM's. Over 100 IRBM launching pads are known to exist in Eastern Europe alone. Thus everything hangs upon the single question, whether the Soviets now have, or will soon have, only 150 operational intercontinental missiles.

The number is not large. It is, for example, only 10 months of the productive capacity of our own Atlas ICBM plant, if the Atlas production line were working on a three-shift basis instead of a business-as-usual-basis. It is also less than the number of operational ICBM's we would now have in this country, if President Eisenhower had ordered an all-out missile effort after the warning of the first sputnik.

Again, 150 ICBM's is only three-fifths of the rockets that Nikita S. Khrushchev has said the Soviets produced last year in a single factory. From the context, he seemed to be talking about intercontinental rockets. He was hopefully interpreted here as talking only about IRBM's. At that, the interpretation is not overly comforting, for we have no factory today that is currently producing half Khrushchev's number of major rockets, even in the IRBM range.

Finally, and most important of all, 150 ICBM's is, or at least ought to be, a much smaller number of operational missiles by Soviet standards than by American standards. This is because of the lamentable difference in the histories of the Soviet and American missile programs.

In brief, there was no coherent, sensible American program of long-range missile development before 1954. Only in that year were practical recommendations for big missiles presented by the late Dr. John von Neumann, and rammed through the resisting Pentagon by the late Secretary of the Air Force Harold Talbott and former Assistant Secretary Trevor Gardner. This late start is the main reason why the first American ICBM, the Atlas, though operational and efficient, is basically an engineering hybrid.

The Soviet program of missile development, in contrast, began early, always had a high priority, and has been marked by methodical, orderly continuity. In the years after the war, before the United States had managed to build a single Chinese copy of the German V–2, the Soviets produced 1,000 V–2's in the captured underground V–2 plant in East Germany, just to get their hands in, so to say. Development thereafter proceeded by generations: the T–1, an improved V–2; the T–2, and IRBM prototype; the T–3A and T–3B, which are the present Soviet ICBM's; and the new, longer range Soviet missile tested in the Pacific which is the fourth generation.

If the United States had followed a similar development curve over a similar period of time, there can be no doubt at all that we would have, not a mere 150 ICBM's operational, but 1,500 ICBM's if the requirement were that big. Hence the published facts are dead against Secretary Gates. The problem remains whether the unpublished facts justify the Secretary's confidence that the Soviets certainly do not have what they most certainly ought to be able to have and must greatly want to have. This problem will be examined in the next report in this series.

[From the Washington Post, Jan. 27, 1960]

THE MISSILE GAP: OUR GAMBLE

(By Joseph Alsop)

The Eisenhower administration is gambling the national future on the assumption that the Soviets cannot possibly have a number of operational ICBM's equivalent to 10 months capacity output at our own Atlas missile plant.

The fact sounds incredible when stated in this blunt manner. It is a hard fact nonetheless. The man who should know best, the brilliant strategic air commander, Gen. Thomas Power, has flatly said that the Soviets can virtually wipe out our nuclear deterrent with no more than 150 intercontinental ballistic missiles, plus the IRBM's they already have in plenty. The Atlas plant has long been capable of turning out 15 ICBM's per month, if ordered into three-shift production.

Yet no serious emergency measures are being taken to forestall the "wiping out" of our nuclear deterrent, on which our national survival depends. According to Secretary of Defense Thomas Gates, such measures are not needed, because the national intelligence estimates do not give the Soviets even the very limited number of ICBM's that General Power says could win the war for the Kremlin.

There are several things to note about this gamble on the micrometric accuracy of the national intelligence estimates. In the first place, it is certainly not justified by the past record. This record shows a consistent series of gross American underestimates of Soviet weapons achievements from 1946 onward.

From the atom bomb, to the first Soviet jet engine for aircraft, to the the first Soviet long-range jet bombers, to the ICBM itself, the estimators went on making the same kind of error. On average, the Soviets were always expected to make each major advance a good 2 years later than the actual moment when the advance was made.

Once, and once only, there was an overestimate, of Soviet heavy bomber output. But this belated correction of previous mistakes about Soviet bomber capabilities was only an overestimate because of still another gross underestimate. At that time, the Soviet missile program was being all but ignored. The Soviet changeover from bombers to missiles was therefore wholly unforeseen.

In the second place, these persistent, often-repeated errors have clearly resulted from the very nature of the process by which the national intelligence estimates are still produced. The intelligence collector, the Central Intelligence Agency, does not produce the estimates. The CIA may do, and by every feasible test the CIA apparently does, a remarkable job of intelligence collection. But when data come in, say about the rate of Soviet missile tests, the CIA must go into committee with the armed services and the State Department. The committee decides the meaning of the newly collected data. The committee's interpretation of the data is the national estimate.

CIA Director Dulles, a devoted and exceptional public servant, has struggled to overcome the tendency to error in the estimates. But Dulles is not in the weapons-producing business, along with the armed services. He hardly has a more effective answer than this reporter had, long ago, when the late General Hoyt Vandenberg angrily insisted that the "Soviets could not possibly be producing more than six jet engines a month, and anyone who says different is a damn liar."

The former Chief of Air Staff was angry because six jet engines a month was the maximum output we had then attained in this country. The true Soviet output at that time is now well known to have been above 200 jet engines a month.

This in turn suggests the main source of error in the estimates. American experience is consistently used to measure current and future Soviet achievements. But the Soviet effort to develop new weapons has always been far more intensive than the American effort. In reality, the Soviet leadtime from drawing board to production line is commonly only half the American leadtime. So errors have obstinately recurred.

Sometimes, it must be added, the Pentagon majority really seems to prefer error to truth. For example, the late Deputy Secretary of Defense, Donald Quarles, represented the Pentagon majority when he did everything to obstruct the installation of the missile-watching radars in Turkey. When installed, these radars at once revealed the progress of the Soviet missile program; but even after this sharp lesson the radar evidence has often been pooh-poohed. For instance, former Secretary of Defense Charles Wilson publicly ridiculed the radars' proofs that the Soviets were testing their first ICBM's. Long thereafter, the Chairman of the Joint Chiefs of Staff, Gen. Nathan Twining, continued to insist that the Soviet ICBM's did not have true intercontinental range.

Such is the depressing background against which it is necessary to examine the detailed intelligence estimates which are the basis of the most hair-raising gamble a government has ever made. This analysis will be attempted in the next article in this series.

[From the Washington Post, Jan. 28, 1960]

MATTER OF FACT—THE MISSILE GAP: FISHY STUFF

(By Joseph Alsop)

The following article is the fourth in a series of six.

The American intelligence estimate prepared at the time of the first sputnik gave the Soviets about 500 intercontinental missiles by the end of this year. If these first estimates happened to be correct, the Kremlin may already have enough ICBM's to wipe out our nuclear deterrent.

During 1958, however, the first estimates were downgraded. New and lower estimates were conveniently revealed by former Secretary of Defense Neil McElroy, during his presentation of business-as-usual 1959 defense

budget. This second set of estimates gave the Kremlin 500 ICBM's by the end of 1961. If the revised estimates happened to be correct, the Kremlin should be in a position to win the world about 12 months from now.

During 1959, however, the revised estimates were revised yet again. The new and still lower estimates were conveniently revealed by Secretary of Defense Thomas Gates, during his presentation of the business-as-usual 1960 defense budget. If the twice downgraded estimates happen to be correct, we may perhaps bridge the missile gap without any final catastrophe—provided the Pentagon's highly optimistic schedules for the Minuteman missile and other weapons of the future also happen to be correct.

On the face of it, there is something very fishy about these repeated, strikingly convenient downgradings of intelligence estimates. How can anyone be so sure that Nikita S. Khrushchev was lying, in late 1958, when he stated that Soviet ICBM's were already "in serial production"? How can anyone prove that he was being deliberately misleading, more recently, when he seemed to say that a single Soviet factory had turned out 250 ICBM's last year?

If he was telling the truth, Khrushchev must now have at least 150 operational ICBM's. The highest American authority, the Strategic Air Commander, Gen. Thomas Power, has publicly said 150 ICBM's could virtually wipe out our nuclear deterrent. And the answer to the questions posed above is, quite simply, that no one in America can possibly be sure Khrushchev was not telling the truth, despite our downgraded estimates.

The proof of that statement lies not merely in the disturbing record of the estimates and the peculiar machinery that produces them, both of which have already been described in this series. In the evidence itself lies the best proof that the estimates are no more absolutely reliable than their name implies.

The gaps in our evidence on the Soviet ICBM program are quite certainly very great. We do not know whether the Soviets have one, or two, or three, or more ICBM plants comparable to our own Atlas plant, which could turn out 150 ICBM's in 10 months if ordered into three-shift production. We do not know whether crews have been diverted for ICBM's from the admittedly massive Soviet IRBM program. We do not know about launching pads, since even the doubly downgraded estimates suggested that the Soviet ICBM's are probably rail-mobile.

Such are the vast areas of ignorance, which unchallengeable authorities assert are concealed behind the national estimates. There are hints and indications, of course, to garnish the gap. But there is in fact only one main area of certainty. Our missile-watching radars have told us that the Soviets were not running great numbers of ICBM tests—only three per month until recently. We also have information about the Soviet testing facilities apparently confirming the information about the ICBM tests.

This limited Soviet program of ICBM tests has been almost the only excuse for twice downgrading the estimates. On this point, the Central Intelligence Agency, which is not in the missile business, is ill equipped to argue with the Pentagon, which is very much in the missile business. The Pentagon uses American test requirements as the yardstick—a highly dubious yardstick for many technical reasons. Insisting on this yardstick, the Pentagon has also insisted that the Soviets cannot be engaged in a crash program of ICBM output.

The words "crash program" are doubly revealing. They show first the deforming effect of budgetary pressures. A mere 10 months of capacity output by our own Atlas plant—the Kremlin requirement as stated by General Power—could not be called a "crash program" by anyone who had not lost his grip on reality.

Second, these words, "crash program," also imply a shocking fact that Secretary Gates has now publicly admitted. They show that our estimates are no longer calculations of Soviet "capabilities"—calculations of the utmost the Soviet can do, by a crash program for instance. They indicate that our estimates are now mere calculations of Soviet "intentions." Despite Secretary Gates' subsequent attempts to fuzz the whole thing over, his original testimony on this point was crystal clear:

"Figures (of Soviet ICBM output) that have been testified to in years past * * * were based on Soviet capabilities. This present one is an intelligence estimate of what we believe (the Soviet) will probably do, not what (the Soviets are) capable of doing."

Pearl Harbor was the result, the last time the American Government based its defense posture on what it believed a hostile power would probably do, and not on what the hostile power was capable of doing. If the estimates are wrong by no more than a hairsbreadth, something much worse than Pearl Harbor can now be the result.

In this matter, it is folly to blame the estimators, and above all the Central Intelligence Agency. The CIA has never claimed to provide gospel instead of estimates. It has done its best with a bad, difficult business. But those who have pressed for downgraded estimates, and have then used mere estimates as gospel, can certainly be blamed. These sponsors of our business-as-usual defense budgets, headed by the President, are playing a vast game of Russian roulette with the national future.

[From the Washington Post, Jan. 29, 1960]

THE MISSILE GAP: THE BRIDGE

(By Joseph Alsop)

The incredible thing about the official approach to the missile gap is the needlessness of the hair-raising risk that is being run. In order to save some hundreds of millions of dollars, the Eisenhower administration is literally playing a gigantic game of Russian roulette with the national future.

These are strong statements. They are also factual statements. Their coldly factual character is at once apparent, if you grasp why the American Strategic Air Commander, the man who knows most about the problem, Gen. Thomas Power, has now begun to talk about the Soviets' opportunity to wipe out our nuclear deterrent. The total vulnerability of the American deterrent is obviously General Power's first worry. Here and overseas, there are now about 100 missile bases and launching pads, from which we can send nuclear weapons against an enemy. All these bases and launching pads are soft targets. Soft, in Pentagonese, means capable of being utterly destroyed by the 5 pounds of blast pressure per square inch which is caused, over a 4-mile radius, by a 1 megaton bomb explosion.

According to General Power, three Soviet ballistic missiles will give the Kremlin a 95 percent chance of destroying any soft target. This is the basis of General Power's estimate of 300 Soviet missiles, half IRBM's, to wipe out the deterrent. As previously noted in this series, there is no doubt the Soviets already have the intermediate range missiles. They will also have the 150 ICBM's they require with the equivalent of 10 months of capacity production of our own Atlas missile plant.

The lack of any warning against missile attack is clearly General Power's second worry. At present, and until at least the end of 1961 SAC and all the West's other nuclear forces cannot count on any warning against surprise attack with missiles. True, an antimissile warning system is now being installed. But the eastern sector of this BMEWS system, as it is called, is only just coming into operation. The central sector is still far in the future. The western sector, which has to be based in Scotland, has not even been started. There will be no sure warning until the whole system is completed.

The combination of zero warning and total vulnerability in turn adds up in General Power's mind (and in any other mind capable of simple arithmetic) to the likelihood of the American deterrent being wiped out—if the Soviets just have or acquire the 150 ICBM's they need. Right here is where the game of Russian roulette begins.

After two budgetarily convenient downgradings, the national intelligence estimates do not credit the Soviets with those 150 ICBM's. One must pray the estimates are right. But no intelligence service on earth can be absolutely certain that the closed Soviet society, using all the resources of the huge Soviet economy, has not produced a number of weapons equal to a mere 10 months of capacity production in a single American factory.

There is at least one chance in six—the normal chance when juvenile delinquents play Russian roulette—that our intelligence estimates are wrong, some say it may be one chance in five, or maybe even one chance in four or three, or two. And if the estimates are wrong by a hair, our power to resist the Kremlin will be nullified, according to General Power.

The macabre roulette game is needless, however, because there are steps that can be taken to solve the problem of the American deterrent's total vulnerability and its total lack of warning. If we take those steps, the missile gap can probably be bridged. They are as follows:

A maximum airborne alert is the most obvious and urgent need. A plane that is already in the air, with bombs and fuel aboard, is not vulnerable to a one megaton explosion, or to a 100 megaton explosion. Before launching his own attack, the enemy must be ready to defend against all planes on airborne alert. Otherwise if there are enough such planes, a Soviet strike at us will invite the destruction of the Soviet Union.

At present the Strategic Air Command has a 15-minute ground alert, which is useless in conditions of zero warning. In the new budget, the administration has reluctantly tossed General Power some peanuts for airborne alert—$20 million this year, and $90 million next year. But this is the old trick of token appropriations to delude the Nation.

A maximum alert is needed, at least of General Power's big B–52 bombers, which are the only suitable planes he has. Even a maximum alert of 25 percent of his 600 or so B–52's will give him a dependable first strike of only 150 aircraft. Even after due allowance for the improvement in the bombs carried, a first strike by 150 aircraft is a melancholy contrast with the old SAC requirement for a first strike by about 1,500 aircraft. The contrast is all the more serious, because of the recent Soviet installation of a powerful air-defense system based on missiles like our Nike-Hercules. But the maximum airborne alert of the B–52's is the only remedy immediately available, and it is a good remedy, too. It would add about $900 million to the budget.

Better warning can be provided within 18 months, in all probability, by larger investment in the highly promising Midas missile-seeing satellite. Within 18 minutes warning from Midas, General Power could greatly increase the strength of his first strike. The Pentagon's kept scientists say that it is still a gamble to invest the extra $200 million needed to buy an operational Midas warning system immediately. But the Midas builders say it is a good gamble. It should be taken.

Later dangers can be reduced too, by buying more Atlas and Titan missiles for the perilous year, 1963. These late-coming mis-

siles will be in "hard" pads. Being hard targets, each of these American ICBM's will add something like 25 Soviet ICBM's to the Kremlin's missile requirement, at the very time when the Kremlin's missile program is quite sure to be in highest gear. An increased effort to close the far end of the gap in this manner might cost a little more than $1.5 billion.

These sums are not trifling. But surely it is not worth playing Russian roulette with the national future, to save a total amount no bigger than the invested capital of a single American charitable foundation.

[From the Washington Post, Jan. 30, 1960]

THE MISSILE GAP: THE KING'S CLOTHES

(By Joseph Alsop)

With any other President in the White House, the missile gap and the way it has been neglected and misrepresented by the administration would by now constitute a huge, emotion-charged national scandal.

But Dwight D. Eisenhower not only has the curious, often useful political knack of acting as a kind of supertranquilizer, a whole nation's Miltown. He is also, and with justice, remembered as the general who led our men to victory in the last war. Because he is a military hero, the country feels itself, "Ike knows best," while the Eisenhower Defense Department plays its macabre game of Russian roulette with the country's future.

In this way, Eisenhower the man is a key part of the problem of the missile gap. For this reason, no study of the problem can be complete without an attempt to answer the question, whether Ike really does know best.

It is a truism, of course, that military heroes cannot always and forever be trusted to know best. Indeed, the fields of history are whitened by the bones of armies that were prepared for the next war by generals who won the last war. But truisms need not be universally applicable; so one must look at Eisenhower's individual record in order to form a judgment.

In that record, the most significant single episode is surely the part President Eisenhower played in our most disastrous postwar defense budget. This was the budget prepared when President Truman was having his own bout of budget-mania, under the Defense Department leadership of the egregious Louis Johnson. This was the budget that invited the Korean aggression. As some predicted, its invitation was quickly accepted.

By Louis Johnson's request, Eisenhower came back to Washington that year, to work with the Joint Chiefs of Staff while the budget was being prepared. Without contradiction from Eisenhower, the budget was then presented to Congress by Johnson as an Eisenhower budget. Nor was Eisenhower the only great American military figure with a major share of responsibility for this budget that invited disaster.

A wholly different budget had been prepared, with infinite toil, by the great James V. Forrestal; and President Truman had made Gen. George C. Marshall the judge between Forrestal and himself. For the specific reason that the national economy could not support the Forrestal budget (which totaled $18 billion.) General Marshall told Truman to go ahead and cut Forrestal's handiwork to the bone. Gen. Omar C. Bradley also testified that if we spent a dollar more for defense than the Eisenhower-Johnson budget (which totaled $13 billion) the national economy would promptly collapse under the strain.

Here we see not just Eisenhower alone, but three of our greatest soldiers of the last war, all making the same appalling mistake for the same reason. It is the very reason that Eisenhower now puts forward, once again, to justify skimping the national defense in the current budget. Our generals, apparently, are taught to regard the economy of the richest Nation in history as a sort of sensitive plant, likely to fall into decline at the merest touch. In Eisenhower, of course, this viewpoint has more recently been vastly strengthened by the powerful influence of men like George M. Humphrey.

If you believe, with Humphrey, that paying the full bill for national defense is a quick road to national suicide it is of course tempting to avert the eyes from all the reasons why not paying the defense bill may be suicidal. There is evidence, too, that the President has done just this. If Eisenhower were a less transparently honest man, such Eisenhower defense speeches as the one after the first sputnik would have had to be called something far uglier than grossly misleading. The facts were wrong, and they were wrongly presented as well.

The chief fault lay, perhaps, in the White House staff's constant, sedulous effort to protect their chief from anything too disturbing or too disagreeable. One thinks of the former secretary of the National Security Council, Robert Cutler, the greatest of all the President-protectors, viciously ridiculing the awe-inspiring, wholly accurate warnings of the Gaither report.

One thinks, too, of the Pentagon warning to Gen. Andrew Goodpaster that the President had better not claim our Vanguard satellite would soon match the Soviet sputnik, because the Vanguard project was in a mess. The warning, overly calculated to upset the President, was never transmitted. The claim that we would match the sputnik was duly made. And for many months on end, the United States looked silly among its unsuccessful satellites.

This is no attempt to denigrate the President. It is an effort rather to show why, in this crucial case, a very virtuous king may be claiming to wear all sorts of clothes he has not got on. But perhaps it would have been better to assert, at the outset, that it is always wrong for any nation to trust any leader, instead of trusting the hard facts.

The hard facts say that a very small number of Soviet ICBM's can wipe out the American nuclear deterrent. The hard facts say there is a good chance of error in the intelligence estimates which deny the Soviets this small number of ICBM's. The hard facts say, therefore, that the remedies must be urgently applied that are needed to put an end to the Russian roulette game.

Admiral Rickover Meets the Press

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. HECHLER. Mr. Speaker, earlier at this session I commented on the outstanding contributions Vice Adm. Hyman G. Rickover is making toward a much-needed reevaluation of our educational system. And at that time I pointed out that, although Admiral Rickover is only a telephone call away from the President, Mr. Eisenhower and his staff apparently are so indifferent to the Nation's critical educational needs that they haven't even bothered to seek out Admiral Rickover's views.

This frightening indifference to the Nation's future was revealed during Admiral Rickover's recent appearance on NBC–TV's "Meet the Press." I ask unanimous consent to introduce into the RECORD the transcript of this provocative interview.

I would like to point out that Admiral Rickover underlines with crystal clarity that support of education is actually more important than some of the expenditures we are now making in the name of "national defense." Admiral Rickover very wisely concludes: "Education is more important because military developments are transitory. They change every year or so, but education is permanent. Unless we have a thoroughly educated citizenry, we will not be able to solve either our military problems or the many other problems that are facing this country. That is why I consider education of far greater importance than anything there is in this country, any problem we have."

The transcript follows:

"MEET THE PRESS"

Mr. BROOKS. Welcome once again to "Meet the Press." Our guest today is Vice Adm. Hyman Rickover, widely recognized as the father of the atomic Navy. His achievement in applying atomic energy to submarine propulsion is ranged as one of the greatest scientific contributions of our time. In 1958 Congress voted him a special gold medal. Last year he was assigned by President Eisenhower to accompany Vice President NIXON on his visit to the Soviet Union.

Admiral Rickover has aroused nationwide interest in his crusade for fundamental changes in our educational system. He believes that education holds the key to our survival. He has become one of the sharpest critics of the school system at all levels. He has made a deep impression on the country by his brilliance and his refusal to be diverted when he considers the goal important.

Admiral Rickover is making his first appearance today on a panel interview program.

Mr. SPIVAK. Admiral, some of your critics are saying "Admiral Rickover is a great engineer. Why doesn't he stick to engineering and leave education to the educators?" Will you tell us why you have taken so much of your valuable time to attack our educational system?

Admiral RICKOVER. You remember what Clemenceau said about war—it was too important to leave to the educators. The educators are public servants. As such they have every right to be criticized by any citizen in a democracy. When you cannot criticize your public servants, then you have the Russian system. Therefore, if we cannot criticize, we do not have democratic education.

Mr. SPIVAK. About 2 years ago in an article for This Week magazine you wrote:

"As a people we have been caught napping, but the launching of sputnik may well do for education what Pearl Harbor did for industry and the military." Would you say that the hope you expressed 2 years ago has been fulfilled?

Admiral RICKOVER. No, sir, it has not. There is some little activity going on; there is some lipservice being given to better education, but it is by fits and starts. Our people do not yet recognize how far we are falling behind.

Mr. SPIVAK. Arthur Flemming, Secretary of Health, Education, and Welfare, who certainly is in a position to know, or ought to be in a position to know, says "I do not agree with those who say we are behind Europe and Russia in education. Taking the educational system as a whole, we have the best there is anywhere at the present time." Upon what do you base your judgment?

Admiral RICKOVER. If that is the case, why then is he asking for more money for education—if we already have the best educational

system in the world? I base my estimate on the fact that the U.S. Office of Education has published examinations which are asked of about 1.6 million Russians at the age of 17, in mathematics, in physics, in chemistry, in history, in foreign languages, and so on. Very few of our high school graduates can pass that examination. When our children can pass an examination as severe as that—and that examination is not as severe as children in Western Europe can pass—then I will be satisfied with our school system.

Mr. RESTON. Is our trouble that we are lacking brains, or that we are not using the brains we have?

Admiral RICKOVER. We have plenty of brains in this country. We simply are not using them. The children in our schools are wasting their time on many subjects which have nothing to do with education whatsoever. Of course, this makes many jobs for guidance counselors, athletic coaches, school administrators, and so on, but it does not add to education.

Mr. RESTON. Admiral, it seems to me there is a paradox here. We may be behind in missiles, but in atomic submarines, for example, we apparently are leading the world. You managed to recruit an extraordinary group of people and bring them in. Why do we not do that in other forms, in other fields of endeavor in the country?

Admiral RICKOVER. I can't answer that; I can only tell you this. I did not recruit extraordinary people. I recruited people who had extraordinary potential and then I trained them. There are no good people waiting to be hired. All the good people already have good jobs and the only way you can do it is to get promising people and devote most of your time and energy to training them. I am sure if people who have charge of other projects will do that, they could have better luck too.

Mr. RESTON. What are you looking for, brains or character?

Admiral RICKOVER. I am looking for brains at the present time. You can't built submarines with character.

Mr. RESTON. You mean you can take a heel and if he is smart you can whip him around. You will take your chances on that?

Admiral RICKOVER. If he does a good design job, I don't care what else he does in his spare time.

Mr. ROBERTS. Starting with the fact that this country is in favor of general free public education for everybody, and recognizing that we don't all have the same amount of brains—you are the only one in the room who could do anything about this submarine; none of the rest of us could—is your quarrel with the total nature of our system, or only that it doesn't pull out of it the relatively small percentage of our people who can do these extraordinarily skillful jobs that seem to be needed to be done in this competition with the Communists?

Admiral RICKOVER. My objection is to the total system. I believe that many, many more of our youngsters can be trained to be good scientists, good engineers, good administrators, good musicians and good artists if we simply make the try. The U.S. Office of Education claims officially that 60 percent of our youngsters cannot be trained in the way I would wish. I think that many can. We simply are not trying hard enough. We give up too soon. This is my basic complaint against our education system.

Mr. ROBERTS. Now I understand from what you have been saying and writing, one of your proposals to solve this is to have much more Federal control. You have said there are too many school boards, and people on local school boards are not equipped to run education. Yet isn't this the basic objection of most Americans; they don't want an office of education to run the local schools. Isn't this the problem that you are up against?

Admiral RICKOVER. We don't have to run our schools federally, but we can set up Federal standards. Education has not been improved anywhere else in the world without first setting up standards. We have standards for railroad transportation; we have standards for airplane travel, for lipstick colors, for the size of socks, but we have no standard for education. We have standards for what goes into people's mouths, but we will not even permit permissive standards for what goes into their heads. I advocate that a Federal permissive standard be set up for what every boy or girl at age 18 should know. Then every parent can tell how well his children have done in school, how well the teachers are doing. Wherever this has been done, it has inevitably resulted in an upgrading of the school system.

Mr. LINDLEY. Although your work requires a high degree of specialization, you advocate a liberal education as the foundation of education in this country, and as you indicated a moment ago, you think with that type of education that many people who are not now considered good students could be driven or encouraged to enlarge their minds. How far would you carry that? How many years of general liberal education do you think every American should have?

Admiral RICKOVER. I thoroughly agree that the basic education should be liberal. In Western Europe at the age of 17 or 18 the boys and girls who go to the academic high schools have acquired a liberal education which is about the equivalent of what we get after 3 or 4 years of college. This I advocate for all of our children. I would let them go just as far as they could. If, after a while they were not able to assimilate it, they would have to get off into technical training. But first of all I would try as hard as I could to give every child in the United States a liberal education.

Mr. LINDLEY. Through high school?

Admiral RICKOVER. At least through high school.

Mr. LINDLEY. The Russian system recently was changed—at least a change was announced, I don't know whether it has been carried through—to make it more difficult to get into the university and, in effect, to require 2 years of work, or 2 or 3 years of work in the factory or in the fields after high school or the equivalent of high school. Do you think that is a good thing?

Admiral RICKOVER. In Russia only about 30 percent of the high school graduates can go to college. Therefore, they have far more people wanting to go to college than they can accommodate, so they can be choosey. I talked with Mr. Khrushchev on this very point. He said there were too many people who were just going to school for the sake of going to school, but they have not carried that thought into effect fully. The smart youngsters getting out of high school go directly to college. The others go to work for about 2 years and study at nighttime and then go on to college.

Mr. LINDLEY. Do you think that would be a good plan to adopt in this country?

Admiral RICKOVER. I personally do not believe in working after high school and before college. I think that the children should go on immediately after high school because the mind can grasp more, the younger the child is.

Mr. SPIVAK. I don't quite understand this. Do you think too few people are going on to higher education, or too many, or some of both?

Admiral RICKOVER. I think too many are going on into higher education in the United States who are not prepared for it. I think we could probably stand having more going on to higher education than we do now, but that they should be better prepared than they are at the present time.

Mr. SPIVAK. Admiral, you yourself are the product of our American school system. You went to Annapolis; you went to the public schools, here. They tell me that you have done pretty well. What is wrong with a school system that can produce someone like you?

Admiral RICKOVER. My education consists of the few technical things I learned at the Naval Academy plus about 40 years of study and reading and thought in science and literature and art and history and engineering. Those 40 years plus my public school education have made me what I am today.

Mr. SPIVAK. In short, you have found plenty of opportunity to educate yourself here if you have the desire to do so?

Admiral RICKOVER. Of course, anyone who has the desire to educate himself can do so. But most people are lazy; their children see that they are lazy, and the children follow the habits of the parents.

Mr. SPIVAK. How are you going to instill this desire? You say our educational system can take care of the people who want an education, because it certainly took care of you. You had a chance to study and gain what you wanted.

Admiral RICKOVER. Not through our educational system.

Mr. SPIVAK. You did it right here in this country though, didn't you?

Admiral RICKOVER. Yes, but not in the educational system. I did it in spite of our educational system.

Mr. SPIVAK. What major steps would you take. If you were a dictator of education, today, if you could change the system. What would be your first step; what would you go about doing?

Admiral RICKOVER. The first thing I would do is set up a standard, as I said before. You cannot get anywhere unless you have standards. For example, when we went to nuclear power in the Navy, we had to set up new standards for the welding of stainless steel and many other types of standards. We found unless we had those standards the shipyards and the factories could not do a good job. This is true everywhere in life. So, first, is the standard. Second, I would get better teachers. Third, I would knock off some of the administrators who are really running our schools. For example, in one State, 60 percent of the public school principals are ex-athletic coaches. People of that type should not be running our schools. In fact, the voice of education is not the voice of the teachers; it is the voice of the administrators. The teachers never get to talk. I get many letters from teachers who tell me about conditions in the schools, and they say, "Please don't use my name; I am afraid."

Mr. SPIVAK. You talk about standards, but we have standards, here. I mean a boy has to get certain grades; he has to pass certain subjects in order to get through Harvard or Yale or any college, so we do have standards. What do you mean by standards? You would set your own standards?

Admiral RICKOVER. I am talking mostly about the grammar schools and the high schools. The high school diploma in this country has very little meaning because the requirements are so different in various parts of the country. It merely means in general that the child has sat in school for 4 years. It does not have anywhere near the same meaning that it has in Western Europe.

Mr. RESTON. You said you talked to Mr. Khrushchev about this. Have you ever talked with the President about it?

Admiral RICKOVER. No, sir.

Mr. RESTON. He has never asked you to come and talk to him about it?

Admiral RICKOVER. No, sir.

Mr. RESTON. What about Mr. Flemming?

Admiral RICKOVER. No, sir.

Mr. RESTON. Anybody in the Government at all?

Admiral RICKOVER. No, sir.

Mr. RESTON. Mr. Brooks said you had made an enormous impression on this country with your agitation.

Admiral RICKOVER. Not on our Government, though.

Mr. RESTON. Why is that?

Admiral RICKOVER. You will have to ask our governmental leaders about that.

Mr. RESTON. Going back to what Mr. Spivak said earlier, you managed to do all right. What about the responsibility of the home in all this?

Admiral RICKOVER. I believe that if the parents did their job, we could have much better educated children. It has been found out after considerable research that how children do in school, not only here but even in Russia, is based on the influence of the home. If the home is a place where there are simply good surroundings, where the children simply get good clothes and lots of entertainment and there is no intellectual discussion in the home, that has quite an effect on the children. You will find many studies show that the parents are the greatest influence in how well their children do. Until and unless the parents recognize that if they decide to bring children forth into this world, they have a deep responsibility to look out for their posterity. Until they decide that, until they understand that that is their most important function in life, we will not have better schools. Today the parents are mostly satisfied with having a good time, and with looking out for things that are not concerned with the intellect of their children.

Mr. RESTON. What do you do about the kids that come out of good homes and where there is agitation for standards of excellence in the family, intellectually, and who go to good universities, and then they use this excellence in very secondary endeavors, whereas in Russia, which you are always quoting, they direct their brains to the place where the state needs those brains the most. What do you about this problem?

Admiral RICKOVER. We can do the same thing here without state compulsion, if our values were not such that we gave material possession such a high place in our scheme of things—if we were taught now that this is really an affluent society where everybody really has enough to get along on, that there are many other things in life besides possessions, filling our homes with new things. Every day the nursery rhymes on TV and radio urge us to buy new things. If we would learn that these things are thrown in the ashcan in a couple of years but what you put in a child's mind stays there forever, if we realize that the intellectual life, the life of the mind, is just as important as getting money and material things, I believe many of these youngsters would go on to do intellectual endeavors.

Mr. RESTON. What you are talking about now is the whole philosophy of the country?

Admiral RICKOVER. Yes, sir.

Mr. RESTON. The sense of values of the country, not the educational system? Is this the heart of the problem?

Admiral RICKOVER. The education of our country is a part of the sum total. You can't divorce the educational system from the country, nor can you divorce the responsibility of all the people from our educational troubles. You can't blame one group of society. It is our collective fault.

Mr. ROBERTS. I'd like to ask you about one proposal you have made specifically, if I understand it correctly, and that is the idea of doing something more for the so-called bright kids in our schools, who, if I understand your criticism and that of others, have been often lost by making schools the lowest common denominator. The bright kid is lost in the mass. Am I right that you want to have a separate school system for the brighter kids, or how would you pull that boy or girl up above the level of the mass of the kids?

Admiral RICKOVER. I believe that every child in this country no matter where he comes from, what the financial status of his parents is, what his social status is, should have an equal opportunity to develop himself to the maximum. I would give Federal aid to education as is necessary to accomplish this. I would not stop any youngster who is brilliant. I would not have him held back by anyone else. I would let each child proceed at his maximum. I would not have separate schools, necessarily. You could have it in separate parts of the same school, but I would group children, after about 10 or 11 years of age, in accordance with their abilities, so that every child in every school is working as hard as he can. If you put the bright youngster in with the dullard, the bright one becomes lazy and becomes troublesome. The dullard becomes dissatisfied because he reaches an inferiority complex. So I would separate them so that each one is doing the best he can.

Mr. ROBERTS. Are you in favor of a strictly limited kind of education? You have criticized so-called frills or trivia in education. Do you think we ought to get rid of all sports that we have in our school system, high school football and that sort of thing, and stick to the classroom? Is that what you are talking about?

Admiral RICKOVER. I would stick to the classroom with the exception of physical education. Physical education is essential, but many of the organized sports are done more for the entertainment of the parents than it is for the children themselves. It also is done to a great extent to make jobs for various people. The school is not the place for this. The school is tax supported. There is a distinction between training and education. Education can be done best in the school. Training should be done by the home, by the church and by the community. And when we try in a 180-day school year, 5 hours a day, to do everything in a school, we accomplish nothing well. I would use the school to train the intellect.

Mr. LINDLEY. I wonder if we might turn to atomic development for a moment. You have seen at first hand—at least parts—of the Russian atomic program, and you know what we are doing. Are they ahead of us in any significant phase of atomic development, either peaceful or for military purposes?

Admiral RICKOVER. I can only talk about the subject with which I am familiar. That is atomic submarines, and the peaceful applications of atomic power. I do not believe they are ahead of us in atomic submarines. I do not know of any atomic submarine they have. I am sure with the Russian tendency to boast about what they have done, if they did have an atomic submarine at the present time we would know about it.

As far as the peaceful uses of atomic energy are concerned, I do not think they are in advance of us. We haven't gotten very far either, but I don't think they have gotten as far as we have.

Mr. LINDLEY. Could you make an estimate today as to when atomic power will become competitive economically with other sources of power?

Admiral RICKOVER. It is foolhardy to say what will happen in the next year or so, but I confidentially predict that it will not be economically competitive for at least 10 years, perhaps 20.

Mr. LINDLEY. You would agree, I suppose, that the Russians are ahead of us in space—at least they have been able to put larger objects into space. Have you any recommendation as to what we might do with our space program in order to overcome this handicap?

Admiral RICKOVER. I can only talk in generalities. I think our governmental operations could be very much streamlined so that the people who are trying to do a job are not interfered with as much as they are, with reports, committees, memorandums, and so on. For example, my own time is taken up about 75 percent with writing reports. The other day I told one man who asked me to write a report that I could either give his this report or build a submarine; which did he choose? I believe I will probably have to write the report.

Mr. LINDLEY. Was he in the executive branch or the Congress?

Admiral RICKOVER. The executive branch, not Congress.

Mr. SPIVAK. Admiral, do you think we are in a life-and-death struggle with the Soviet Union?

Admiral RICKOVER. Why, of course, we are.

Mr. SPIVAK. And do you think education of military defense is more important in that life-and-death struggle at the present time?

Admiral RICKOVER. Education is more important because military developments are transitory. They change every year or so, but education is permanent. Unless we have a thoroughly educated citizenry, we will not be able to solve either our military problems or the many other problems that are facing this country. This is why I consider education of far greater importance than anything there is in this country, any problem we have.

Mr. SPIVAK. If we did everything you wanted us to do, it would take years before we began getting results of your plans for education, wouldn't it?

Admiral RICKOVER. But the sooner we start, the quicker we will catch up.

Mr. RESTON. You are not suggesting, are you, that there might be some waste in the Pentagon that might be applied to education, are you?

Admiral RICKOVER. I know that if we cut the people in the Pentagon by about 20 to 30 percent a lot of the work would go on much quicker than it does now.

Mr. RESTON. You mean if we cut them we could both improve the Pentagon and education?

Admiral RICKOVER. Yes, sir.

Mr. ROBERTS. Are you satisfied with the number of Polaris nuclear submarines the Government is producing now?

Admiral RICKOVER. No. We should have more.

The Late Honorable John J. O'Connor

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. KEOGH. Mr. Speaker, among his host of friends, many Members of the House were grieved to learn of the death of John J. O'Connor, of New York. John O'Connor, with whom I had the privilege of serving during the 75th Congress, was first elected to the House in November 1923 to fill the vacancy caused by the death of another great statesman, W. Bourke Cochran; and he served continuously and with distinction from November 1923 until January 3, 1939.

As chairman of the House Committee on Rules, he demonstrated to a marked degree his unusual competence as a legislator and parliamentarian. A statesman in the true sense of the word, John O'Connor stood fast to his principles of representative government even

thought it were to cost him his reelection.

His early training in the law equipped him well for his future career in government and as an active practitioner. He was admitted to the bar of Massachusetts before his graduating from Harvard Law School in 1911 and shortly afterward, moved to New York where he soon commenced the practice of law and entered political life. Before becoming a member of the New York State Assembly in 1920, he served as secretary to the Democratic members of the New York State Constitutional Convention in 1915—a post that undoubtedly whetted his appetite for constitutional and legislative problems.

As a member of the New York Assembly he served as vice chairman of the Legislative Committee on the Exploitation of Immigrants in 1922 and 1923. He was also a member of the Committee on the Revision of the Corporation Laws of New York, and was legislative secretary for the Child Welfare Commission.

An active Democrat for many years, John O'Connor was a delegate to every State and county convention in New York for 20 years, as well as delegate at large to the Democratic National Convention in Philadelphia in 1936.

After leaving Congress in 1939, John O'Connor devoted his talents and energy to the practice of the law and earned an enviable reputation as a trial lawyer, particularly in the important field of maritime law.

John Q'Connor survived his wife who passed away in 1952. We extend our sincere condolences to his four distinguished sons who have followed his footsteps in professional pursuits of law, medicine and education; also to his two lawyer brothers, Basil and James O'Connor as well as his sister Miss Mary O'Connor.

The legal profession, the science of government and countless persons in all walks of life have lost a good friend.

Polluted Water, Undiluted Gall

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the San Francisco (Calif.) Chronicle of November 23, 1959.

The editorial follows:

POLLUTED WATER, UNDILUTED GALL

For undiluted arrogance and contempt of public welfare we can recall few acts and pronouncements more notable than those of the Bayshore Sanitation District.

Before a hearing of the Regional Water Pollution Control Board, its spokesman and general counsel conceded last week that the district has created an intolerable situation and announced that it will persist in doing so. Under discussion was the open ditch through which the district leads household and industrial sewage up to the Bayshore Freeway and thence into San Francisco Bay.

The misnamed sanitation district thereby not only affronts the public eye and nose and pollutes bay waters to the detriment of marine life and human recreation, but in the opinion of the control board maintains a health hazard of especial concern to many thousands of motorists who travel the freeway daily.

In an attempt to end this multiple nuisance, the control board months ago formulated regulations that would require treatment of the district's sewage. The district responded with what members of the board's staff regard as dilatory and evasive tactics. Meanwhile, public outcry against the so-called big stink, to which the district largely contributes, led to erection of a dike as a preventive measure. The dike, by changing physical conditions in the area, made the control board's regulations inapplicable, according to legal authority, and thus gave the district a reprieve.

New regulations are in the making—but the district meanwhile has devised a plan by which, its spokesmen indicate, it hopes to circumvent the board's jurisdiction. It proposes to construct a dam across its open sewer at a point just west of the freeway, thereby cutting off the remainder from the bay and taking it supposedly out of board control.

But board members assert that this proposal would lead to a dangerous aggravation of the already intolerable situation. It would have the effect of making a settling basin out of the open sewer and increasing the present outrage to public health and welfare. Further, they argue, it would defeat its evasive purpose because the dammed ditch could not possibly hold back the combined volume of sewage and runoff during rainy periods and would continue to pollute the bay with its overflow.

Plainly, the control board is powerless to act at this time, while its new regulations are in the making. Perhaps it may still be powerless when the dam is in place. But the Bayshore Sanitary District is not therefore free to befoul the air and endanger health. Its present operations are clearly a nuisance and may constitute a health hazard. Unless it voluntarily changes its attitude and radically alters its ways, outraged public opinion will compel it to do so.

The Crisis of the Commuter Railroads: No. 3

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. IRWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include therein an article which appeared in the New York Times by Clayton Knowles which skillfully analyzes the woeful situation on the commuter railroads.

In this third of a series of insertions I am offering, we see what happens when railroads try to skimp on maintenance and we also see what can be done through Government help to provide good, safe commuter service while aiding cities to cope with increasingly serious highway traffic problems.

The article follows:

BLEAK YEAR ON THE RAILS—NEW HAVEN'S ULTIMATUM POINTS OUT THE DIM PROSPECT FOR COMMUTING

(By Clayton Knowles)

The year 1960 looks bleak for the railroad commuter in the metropolitan region. He does not need a crystal ball to see that, bad as commuting may seem today, it will probably get worse.

Higher fares, further attrition of services and, in some cases, discontinuance of passenger operations are in prospect. The ultimatum from the New York, New Haven and Hartford Railroad Tuesday on fares and subsidies revealed nothing new. Yet, stripped of Madison Avenue touches such as "The countdown has begun," the statement underscored a situation daily becoming more obvious.

The fact is that the only road whose service is not contracting and deteriorating is the Long Island Rail Road, which operates with substantial Government help.

State, county, and local governments agreed to abate half of the road's taxes to get the Long Island, which had been bankrupt, back on its feet. As part of the arrangement, the parent Pennsylvania Railroad waived all interest on its investment.

COULD RAISE FARES

And further, the Long Island was empowered to raise fares and arrange schedules to suit requirements, subject only to later scrutiny by the Public Service Commission. This 12-year relief package is now in its 6th year.

The railroad is providing good, clean, fast, reliable service, but there is no indication that it can be maintained without the aid arrangement.

Two points in the Long Island story form a lesson for the 225,000 who commute to work by rail from Long Island, the Hudson Valley, New Jersey, and Connecticut.

First, nothing was done about the railroad's plight until 2 horrible accidents—1 took 31 lives and the other 79—in 1950. The accidents pointed up the invitation that operating in the red may extend; try to save on maintenance.

Secondly, the State and three of its biggest units of local government, New York City and Nassau and Suffolk Counties, had to team up to produce a solution. This emphasizes that the impact of a breakdown in rail commuter facilities is regional, not isolated.

THERE IS NO MECHANISM

Even a full appreciation of implications of the story, does not ease the search for a means to save the disintegrating regional rail network. The said fact is that there is no mechanism, existing or in prospect, to get the necessary interstate cooperation.

The leadership has been lacking. The Federal Government has no rounded transportation policy for metropolitan areas despite the increasing urbanization in the Nation. There are billions for highways that glut cities with automobiles; subsidies for air, sea and open road. But there is little for commuter railroads except an easier means to withdraw completely from commuter operation when deficits pile high.

If this situation proceeded to its ultimate, Manhattan could not possibly accommodate all the buses and automobiles needed to bring the commuting public to work if the railroads collapsed. Main arteries leading into the city would be clogged far out into the suburbs.

A single lane of rail can handle 48,000 commuters an hour, compared with 6,720 by bus and 2,250 by automobile on a single expressway lane.

ONE PLAN FAILED

The Metropolitan Rapid Transit Commission's proposal for a New York-New Jersey

transit district failed in good part because it omitted Connecticut and because it was, many said, politically unrealistic.

Governor Rockefeller moved forcefully on the problem during his first few months in office. The Democratic Governors of New Jersey and Connecticut seemed ready to cooperate. But when they got down to cases, the community interest was not controlling. Action, such as it was, stopped at State lines.

The Rockefeller program provided the means for roads operating within the State to get new cars under a State-aided easy payment plan, and to get a substantial degree of tax abatement. The New Haven's situation now indicates this is not enough for an interstate carrier.

George Alpert, New Haven president, says he needs $8,400,000 more a year to continue commuter service. Under the Rockefeller plan, the line's tax abatement for 1959 came to $112,500. It will be $464,000 in 1960, and $943,000 in 1961, and $1,422,000 in 1962, when the program reaches its peak.

RIBICOFF CITES LIGHT TAX

In Connecticut, Governor Ribicoff said that the railroad was very lightly taxed and that subsidies were barred under the State constitution. He has said, in effect, that Connecticut's 24,000 rail commuters are a small part of the total for the region and thus the State's involvement is slight. The State now is investigating the New Haven.

Governor Meyner, of New Jersey, sought to tap surpluses of the Turnpike Authority to assist the Lackawanna, the Jersey Central, and other commuter lines. His proposal, accepting the total transport concept, would have pooled on a limited basis transportation surpluses, for the benefit of all.

The proposal met a crushing defeat in referendum last November. The Turnpike Authority's surplus for 1959 is expected to total $17 million.

The Port of New York Authority, acting only for New York and New Jersey, has stubbornly resisted involvement in the region's commuter rail problems despite the fact that many think its charter calls for is to act. And each year the authority builds new, subsidized facilities to compete with the railroads.

The prospect is bleak.

Is Uncle Sam Insolvent?

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Economic News for November 1959, entitled "Is Uncle Sam Insolvent?"

This article was sent to me by one of my constituents, a Dr. James Barnabee, with the request that it be inserted in the RECORD so that Members of Congress could digest its contents. Dr. Barnabee was of the opinion that it was interesting and timely, and I commend it to my colleagues:

IS UNCLE SAM INSOLVENT?

Will the U.S. Treasury soon be unable to pay its debts? Insolvency, or inability to pay one's debts, usually is the prelude to bankruptcy proceedings. That anyone should seriously question whether Uncle Sam is nearly bankrupt may seem silly to many readers, but consideration of the facts in the case inclines us to believe that the question is far more serious than silly.

Heretofore many well-informed observers have concluded that the U.S. Treasury simply cannot become insolvent. Those who entertain this view argue that, no matter how much the Treasury may owe, and no matter how much may be falling due at any particular time, the Treasury always can manage to pay its debts. How is that possible? By the simple expedient of stuffing Government securities into the commercial banks, the Treasury can obtain credits to its checking accounts and thus pay maturing obligations.

Students of money-credit matters long have understood that the process of monetizing Government debt via the banking system is the same, in underlying principle, as running the printing presses to print paper currency with which to repay maturing obligations. In other words, monetizing Government debt is inflationary precisely as is the printing of paper currency, although the inflationary aspect of the former is not so widely understood as is the latter.

Nevertheless, the U.S. Government can monetize its debt; in fact, it has been doing so in some degree for many years. Therefore, insofar as is domestic creditors are concerned, any question of insolvency is indeed silly. By statute, citizens can be forced to take whatever the Government chooses to pay them in settlement of its debts, either newly issued paper currency or newly created checking accounts that represent the monetization of Government debt. Therefore, the Government need not become insolvent with reference to its domestic debts.

Nevertheless, in asking whether or not Uncle Sam is insolvent, we raise not a silly question but one of immediate practical concern. Those who are smugly complacent about Uncle Sam's ability to meet his financial obligations when they fall due overlook one important fact: their spendthrift Uncle has been incurring debts not only to American citizens but also to foreign governments, their citizens, and international institutions. These latter holders of claims against the Treasury cannot be treated as American citizens can be treated; the foreign creditors are entitled to real dollars on demand. As holders of claims on dollars (which by statute are one thirty-fifth of an ounce of gold), whether in the form of deposits in U.S. banks or U.S. short-term securities, the foreign creditors can and often do demand payment in real dollars rather than in the paper claims on dollars that U.S. citizens are forced to accept. (Read the fine print on the $10 or $20 bill in your wallet.) If and when Uncle Sam is unable to meet those demands, he will be insolvent and on the road to bankruptcy regardless of the comforting delusions entertained by so many U.S. citizens.

What then, is the actual situation? On chart I, below, we show two lines. One represents the total U.S. gold reserves held by the U.S. Treasury. The other shows the rapidly mounting total of foreign demand and potential demand claims against that gold. Obviously, the Treasury will be unable to pay all its foreign creditors if the trends shown continue for a few more months and those creditors demand payment.

In short, the U.S. Treasury stands today on the brink of insolvency. Failure to remedy the situation soon may result in the supposed tower of financial strength for the free world becoming simply another bankrupt nation, bankrupt by an almost incredible succession of economic and financial follies.

Before considering the unwise policies that have resulted in the present situation, further brief comment is advisable. In order to understand the full extent of the present financial difficulties, readers should realize that much of the gold held by the Treasury is needed for domestic purposes. The statutory reserves of the Nation's commercial banking system require nearly $11 billion in gold today. In chart II we show two curves. The first is the required gold reserves of the Nation's commercial banks. The second is the net Treasury holding of gold after deducting potential foreign demand claims. Thus viewed, the Treasury's net gold holdings have been below the statutory level for their domestic function since 1952 and now are but a small fraction of the amount required.

Of course, as some economists already have pointed out, statutory gold reserves can be altered by an act of Congress. The present legal level of gold reserves for the Federal Reserve banks was reduced to 25 percent from 40 percent in order that the Federal Reserve System might aid Treasury financing (monetization of U.S. debt) during World War II. What Congress has done once can be done again. Instead of 25 percent, the statutory level can be made 10 percent, or 5 percent, or a fraction of 1 percent, or even zero. However, what would be the reaction of the American public to such action?

The Treasury, for the maintenance of domestic solvency, is dependent upon the frequent periodic refinancing of huge amounts of maturing debt. Who would buy these Treasury obligations if confidence in the Nation's money were badly shaken? Consider the situation today with $140 billion of paper and credit purchasing media (currency and demand deposits) pyramided on the slender foundation of only $3 billion gold (after allowing for net foreign claims). If and when most of that gold has gone, is there any reason to believe that confidence in the stability of American currency or other claims on dollars will remain?

At this stage of the discussion readers may well wonder why foreign creditors are willing to continue to trust a debtor so nearly insolvent as is Uncle Sam. Why don't they demand the gold on which they hold claims before the debtor defaults and, by an embargo on gold or in some other way (including perhaps another devaluation), prevents them from obtaining the gold that is rightfully theirs?

First, foreign creditors recently have been taking their gold. In 1958 they took $2,275,100,000 (net) in gold, and $1,013,000,000 was taken in 1959 to the end of August. Chart III shows the accumulation of foreign claims in recent years less offsetting U.S. claims on foreigners. Also shown is the portion of such foreign claims for which gold has been demanded. Obviously, foreign creditors to an increasing extent have been demanding gold.

Second, as long as the United States persists in its delusions of economic grandeur, it presumably will continue the lavish giving and lending abroad. Moreover, when American businesses under the stimulus of prolonged inflation price their products out of world markets, foreign businesses benefit. A typical foreign viewpoint may well be, why shoot the American Santa Claus; how much more sensible it is from a foreign point of view, to encourage Uncle Sam's profligacy as long as possible. Presumably, exposure of U.S. near-insolvency would mark the end of lavish foreign gifts and loans, perforce, even if not by the ultimate triumph of commonsense.

Third, we assume that at the meeting of central bankers in London last spring Mr. Martin, Chairman of the Federal Reserve Board, gave the strongest possible assurances that the United States proposed to correct the situation by drastically higher money rates and some deflation if necessary. We believe that without such assurances the demands for gold would have been greater in recent months. Moreover, unless some deflation soon occurs we expect the demands of

foreign creditors for gold to increase greatly in the not far distant future. We do not see how they can observe without concern for the safety of their claims the further accumulation of foreign claims on U.S. gold to the point where actual insolvency may result. That point, as chart I shows, is not far distant.

Turning now to the Government policies of recent years that account for the present precarious financial position of the United States, we shall be repeating to some extent comments in earlier issues of Economic News. However, the situation is of such vital importance to every American citizen that some repetition is warranted.

Without doubt, the most influential single factor has been inflation: one aspect was the great monetization of U.S. debt during World War II; and another aspect has been the monetization of much private noncommercial debt since World War II. The details of this procedure will be discussed in a subsequent issue of Economic News.

Also contributing to the difficulties now confronting the Nation have been the farm policies that, while encouraging surpluses at home, have discouraged sales abroad by artificially high prices. Similarly stupid have been the purchases of huge quantities of basic commodities theoretically for defense stockpiles but too often without regard for the changing needs of national defense. Not only has the Government been burdened with the costs of buying and storing things not needed, but also, as has been the situation for many agricultural products, the higher prices fostered in the United States have ruined export markets.

Made possible by the great and prolonged inflation have been round after round of wage increases in major industries where the organized minority of labor has enjoyed monopoly or near-monopoly privileges. Such wage increases have far more than absorbed the differential between costs of efficient production for American mass markets and the less efficient production for smaller markets abroad. These and other costs increases, such as the cost of "featherbedding" for example, to an increasing extent have priced American goods out of foreign markets and even have priced some American goods out of domestic markets with a resulting encouragement of imports from abroad.

CONCLUSIONS

We may summarize as follows:

(a) From a position of relatively great strength after World War II the Nation's money-credit system has deteriorated under the influence of continued inflating at home and lavish giving and lending to nations abroad.

(b) Apparently, before long the vast superstructure of inflationary debt and credit will rest on a gold base none of which will be free of foreign demand claims.

(c) What will happen if foreign claimants choose to demand their gold? The U.S. Treasury finally may refuse to honor foreign claims on U.S. gold. If and when that time comes, the dollar will depreciate in foreign markets. What will U.S. citizens do then; will they rush to convert dollar claims and fixed dollar investments into stocks, real estate, etc.; or will U.S. citizens ignore a flight from the dollar abroad? No one knows.

Or the U.S. Treasury may honor all foreign claims until the Nation's gold reserves are exhausted. How will U.S. citizens react to that situation, especially to the deflation that will occur unless purchasing media retired when gold is claimed are replaced by other newly created purchasing media? Will U.S. citizens fearing deflation rush to sell stocks and other equities in order to hoard currency and accumulate idle checking accounts or perhaps invest in bonds; or, especially if new purchasing media are created by monetizing more Government debt, will U.S. citizens fearing more inflation rush to buy stocks, etc.? Again, the only truthful answer is, no one knows.

However, we do know this: If Russia had been able to plant its agents, unknown Alger Hisses and Harry Dexter Whites, in key positions of the U.S. Government with instructions to carry out Lenin's plan for destruction of a capitalistic economy by means of inflating, they hardly could have accomplished a more thorough job of "gutting" the economy by extracting its basic gold reserves. With incredible folly, presumably honorable and sincere men in positions of authority have accomplished in a decade what Harry Dexter White apparently sought to accomplish when he arranged for Russia to have the plates from which we had printed our occupation currency during World War II. Thus has arisen the possibility, which need never have been permitted to exist, of a "run" on the dollar.

In the light of the foregoing, we hope that readers will understand why Secretary of the Treasury Robert Anderson is seriously concerned about the Nation's financial plight. Obviously, inflation must end and some deflation must occur or the United States soon will be a bankrupt profligate instead of a tower of financial strength for the free world.

The Balance-of-Payments Problem

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by John J. McCloy, chairman of the board of directors of the Chase Manhattan Bank, given at the annual dinner of the Investment Association of New York on December 15, 1959:

THE BALANCE-OF-PAYMENTS PROBLEM

(By John J. McCloy)

I would like to say something about a subject which is preoccupying many minds at present—our balance-of-payments problem. There have been a number of speeches and comments on this subject, particularly since the Monetary Fund and World Bank meetings held this fall in Washington, but I am so concerned with the prominence which seems to have been given to this single factor as an influence on our foreign and defense policy that I am impelled to talk about it a little tonight.

Certainly it is well for those as knowledgeable as you are to examine this situation, if for no other reason than to appraise its true relation to our vital interests. In spite of the publicity it has received I suspect that the problem is still very little understood and, misunderstood, it has some very dangerous aspects. For a nation's balance of payments mirrors its many basic trends and policies.

In our case the deficit has been seized upon by anyone who has a particular devil to exorcise. Those who would withdraw our defenses from NATO, those who would do away with foreign aid, those who would seek a return to protectionism, those who would like to return to that misnomer of "fortress America"—all have been using our imbalance of international payments as an argument for their cause.

Actually, the basic elements of the problem are not overly complex. For some years now (ever since 1950) the United States has been spending more dollars abroad than other countries have chosen to spend here in the United States. In that sense our international payments have long been out of balance. But up until 1958 the imbalance was not great—it averaged about $1 billion a year—and for the free world this was healthy. You all remember the talk not too long ago of the dollar shortage. That talk had a real basis in fact.

There was a dollar shortage throughout the world, and by running an imbalance in its payments with other countries the United States made it possible for the rest of the world (and particularly Western Europe) to rebuild its foreign exchange reserves of gold and dollars. World trade and production could not have increased as it did without this. I might add, too, that dollars have been regarded as good as gold—a very important fact, since there is not enough gold in all the treasuries of the world to meet the full needs for international reserves.

IMBALANCE INCREASES

But in 1958 some very important changes began to take place. With the onset of a world recession, minor though it proved to be, the imbalance in our foreign payments suddenly increased, and very markedly so. In 1958 it amounted to $3.4 billion; moreover, this imbalance was accompanied by a sizable outflow of gold—$2.3 billion, to be exact. Likewise, a substantial imbalance has continued throughout 1959, when the total may amount to as much as $4 billion.

I should add, however, that the outflow of gold this year has been reduced to approximately $1 billion, in part because high interest rates in the United States have encouraged foreigners to keep the dollars they accumulate invested here.

BANKER TO THE WORLD

Now I think I ought to emphasize that sizeable deficits in our balance of payments—even deficits of $3 billion to $4 billion annually—do not place the United States in any immediate tight spot. There is no question about the internal strength of our economy—it is stronger than ever. And to meet any external drain we still have the largest gold reserve in the world, some $19½ billion, almost half the total monetary gold held by all nations.

But the United States has also become the world's leading banker. Central banks alone hold reserves in the form of dollar deposits or short-term investments of more than $9 billion in the United States. And if we add the dollar deposits and short-term investments of other foreign entities (individuals, corporations, and banks), the total comes to about $19 billion. So, like any banker, we have many claims against our assets, and it is vitally important that our creditors continue to retain complete confidence in us.

The plain fact is that a balance-of-payments deficit of $3 to $4 billion yearly, if allowed to persist, is too much. It increases the claims against the United States at too rapid a rate, and it causes our creditors justifiably to take a close look at how we are managing things.

Well, how are we managing things? Why have we had this sudden increase in the imbalance of our foreign payments? The immediate cause is not hard to discern. After 1957 the United States experienced a decline in its exports and an increase in its imports. In 1957 our exports amounted to more than $19 billion, and our imports were about $13 billion. We had a favorable balance on trade alone of $6 billion. Admittedly that was a peak year—influenced among other things by the Suez crisis.

BALANCE STILL FAVORABLE

Nevertheless, it looks as though our exports in 1959 may not run to more than $16½ billion, while imports will have climbed above $15 billion. Our favorable balance on

trade, then, will have been cut to less than $1½ billion.

Of course, this balance on trade is still favorable, and more so than many countries in the world can claim today. What are the elements, then, that actually bring about the adverse balance in our total foreign payments? As you know, there are a whole host of services that we exchange with other countries—travel, shipping, banking, insurance and the like. For Britain these are net earners of foreign exchange, but for us they add up to pretty much of a standoff—we pay out as much as we earn.

But then there is still another set of transactions, a set that has assumed unusual importance for the United States in the postwar years—transactions that reflect vital commitments of a political, military and economic character. These, of course, are our foreign aid, the expenditures we make abroad on our military bases, and our private foreign investment. These all add up to a huge sum in excess of $10 billion annually.

I think it is of great importance that knowledgeable people in investment circles and industry particularly should understand just what is involved in financing these various commitments abroad. Some of these commitments do account for a sizable net outflow of dollars, but others do not.

Take first the matter of economic aid. This now amounts to about $2.6 billion annually if we include in the total approximately $1 billion of loans made by the Export-Import Bank, the Development Loan Fund and other Government agencies. There has been a persistent tendency to single out such aid as the culprit behind the scenes in the current imbalance of our foreign payments.

The facts, however, do not justify this placement of blame, for the great bulk of such aid always has been tied specifically to U.S. exports. Thus if we cut back on the aid, we simply cut back on exports. As a matter of fact, a growing amount of such aid in recent years has taken the form of surplus farm commodities, and if we fail to ship these abroad they merely pile up on our own doorstep.

There has been a portion of economic aid dollars, it is true, which has not necessarily been spent in the United States. So far as I can gather, this has not represented a major amount—perhaps no more than a fourth of the total. Recently the administration ruled that where possible this aid, too, should take the form of U.S. exports. A great hue and cry has been raised over this action, and our Government is accused of deserting the liberal trade policy which it has fought so long to bring into effect on a worldwide basis.

A PRUDENT STEP

I am afraid we must admit that tying loans and grants to exports in theory is a backward step. But it is also a step which, given the full range of our commitments abroad, seems to me to be prudent in the present circumstances. It does not mean that we shall cut out any and all aid that fails to be tied to United States experts. Some essential aid, for example, takes the form of commodities which the United States does not ship abroad on a net basis. Sugar and rubber are cases in point. But the amount left over in this category should be relatively small.

Let us now look at military aid—an outlay as large as its economic counterpart. Here I am talking about shipments abroad of military and related supplies under the various mutual defense treaties which the United States has with other countries. In 1958 this aid amounted to $2½ billion. The entire sum took the form of U.S. exports; so again if we cut back on aid, it would seem we automatically cut back on exports. There appears to be no immediate relief here for the balance of payments.

There are those who would argue against this point of view, however, contending that if we cut back on aid we might get some of the recipients to pay dollars for the military equipment they need. I am afraid that the prospect for this is not very promising. The countries that can really afford to pay for weapons in the United States are already doing so on an increasing scale. Germany is a case in point. It is countries that cannot afford payment—Turkey, Iran, Pakistan, Taiwan, and Korea among them—that receive much of the aid.

OUR BURDEN IS HEAVY

Yet we must recognize also that these countries are undertaking a considerable defense effort on their own, and that the Western World benefits greatly from the forces they are able to muster. In spite of all this, the burden of military aid, as well as economic aid, has fallen very heavily on the United States for a number of years. I would certainly agree that the time has come for other nations in the West to shoulder a larger share, and in the process of redistributing the load we should keep an eye open for any impact on our balance of payments.

That brings us to the second category of special payments which I singled out earlier—payments in support of our own military establishments abroad. These establishments lie at the very heart of our defense policy, but there is no denying that they are one of the major elements in the current imbalance in our foreign payments.

MILITARY COSTS ABROAD

Last year the United States spent about $3.4 billion on the maintenance and support of its military bases abroad; this year the sum is likely again to exceed $3 billion. None of this is tied to exports from the United States, and the countries receiving the dollars are free to use them as they choose.

For what do the military services spend these huge sums? Well, they need to pay U.S. troops in Germany, Britain, Japan, and other nations, who in turn exchange dollars for currencies of those countries. Last year such troop expenditures acocunted for about $900 million of the total. Another $1,100 million went for jet fuel, motor gasoline, fresh foodstuffs and other supplies bought at the most convenient locations. Still a further $500 million was paid out for local services necessary to support and maintain the bases. And so on down the line.

I might add, too, that these dollars are spread out all over the world. Nevertheless, more than half the total goes to Western Europe, with Germany, France, and Britain the major recipients. Another $450 million flows to Canada, while Japan is the chief recipient in the Far East.

Before we consider what if anything might be done about these defense expenditures, let me complete this survey with a brief look at the final category of special outlays which enter into our balance of payments: namely, private foreign investment. Again it has been the policy of our Government to encourage the flow of private investment abroad, and over the past decade business has made a substantial response.

From 1956 through 1958 our private foreign investment ran close to $3 billion. This year, however, the flow has been cut back and may amount to no more than $2 to $2½ billion, in part because high interest rates have made the United States a less attractive place to borrow from. Nevertheless, one of the significant developments in recent years has been the revival of portfolio investment.

MANY CALLS FOR AID

A large number of foreign governments have been coming to the United States for money, including Belgium, Italy, Austria, and Japan, to name a few of them. You may recall that only last week Credit Foncier of France floated $50 million of dollar bonds, part of which were bought by American accounts, to help finance French municipal housing. In addition, Canadian municipalities have long looked to the New York market for substantial funds, and, of course, you all know of the purchase of Canadian and European industrial securities by Americans.

Very few of the dollars arising out of transactions like these are spent directly for exports from the United States. Likewise a part of the direct investment made by U.S. business in branches and subsidiaries abroad is not tied to exports but initially represents a transfer of dollars to pay for plant and equipment in other countries.

At the same time, in judging the full impact of foreign investment on our international balance sheet, we cannot forget the earnings received from such investment which create needed foreign exchange when they are brought back to the United States. These repatriated earnings also have been growing and now come to the quite large total of $2.6 billion a year. One could say, then, that from a balance of payments view our private foreign investment to a considerable extent merely represents a ploughing back of earnings received from previous investment.

In one other sense, however, some of the direct investment abroad could in the future have an adverse impact on the U.S. balance of payments. Many American companies are now establishing facilities in Western Europe, encouraged by the relatively low costs there, as well as by the development of the Common Market. Certain of these companies also are coming to regard Western Europe as a principal base for their exports to other areas.

All this, of course, could in the future act to hold U.S. exports at a lower level than that at which they might otherwise be. I belive it is important to recognize these factors in assessing certain bills which are now before Congress with the objective of adding further stimulus to private foreign investment through special tax incentives. If such bills were to be adopted, it would seem to me to be advisable to limit any special incentives to the encouragement of investment in the under-developed countries.

AREAS OF INVESTMENT

Today very little of U.S. foreign investment flows to areas like southeast Asia and Africa. Rather the great bulk is directed to Canada and Western Europe, and to some of the more advanced countries of South America. I would question whether, as a matter of public policy, we should seek to stimulate artificially investment in heavily industrialized countries abroad, particularly in the face of our present problems.

Let me just recapitulate briefly by restating the balance-of-payments problem in very general terms. Our Nation now has a small, favorable balance on its trade with other countries, but this is more than offset by heavy military spending abroad, plus a small amount of foreign aid which is not tied to exports, and in most recent years by a net marginal of private foreign investment. The result today adds up to a sizable deficit in our total foreign payments. What can and should be done about it? From all points of view the most beneficial move would be to expand exports. I think this can be done, but probably not to the full extent necessary to solve the whole problem.

Exports were clearly depressed over much of 1958 and early 1959 by the business slowdown in Western Europe. In recent months shipments have been reviving, and I think we shall see such items as cotton, aircraft, and even machinery moving out in larger volume in 1960. In this regard it is important that we continue to press other nations to remove discriminatory restrictions that

still stand against U.S. exports. Some nations have made a good start on this, but much remains to be done.

A NEW LOOK AT MARKETS

More will be required, however, than a mere passive acceptance of an expanding market abroad. I suspect that American business will have to take a fresh, hard look at export markets and seek more vigorously to cultivate them. There has been a tendency for many firms to look upon exports as merely an overflow from the domestic market. Products have not been tailored specifically for customers abroad; nor have marketing and servicing facilities been adequate.

Moreover, through many postwar years American producers held an advantage in being able to quote earlier delivery dates. Now this advantage is gone. The plain truth is that the United States has not had to fight for exports as have many countries in Western Europe. Those days, I am afraid, are gone forever.

STILL AHEAD IN SALES

You are all familiar, of course, with the complaint that the United States has priced itself out of world markets. Certainly the inflationary move of the fifties did us no good, and with some products, steel and automobiles, for instance, we no longer hold the competitive position we once possessed. But this Nation has not priced itself out of world markets in any overall sense. We still sell more abroad than any nation in the world; we are spending far more than any of our friends on the search for new products and new ways of doing things.

World trade is never a static thing. It is made up of an ever-changing mix, a mix in which the nation that develops something new gains an advantage. I am sure that we shall be shipping abroad over the next 5 years a whole host of items that have never entered into world trade before.

Yet with all of this, the adverse position in our balance of payments has flashed a warning signal. It has told us that a nation which lacks discipline, which shuns hard, honest work, which looks for the easy way out through Government largesse, is a nation that is heading for trouble, no matter how great its initial power. Certainly the United States is no exception. It is more essential than ever that we avoid the easy path of inflation; that we hold our costs, our Government budgets, and our prices under effective control.

It is an awareness of this need, more than any other, which has caused the eyes of the Nation to focus on the current debate in steel—a recognition that the interests of all the people, and not merely those of the individual disputants, are directly involved.

I think we can say too that the administration is alive to the facts and needs embodied in the balance-of-payments problem. It has taken already a number of steps that are traditional to meet such a problem: The budget is being balanced; a policy of tight money is being pursued; and interest rates are held high to encourage an inflow of funds. All these are important, but we can't be content to let matters rest. Every avenue needs to be explored.

What more, then, can be done, other than expanding exports, to bring futrher relief for the balance-of-payments problem? Clearly the answer does not lie in cutting foreign aid. Nor does it lie in moving backward to new forms of protectionism. Either of these moves would be a signal, not only to the free world but to the Communists as well, that the United States is unwilling to pay the price or bear the burden of world leadership. Once started down this path, there is no telling where we might end, except that the chances for world domination by the Communists would have brightened immeasurably.

A CURIOUS POSITION

One of the political leaders of Europe told me recently that the United States today stood in a most curious yet critical position. "Here you are," he said, "more wealthy and in many respects more powerful than ever. Your national income has never been greater, your people have never been better off. Yet in the eyes of the world you are weaker. The Russians beat you into outer space and then to the moon. For a third of a year the most basic of your heavy industries lies idle. Now you are losing gold; the statements of your own Treasury head have furnished some doubts as to the strength of the dollar; and you are threatening to pull back on your commitments to NATO. Is it any wonder, then," he added, "that the free world is beginning to question whether you can provide the leadership we all so sorely need?"

OUR LEADERSHIP REQUIRED

Certainly the free world continues to need our leadership—aggressive, forceful and constructive—and no matter what the problem with our balance of payments, we must exercise it. No other nation has the resources, the basic strength and the outreach to take over the responsibility from us. It is up to each and all of us to demonstrate that our Nation has the will and the moral fiber to meet our great obligations.

The world we lead today is vastly different from that of a decade ago—due in great measure to the farsighted policies which our Nation has pursued in the past. Rather than a weak Europe, threatened from within and without, we see a vigorous community, exploring new political and economic forms, and growing more rapidly even than we.

In Asia and Africa new nations have climbed to their knees but continue to need a helping hand if they are ever to rise to their feet. And to the south of us our neighbors also show progress, but again they require not only inner discipline but also outside assistance. We have, therefore, not only an East-West problem but, as Sir Oliver Franks puts it, "a North-South" problem: the old adjustment between the "haves" and the "have-nots."

There is certainly no room for complacency in all of this. The European world has been more than rehabilitated and is at present imbued with a new spirit of energy. The other world, however, the Communist world that would bury us, also has been hard at work. And today we find ourselves confronting a monolithic, dynamic force that is more assertive than ever of its eventual triumph.

Confronted with this heavy and unrelenting challenge, and with the changes that have been wrought in the West, I believe the time has come for a new look at the political and institutional arrangements we have in effect for strengthening the free world. I have in mind particularly the arrangements for marshalling the resources necessary for defense and economic aid.

AID PROGRAM EXTENDED

There was a time when the major problem involved allocating resources which the United States largely could make available. OEEC was developed and later NATO and SEATO. As time went on, the United States undertook a broader aid program and Britain joined with others in the Colombo Plan. Nor should we forget the aid which France, even when hard pressed, gave to her overseas territories.

All of this is to the good. But it has led today to a scattered, disparate use of available resources. No longer is the United States the sole nation with a considerable margin of strength to throw into the balance. Western Europe has come to the point where it too can shoulder substantial responsibility for economic and military aid. The problem is how to join all the available resources, including brains, in a common pool which can be effectively allocated among all the pressing needs.

We have to check the disparate forces. We have no institutional arrangement today which can accomplish this. NATO, OEEC, the Colombo Plan—none of them is broad enough. What is needed is an organization which joins North America to Europe to deal with the problems of the Atlantic world as well as its relations with the less developed lands. It could be a regional organization both in terms of politics and economics. An organization of this compass could then look to the whole range and weight of economic forces throughout the free world and see that they are effectively deployed and held in balance.

It would not be too much to ask, in these circumstances, that Western Europe take over the financing of part of the local expenditures the United States incurs in maintaining military establishments within the European area. This would certainly go a long way to assist our balance of payments. And in return we might expand shipments, under both military and economic aid, of items our Nation is best qualified to produce and export. Here is an example of the type of coordination which the free world must undertake if it is actually to realize the progress that will be required. Moreover, it would tend to coordinate not only our economic, but also our political, direction.

OVERALL PLAN NEEDED

The need is not for less aid; if anything, it is for more. And we of the Western Hemisphere and the Europeans are quite rich and strong enough to afford it. But we have moved to the point where a greater measure of overall planning and coordination must be introduced into the process. Balance-of-payment factors cannot be ignored, but they would be dealt with automatically in such a coordinated effort. They would take their place as a concomitant of a free world's consideration of its joint problems. They would not dictate policy but be submerged into it.

To have it otherwise would be to unlearn all the lessons of the 20th century, assimilated at such pain and at such great cost. I have faith that the peoples of the West will grasp this truth, and that one way and another we shall make the adjustments that permit us to move forward.

NEW FORMS ESSENTIAL

To accomplish this consolidation of free world strength we need new forms. It is time, I feel that we should use our good offices to put an end to the incipient economic schism which is developing in Europe. The so-called sixes and sevens, which have arisen, it seems, through a combination of French hesitancy and British traditionalism regarding a continental coalition, embody the beginnings of a political division which would start Europe in precisely the opposite direction from that in which it should now be traveling.

New forms are needed to cope with the problems not only of Europe but of Britain, America and the Western Hemisphere. The composition of eocnomic problems in Europe was very well worked out in the postwar period through the operation of OEEC, and some such form should in my judgment be set up to deal with similar problems of the entire Atlantic world. With such an organization the matter of our imbalance of payments might have been anticipated and composed.

In this case our deficit would have been set in a perspective which would have reduced its significance as a factor in our whole defense policy (which it threatened to become recently, when the early withdrawal of our forces or a substantial portion of them from Europe apparently was contemplated

as a means of alleviating the imbalance). New organizational forms are needed to consolidate our free world strength and make more distinct our whole posture toward both the underdeveloped world and the Communist powers.

And now let me sermonize a little:

The Nation and the free world still face heavy challenges. To meet these we must have a new statesmanship and new forms, but it is even more important that we exert new disciplines—or perhaps revive old ones.

We shall not match and overcome the challenge of the new spirit and mass energy of the Sino-Soviet bloc, with its vast resources of material and manpower, by continued emphasis on increased leisure on our part. It will require the statesmanship I have been speaking of, buttressed by an intensive, inspired, and continuous effort on the part of the ordinary citizen to make himself both more knowledgeable and more productive, if we are to preserve what we might call the good life on this increasingly finite planet. We may have to postpone for a while the flight to suburbia and security if we are to cope with some of the imperatives with which the modern world confronts us.

I hope I have not struck too pessimistic a note. I do not intend to, for though I see a well-defined challenge ahead—of which our balance of payments problem is only a part—I believe I also see a well-defined reply to it.

What it demands is the expenditure of greater thought, energy, and persuasion. I see that Drew Pearson has collaborated in the writing of a book dealing with the forces which are playing about the world and it is called, I believe, "U.S.A.—A Second-Class Power?" We are far from a second-class power. We only could be.

Health Is Paramount

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DELANEY. Mr. Speaker, in recent months the Secretary of Health, Education, and Welfare has been under heavy attack by industry and farm groups because of the cranberry and poultry incidents.

The following item from the New York Times shows the heavy pressure that is being brought on the White House to try to curb Mr. Flemming's efforts to protect the public health by enforcing the Food Additives Amendment of 1958.

It is encouraging that two such outstanding newspapers as the New York Times and the Washington Star fully support the Secretary, and I include editorials from both papers.

The article and editorials follow:

[From the New York Times, Jan. 29, 1960]

ELEVEN FARM UNITS ASK WHITE HOUSE TO CURB FLEMMING ON ADDITIVES

(By William M. Blair)

WASHINGTON, January 29.—Eleven farm groups took to the White House today their plea that the Administration curb the Secretary of Health, Education, and Welfare in his handling of chemicals and drugs used in agriculture.

Representatives of the farm groups discussed the situation arising out of the tainted cranberry and poultry cases with Maj. Gen. Wilton B. Persons, the Assistant to the President, Gerald D. Morgan, Deputy Assistant, and Robert E. Merriam, Deputy Assistant for Interdepartmental affairs.

The representatives submitted a proposal that President Eisenhower name a factfinding body to review the problems in the field and to recommend changes in existing laws and procedures relating to chemicals and drugs used in the production of crops and livestock.

The farm leaders said they had received no promises but they felt the White House aids were aware of the problem and that it was being worked on. The problem, including the dispute between Secretary Arthur S. Flemming and Secretary of Agriculture Ezra Taft Benson, has already been discussed in the Cabinet.

The farm organizations are seeking to prevent Mr. Flemming from repeating the cranberry and poultry incidents, which they contend unduly alarmed the public and caused producers undue losses. Mr. Benson has supported their position.

It also was the impression of some leaders that the White House was eager to prevent the interdepartmental fight from becoming the subject of congressional hearings and election campaign material for the Democrats.

The farm group included officials of the country's three general farm organizations—the American Farm Bureau Federation, the National Grange and Farmers Union, and dairy, poultry and other commodity bodies.

[From the New York Times, Jan. 31, 1960]

CHEMICALS AND OUR FOOD

In the wake of his efforts to protect the health of the American people against any potential health menace that may exist in the growing use of chemicals to increase food production, Secretary of Health, Education, and Welfare Flemming has come under increasingly sharp attack in recent months. The peak of this campaign was reached last Friday when representatives of 11 major farm organizations—embodying essentially the massive political might of the entire farm bloc—went to the White House, and, in effect, demanded that President Eisenhower repudiate Mr. Flemming.

It would be unfortunate, indeed, if the President were to give in to this open use of political pressure aimed at curbing a devoted public servant engaged in a vitally important job. The many chemicals used in producing our foods today have had many beneficial effects in increasing output per acre and lowering costs. But the multiplication of such chemicals and their uses have raised ever more serious questions of the impact upon the health of our people of the residues of these chemicals remaining in the food we consume. With regard to these questions, many of which are complex, the principle must be upheld that where there is doubt that doubt must be settled on the assumption that the health of the American people is primary.

Of course, nobody supposes that the farmers of our Nation want to poison our people. And of course farmers eat the same food that the rest of us do. But as last Friday's White House visit showed, farmers' organizations tend to put more emphasis upon the financial interests of their members and less emphasis upon the health problem than would organizations representing consumers. Mr. Flemming may have made mistakes in the past, but from the point of view of the Nation as a whole it is preferable that any mistakes be on the side of excessive caution rather than of inadequate caution. Those who would use political pressure to weaken Mr. Flemming might do well to remember that consumers vote.

[From the Washington Evening Star, Jan. 23, 1960]

HEALTH IS PARAMOUNT

In administering the Food and Drug Act, the paramount consideration of the Government must be the safeguarding of the public against dangerous contaminants. It is axiomatic that the public health must have priority over special interests which may be affected economically by restraints imposed by the Food and Drug Administration.

It is unlikely that the mobilization of 11 major farm organizations against present policies and methods of enforcing the laws governing food additives was inspired by public health considerations. It is only natural, of course, that the groups should be concerned over the effects of the cranberry, chicken and other "scarces" on their members—the farmers who produce the country's food. So it is hardly a surprise that farm organizations should be planning to ask the President to support a proposed transfer of the FDA to the Department of Agriculture from the Department of Health, Education, and Welfare.

The proposal, however, would be a step backward—one that would run counter to the persuasive reason that led to the removal of the FDA from the Department of Agriculture's control in 1940. It was pointed out at that time that since the FDA was concerned primarily with the protection of the public against health hazards from foods and drugs, the agency more logically belonged in a department charged with safeguarding public health. It also was pointed out that the FDA should not be in a department whose primary concern is the welfare of farmers.

These reasons for keeping the FDA under the Department of Health, Education, and Welfare are still sound. We are confident that the President, if the issue should be brought to his attention, will view the farmers' problem against the general background of the public health and that, as a result, he will continue to support the present effective setup—political pressures notwithstanding.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Senator Gore's Plan for School of Diplomacy Applauded

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter as published in the Chattanooga Times of January 27 which was written to my colleague, Senator GORE, by Ralph Shumacker, an able lawyer and well-known student of government in Chattanooga, Tenn.

The letter applauds Senator GORE's effort through his bill S. 2495 to set up a school of diplomacy to attract the best talent in the conduct of our foreign affairs.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EFFECTIVE DIPLOMACY SENATOR GORE'S AIM

(EDITOR'S NOTE.—Senator GORE says that his bill, S. 2495, is pending before the Foreign Relations Committee and that he is hopeful for its passage.)

To the EDITOR OF THE CHATTANOOGA TIMES:

About a year ago you proposed that the Government of the United States establish a school or academy of diplomacy. I was greatly impressed by the basic merit of your proposal, and I am sure that millions of Americans were similarly impressed.

Our Nation, all will agree, is engaged in a great world struggle with another great power. This struggle is not the shooting kind, and it seems, for the moment at least, to have been taken out of the deep freeze. This does not mean that the stakes are different or any less vital to our ultimate survival as a free society.

Precisely, what is this struggle? We Americans want a peaceful community of independent sovereign nations, whose citizens have, as a matter of right, certain basic political and religious freedoms, who enjoy, through whatever means they deem appropriate to so provide, a measure of social and economic justice compatible with human dignity, and whose governments exist primarily to secure unto each of its citizens a genuine opportunity to attain his maximum potential in all areas of civilized human interest and endeavor.

I believe that the Soviet Union also wants a peaceful community of nations. There is little evidence, however, that it wants other nations to be truly sovereign or independent. The Soviet Union wants to raise the living standards of its own people, but it has absolutely no concern for the social, economic, political, or religious freedom of the individual, and whatever measure of betterment (and it has been truly considerable) it has wrought for its people has been to the primary end that they thereby become of greater value and use to the state, stronger threads in the fabric of a collectivist society.

Hundreds of millions of human beings in the underdeveloped and emerging nations of Asia and Europe are now seeking and will soon demand a narrowing of the awesome gap between their standards of living and those of the more wealthy nations. The spectacular achievements of the 40-year-old Soviet system—although for us at an unconscionable cost in human life, suffering, and degredation—will have great appeal.

If the United States and the Soviet Union, as the leaders of opposing and irreconcilable ideologies, have abandoned war as an effective instrumentality of world politics because it is suicidal, we are obliged and privileged to wage this struggle for the kind of world we want with the weapons of effective diplomacy.

To wage this struggle, we must have men and women, hundreds of them, who know and understand the history, the language, the culture, the religions, the politics, the economics, the resources, the hopes, the ambitions and the aspirations of every people on earth, from the smallest to the largest, from the poorest to the richest. * * *

Thus staffed, our State Department should be infinitely more able to communicate and elucidate our foreign policy to us citizens and to enlist our informed and discriminating support. It should be in better position also to develop well-conceived strategy for conducting our foreign policy and waging the aforementioned struggle throughout the world. This would lend genuine continuity and stability, as distinguished from rigidity or inflexibility, to our foreign policy, would strengthen the President in the discharge of this major constitutional responsibility, and would make meaningful the much talked of nonpartisan aspect of our role in world affairs.

Your suggestion of a school of diplomacy of the highest caliber, good enough to attract our best young minds and personalities, and staffed with the finest faculty we can muster, is in my opinion the best answer to this great problem. There must also be just rewards in the compensation we pay and in the respect we accord such able public servants.

If the battlefield is indeed shifting to the conference room, we need strategists, technicians, and advocates in world politics as much or more than military brains, strength and prowess.

Someone will surely ask about the cost. But the cost, like the cost of remaining militarily strong, doesn't really matter, because failure in this international ideological struggle will mean the ultimate death of our free society.

For the foregoing reasons, I applaud your past efforts in this vital area. I hope your labors will soon be crowned with success and before it is too late.

RALPH SHUMACKER.

In Defense of a Loyalty Oath

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. DAGUE. Mr. Speaker, next to the high honor I enjoy as a Member of Congress there is that which accrues to me by reason of some 17 years as a member of the American Legion's National Publications Commission. This group is charged with the responsibility of managing the American Legion magazine, the organization's nationwide publication, and it is because of that association that I have particular pride in an article appearing in our current issue entitled, "Why Can't Some of Our Universities Be Fair to the U.S. Congress?"

This splendid article rather effectively answers the criticism leveled at the loyalty oath required under the provisions of the National Defense Education Act and is from the pen of Managing Editor Robert B. Pitkin, a distinguished journalist and a personal friend of mine. Incidentally, in addition to his personal qualifications for the task of answering Congress' collegiate critics, it would seem pertinent to point out that Mr. Pitkin is the son of Dr. Walter B. Pitkin, a former distinguished professor of journalism at Columbia University and one of America's best known authors.

In answering criticism by the president of Yale of the action of Congress in this instance Mr. Pitkin identifies the charges as "complaints" Nos. 1, 2, and 3 and replies to them in order.

Complaint No. 1 that Congress has singled out college students for "distrust" above all other Federal beneficiaries is answered by pointing out that this is a defense program and that on the assumption that the student may someday be handling defense secrets we have a right to be sure of his loyalty.

Complaint No. 2 that loyalty oaths will not make a person loyal is answered by reminding the complainants that first it will prevent subsidizing someone who is unable or unwilling to pledge loyalty to the United States; and second it will provide the Government with an instrument for proceeding against perjurers.

Complaint No. 3 that loyalty oaths lead to political and religious oaths Mr. Pitkin dismisses as completely irrelevent and unsupported by any previous action taken by the Congress in this field. And then Mr. Pitkin suggests to the president of Yale that he might look into some of the secret oaths exacted on his own campus by college-sanctioned fraternities.

To sum up, Bob Pitkin has done an admirable job in pinpointing the inaccuracies and fallacies in the charges leveled at the so-called loyalty oath and in addition he has supported Congress in the discharge of its sworn duty as has no other writer in my recolection. The American Legion magazine article in full was made a part of the extension of remarks of the Honorable A. S. HERLONG, JR., on February 1 and is recommended to the careful perusal of every

citizen who believes that the protection of our Government from enemies both foreign and domestic is a paramount responsibility of every American.

Freight Car Supply

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on behalf of the National Association of Railroad and Utilities Commissioners, before the special subcommittee of the Senate Committee on Interstate and Foreign Commerce in support of Senate bills 1789, 1811 and 1812, on June 8 and 9, 1959.

This is a copy of the statement which appeared in the hearings before the Special Subcommittee on Freight Car Shortage of the Committee on Interstate and Foreign Commerce, and is contained in the freight car supply report issued by that committee at the conclusion of its hearings.

I should like to point out at this time that, so far as freight car shortages are concerned, we in the West suffer under an undue handicap. I hope that the Committee on Interstate and Foreign Commerce will be aware of that fact, because the railroad cars which have been allocated to Western railroads have too often been found piled up in the eastern part of the country for use on a rental basis, it is true, but a very low rental basis, to keep the industries of the East going. So we ask a fair share in the use of railroad cars, and we hope that our plea, which we make year after year, will be heeded this time, and that we shall not be confronted next fall with further shortages.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON BEHALF OF THE NATIONAL ASSOCIATION OF RAILROAD AND UTILITIES COMMISSIONERS BEFORE THE SPECIAL SUBCOMMITTEE OF THE SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE IN SUPPORT OF S. 1789, S. 1811, AND S. 1812, JUNE 8 AND 9, 1959

The National Association of Railroad and Utilities Commissioners is a voluntary organization embracing within its membership the members of the railroad and public utility regulatory commissions and boards of the several States of the United States. The Federal regulatory commissions, the ICC, the FCC, the FPC, the SEC, and the CAB are also members of the association but on matters of legislation the association does not presume or attempt to speak for these Federal agencies. My appearance is on behalf of the State commission members of the association.

At a regular meeting of the executive committee of the association held in Washington, D.C., on February 28, 1957, the following resolution was duly adopted:

"RESOLUTION RELATING TO S. 942 AND H.R. 3626, 85TH CONGRESS

"Whereas there has been introduced in the 85th Congress legislation to amend the Interstate Commerce Act, so as to aid in alleviating shortages of railroad freight cars during periods of emergency or threatened emergency by authorizing the Interstate Commerce Commission to promote the expeditious movement, distribution, and interchange or return of freight cars: Now, therefore, be it

"*Resolved*, That the Executive Committee of the National Association of Railroad and Utilities Commissioners hereby records its support of the objectives of such legislation; and

"*Resolved further*, That the legal representatives of the association are hereby authorized to present the views of the association to the appropriate committees of the Congress on such legislation or any similar bills designed to accomplish the same objective; namely, to help alleviate shortages of railroad freight cars."

One of the most vexing, costly, and serious problems in railroad transportation today is the problem of inadequate freight-car supply. The size of the Nation's railroad freight-car fleet has been steadily decreasing over the years. The problem has become one of such serious proportions, that the NARUC in 1955 established a special committee to study the matter. The committee, since that time, has been actively engaged in its study, directed toward accomplishing two objectives: (1) An increase in the Nation's freight-car supply through the building of new and additional cars, and (2) the maximum utilization of the existing car supply.

In line with these efforts, the committee recommended and the executive committee of the NARUC endorsed the enactment of so-called per diem legislation in the 85th Congress. Similar bills, S. 1789, S. 1811, and S. 1812, have been introduced in this Congress. S. 1789 and S. 1811 would empower the ICC in fixing per diem rates to consider factors such as level of freight-car ownership and the value of the use of the car. Such an approach serves more directly as a stimulus to the building of new and additional cars. S. 1812 would empower the ICC, during periods of shortage or threatening shortage, to fix charges in addition to existing per diem charges aimed to promote the maximum utilization of equipment.

Each of these bills is aimed at the same objective; namely, to help alleviate shortages of railroad freight cars, and this objective is heartily endorsed by the NARUC.

While such an endorsement is a serious step, it appears to be a reasonable and necessary one in light of the adverse economic impact resulting from the periodic crises in freight-car supply. The inability of shippers to secure freight cars results in reduced production and payrolls, increased inventories causing greater costs and postponed or canceled expansion programs. While this total loss cannot be fully determined, it does nevertheless clearly emphasize the serious and stifling effect that the freight-car shortage has on the economy in some areas of the United States. The areas most distressed are in those States economically concerned with the transportation facilities available for grain, cotton, lumber, and coal shipments, and the shipment of commodities requiring refrigeration cars.

Furthermore, and perhaps paramount, is the question of what would happen to our defense effort in the event of another full-scale war emergency if the Nation's railroads cannot expeditiously handle the commercial traffic now offered them.

Accordingly, it is deemed appropriate to take all reasonable steps directed toward the acquisition of an adequate freight-car supply and toward maximum utilization of our Nation's existing freight-car supply. In the opinion of the State regulatory commissions, the enactment of such legislation as is before this special committee at this time will contribute to that end. The NARUC, therefore, favors the enactment of this legislation.

Respectfully submitted.

AUSTIN L. ROBERTS, JR.,
General Solicitor, NARUC.

Automation Object Lesson

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the following editorial from the New York Times of January 30, 1960, entitled "Automation Object Lesson."

The Consolidated Edison Co. of New York, Inc., one of the giant industrial enterprises of my district and the surrounding area, has made manifest the kind of cooperation which is needed between management and labor as progressive steps are taken to improve services to the consumer.

Consolidated Edison is to be congratulated on the intelligent attitude with which it operates and labor is to be commended for the fine spirit of rapport it has shown.

The article follows:

AUTOMATION OBJECT LESSON

The visit of 30 New York union leaders to the Consolidated Edison atomic generating plant, now being built up the Hudson, calls attention to a story of automation that everyone should know—especially leaders of management and labor.

The new plant is one more sweeping technological improvement of the many which Consolidated Edison has put into effect during the past two decades. As a result of these the company is now turning out about three times as much current as in the late thirties with only about half as many employees. Even more miraculous, this has been done without discharging any workers on account of technological advances. And, far from resisting the changes, the AFL–CIO Utility Workers Union, Local 1–2, which represents the employees, has cooperated in carrying them out.

All this has come through the company's basic policy of what might be called natural employment attrition. None of the places of those workers who died, or who left the company because of retirement, ill health, or other causes, has been filled as the years went by. And, whenever possible, the workers who remained were upgraded—trained by the company to take the more skilled positions demanded by the increasingly complex mechanisms of generation and control. Then, too, the company has followed a consistent policy of discussion with the union leaders about each step in the march of automation, before it has been taken. The same sort of union-management cooperation has been used in the working out of safety arrangements.

The payoff of these policies has been impressive. With the great increase in the

company's production per worker hour have come constantly higher wages for its employees—average weekly earnings of $116.35 last year, compared with $32.10 in 1930. And there has been no impairment, but rather improvement, in the dividends paid since 1942. Also the mutual respect of management and union that grew with consultation has been a major factor in the company's remarkable record of uninterrupted production. The Con Edison story is an object lesson needed by both management and labor in these strike-bedeviled years.

The Federal Elections Act of 1960

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. HENNINGS. Mr. President, editorial approval of the Senate version of the Federal Elections Act of 1960, better known, perhaps as the clean elections bill, has been heart warming to those of us who have spent years fighting for revision of our election laws. The Nation's newspapers have consistently supported the cause of clean elections over the years it has been, in one form or another, before the Congress. Newspaper editorials—many published prior to Senate passage of the bill; others printed even before the Senate voted on amendments—should, I feel, be made available to my colleagues. I therefore ask unanimous consent that the editorials from the Louisville Times and the Wheeling News-Register be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Louisville Times, Jan. 21, 1960]

TOWARD A BETTER ELECTION LAW

From the time of their birth, the Federal Corrupt Practices Act of 1925 and the Hatch Political Activities Act of 1939 have been criticized as inadequate to the task of assuring clean elections. But for a variety of reasons, Congress had done little or nothing in the intervening years to strengthen them.

For several years Senator THOMAS HENNINGS, a Missouri Democrat, has been a leader in this frustrating fight. He is leading it again this year, and he has been surprisingly successful in the early skirmishing. That is no proof he will win the battle, but at least it permits some qualified optimism.

As reported out by the Senate Rules Committee, a bill now being debated would require more detailed reporting of campaign financing and would raise the legal spending limits which are now at completely unrealistic levels. Senator HENNINGS, however, has several amendments he wants tacked on to that measure.

One of these would make the bill apply to primaries as well as general elections. Another would cover campaign committees operating only within a single State (in its present form the bill applies only to committees working in more than one State). Still another would put an overall limit on the political contributions an individual could make.

HENNING'S first success—and it was a notable one—came Tuesday when the Senate voted to accept the amendment making State primaries subject to spending limits and financial reporting. Obviously this is needed, for in some States, especially in the one-party South, the primaries are in effect the final election.

The familiar conservative southern Democrat-northern Republican coalition took one of its rather infrequent beatings in the rollcall. Thirty-four Democrats and 16 Republicans voted for the amendment; 21 Democrats, mostly from the South, and 18 Republicans voted against it. We are gratified that both of Kentucky's Senators, JOHN SHERMAN COOPER and THRUSTON MORTON, voted for the admendment, as did VANCE HARTKE of Indiana. Senator CAPEHART of Indiana voted against it.

As we have said, this early success does not assure final victory, either for this one amendment or for the bill as a whole. The fact that the two party leaders, Senator JOHNSON of Texas and Senator DIRKSEN of Illinois, voted against the amendment indicates that stiff fighting remains. Still, a good start has been made and we hope that the good fight continues.

[From the Wheeling (W. Va.) News Register, Jan. 18, 1960]

CAMPAIGN DOLLARS

Assuming the necessity and efficacy of congressional limits on campaign spending where Federal offices are involved, extension of the law to primaries and nominating conventions, as proposed in a bill introduced under the bipartisan sponsorship of Senators THOMAS C. HENNINGS, Democrat, of Missouri, and KENNETH B. KEATING, Republican, of New York, would appear to have logic on its side. It is logical, too, in that it would enlarge the spending limits in the Corrupt Practices Act and tighten up reporting provisions.

This newspaper never has had much faith in the effectiveness of campaign spending limits, and is disposed to feel that it is the use made of campaign money rather than the amount of it that should be a matter of public concern. Inasmuch, however, as the principle has been accepted, we can see no good reason for exempting nominations, which are part of the election process, or for refusal to provide additional safeguards intended to produce more effective compliance. It is to be suspected that those who complain that the proposed extension would constitute an "invasion of the proper function of the States" are more concerned about preserving control of nominating machinery than assuring the honesty of elections.

A Bill To Strengthen Penalties for Sending Obscene Literature Through the Mails

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. RODINO. Mr. Speaker, I am introducing today a bill already introduced by Mrs. GRANAHAN, which strengthens the penalties for sending obscene literature through the mails.

It has been estimated that these smut salesmen, as they have been called, do a $500 million business a year. This can only mean that our present laws are not strong enough to deter them from these immoral activities.

I feel that we must make the penalties so severe that this business will simply not be worthwhile.

No one knows how much juvenile delinquency might be prevented if this literature were not readily available to every youngster. We do know that there is a definite link between obscenity and sex crimes, and that obscene matter contributes to the general corruption of youthful morals.

Congress has a responsibility to see to it that this source of corruption is discouraged. I think that one way in which this can be accomplished is to raise the maximum and minimum penalties, as this bill does, and to make prison terms mandatory even for first offenders.

The American Farm School in Greece: Splendid Americans in Action

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. KEATING. Mr. President, it was my particular pleasure yesterday to welcome Bruce M. Lansdale, director of the American Farm School in Thessaloniki, Greece, who is visiting this country to report on the activities of the school. Mr. Lansdale, formerly of Rochester, N.Y., is the son of the former general secretary of the YMCA in Rochester, Mr. Herbert P. Lansdale. The senior Mr. Lansdale is now general secretary of the national council of the YMCA.

I have followed with interest the great variety of activities in which the school is engaged to serve the best interest both of the people of Greece and of the United States. It is an outstanding example of practical technical assistance which is helping people at the grassroots level to improve their way of life. The school is thus strengthening the bonds of friendship between America and Greece and is winning friends for our country all over the world.

The American Farm School, which was founded in 1904, operates a multipurpose program of agricultural and technical training leadership for the villages of Greece. The growth of the school over the past 50 years has been phenomenal. From one mud brick house on 50 acres of land it has grown to a modern productive institution with 50 buildings on 375 acres of land providing a guiding light to rural people of Greece. In addition to a 4-year course for 200 boys, the school operates a short course program for a thousand adults each year, a community development program for training existing leadership, a model demon-

stration center, and a livestock distribution program.

The school has received recognition from both the Greek and American Governments through special help to provide scholarships for students who come from villages all over the country.

I think it is particularly significant that visitors from so many underdeveloped countries of the world have come to study the school's methods to determine its application in their own countries. They thus seek to utilize the unique methods of this school in helping their people to solve their own problems.

One of the most interesting elements in the school's effort is that two-thirds of its income is raised in Greece through the work of the staff and the students and the sale of the products of the farm and its shops. The other third is made possible by the generous support of interested Americans.

I am pleased to have this opportunity to salute Director Lansdale and his associates for their splendid example of American friendship and assistance in action. The American Farm School typifies many of this Nation's best features and is therefore doing much to improve our world standing. It is my hope that thoughtful Americans will continue their strong support for this fine and vital activity.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the pamphlet recently issued by the American Farm School.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

A DREAM REALIZED

In 1902, Dr. John Henry House, a 60-year-old American who had devoted 30 years of service to the people of the Balkans, realized his most cherished dream. He borrowed $500 and purchased 50 acres of land a few miles outside Salonica and started a school to give rural boys agricultural and industrial training under Christian leadership. He built a two-room adobe cottage where the first orphan boys lived and learned. He had no money and no sources of support, but he had faith and a vision and was able to make it come true.

THE FIRE

In 1906 he started construction on the main school building which took him and his boys 10 years to finish. Each new contribution meant a few more bricks and mortar until it was finally completed in 1916. But in the fall of that year, a spark from a charcoal heating bucket set fire to the roof and in a few short hours 10 years of work were burned to the ground. But despite his years, Dr. House did not give up. With help from local sources and from his son, Charles, who came over to help him and later succeeded him, he was able to rebuild his school and a great deal more.

THE PERIOD OF GROWTH

Over the next 23 years the school grew in enrollment and size in its service to the villages of Greece. By the time the war came and the founder's son and his wife were interned in Germany, there were nearly 150 students and over 15 major structures. The land had been increased to 300 acres and the school had established itself as a vital institution in the minds of the Greek people.

THE BOMB

But the occupation brought serious destruction to the school. Before the troops left, they set two bombs in the classroom building and blew it to bits. For a third time it had to be rebuilt, but thanks to the generosity of friends from America the school was ready to reopen by the fall of 1945.

THE KIDNAPING

Tragedy, however, did not end with the war. In January 1949, Communist guerrillas from the north crept into the school one night, kidnaped 43 boys and took them off toward the Iron Curtain. But each in his own way was able to escape and every last boy returned to the school to graduate in June.

THE 50TH ANNIVERSARY

On May 29, 1955, the school celebrated the 50th anniversary of its incorporation. Messages of congratulation poured in from many parts of the world. King Paul and Queen Frederika attended the celebration where retiring Director Charles L. House was honored with decorations from the King and the Royal Academy of Athens and a doctor's degree from the University of Salonica in tribute to his loyal and faithful service to the people of Greece.

THE SCHOOL TODAY

Today, with over 50 buildings, 370 acres of land, 200 students in the 4-year course and over 450 in the short courses, the school is continuing its vital training program. Under Director Bruce M. Lansdale (B.S., University of Rochester; M.A., Cornell), the school is cooperating closely with the Ministry of Agriculture in the improvement of the living standards of the rural population of a country 65 percent agricultural. This striking growth and development has only been made possible through the continued support of a generous company of thoughtful Americans. Thanks to these friends the school approaches the future with confidence that it will meet successfully the challenge of increasing needs for assistance to the families of rural Greece.

Activities of the Port of New York Authority

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 3, 1960

Mr. AUCHINCLOSS. Mr. Speaker, a few days ago, with the permission of the House, I inserted in the Appendix of the RECORD an editorial by the Asbury Park Press concerning the activities of the Port of New York Authority and I am glad to receive permission to insert another editorial by the Asbury Park Press which appeared in their newspaper of February 1, 1960, on the same subject. The arguments presented in this editorial have a great deal of logic and it is too bad that the ambitions of those in charge of the Port of New York Authority blind their minds to the realities of the situation which confronts the area covered by the scope of their activities. The Port of New York Authority should be concerned about all phases of transportation affecting the economy of New York and New Jersey and the able minds of the authority should be addressed to the solution of the grave problems facing commuters and the railroads they have to travel on.

The editorial follows:

MUDDLED THINKING STILL RULES THE PORT AUTHORITY

If railroad commuters are perplexed by the refusal of the Port of New York Authority to live up to its public obligations they have cause to become indignant over the news that the port authority plans to spend $20 million for more bus facilities in Manhattan. Moreover, the port authority believes this $20 million will accommodate all bus demands in the foreseeable future. Then it adds this crushing blow to its rapidly dwindling reputation: "Providing existing rail facilities continue to be available." How it can expect precarious rail facilities to remain available at the same time another $20 million of public credit (sold to bondholders through the use of legislative power) gives buses a greater advantage over railroads is a puzzle. But in recent days the port authority, either through arrogance or stupidity, has not been noted for clear thinking.

This newspaper recently commented on the need for a thorough investigation of port authority operations by the New Jersey Legislature. Its persistent refusal to accept responsibility for the deplorable condition of passenger rail service, though it was created to develop terminal, transportation, and other facilities of commerce, prompted the view that the time has arrived when New Jersey learns through public inquiry whether it has created a supergovernment, immune to public opinion.

Representative JAMES C. AUCHINCLOSS inserted these views in the CONGRESSIONAL RECORD of January 28, and commented: "The growth and power of the various authorities like the Port of New York Authority is something which should have the careful consideration of the Congress to the end that if necessary the public's rights and conveniences should be protected and the operations of the port authority should be confined to the prerogatives given to it under the law."

The port authority has many achievements to its credit but it cannot bask in the glow of these achievements while it persists in a calculated plan to favor one form of transportation over another. The authority has been severely criticized, even to the suggestion that evil forces are at work in behalf of private interests, and its latest scheme will not lessen the growing belief that the authority is endangering its usefulness.

The Sugar Industry in the Dominican Republic

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, February 3, 1960

Mr. BEALL. Mr. President, there appears in today's Washington Evening Star an advertisement concerning the sugar industry in the Dominican Republic.

The spirit of cooperativeness which exists between the United States and the Dominican Republic is in sharp contrast to recent events in another sugar producing country.

I ask unanimous consent that the text of this advertisement be printed in the Appendix of the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

On the eastern two-thirds of the Island of Hispaniola, which Columbus discovered even before he discovered America, an extremely fertile, subtropical and of almost 20,000 square miles (over three-fourths of it cultivable) already produces some million tons of sugar a year.

This proud record is no mere accident of geography * * * no fortuitous sweep of the lavish hand of nature. It is deliberate, manmade, and science-fostered.

In this island republic history reaches as far back as Western Hemisphere history goes. Its Ciudad Trujillo metropolis dates from 1496. Its traditions are rich and colorful. But here is a case where tradition, far from impeding progress, has actively encouraged it.

Here steadily expanding capacity for sugar production has not depended on mere planting of more cane from year to year.

Here the sugar is run by long-experienced business men, by agronomists who know the soil and climate as they know the palms of their hands, by engineers who harness the skills of mechanization to the growth of the soil.

Here, inevitably, sugar output has risen to match sugar opportunity—for this is the land where sugar first grew.

Here too sugar never has failed to meet its export commitments to a world that is hungry for it. It has even made up the sugar export deficits of other producing nations.

From the most powerful and the greatest consuming nation in the world the Dominican Sugar Commission asks only fair and equitable consideration for its country's leading crop—for this increasingly important source of supply in this area which is now so sensitive and responsive to world political and economic conditions.

DOMINICAN REPUBLIC SUGAR COMMISSION.
CIUDAD TRUJILLO, DOMINICAN REPUBLIC.

A Program To Combat the Expansion of Communism

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a provocative letter from one of Westchester County's outstanding builders, Alan Carnoy, who has come forward with an inspiring program to combat the expansion of communism in various areas of the world. Mr. Carnoy has already inaugurated his program in Mexico and has won the respect and cooperation of authorities in the locality where he has developed private homes at low cost for workers and retired people.

In a word, Mr. Carnoy's idea is simply to construct low-cost homes with long-term mortgages so that the purchaser can pay off his obligation as though he were paying rent. By constructing private homes in contrast to apartment buildings the purchaser is given an equity in his own property, long lasting equity in his own country, and a certain sense of pride that comes with home ownership. Experience has shown that people everywhere take pride in their own homes, care for them and improve them because they are capital assets, and in so doing they develop a sense of loyalty to their homeland.

In various parts of the world I have noted a vast program of apartment building where people are housed like pigeons and where there is no sense of home ownership. Such a habitat makes the residents vulnerable to the blandishments of communism. Were these same people given an opportunity to purchase their own homes they would have a sense of dedication to their country that would make them immune to subversion.

Mr. Carnoy's idea, frought as it is with wonderful possibilities, has brought him little but frustration in his contacts with our lending agencies. It is time that we in this country awakened to the need for promoting this intelligent approach to the world Communist problem, with particular reference to Mexico and South America, France and Italy. As Mr. Carnoy points out so eloquently in his letter, the number of Communists is insignificant in all literate countries where home ownership is available. Note for example the United States, Canada, the British Isles, the Scandinavian and Benelux countries, West Germany, Australia, and New Zealand. On the other hand, in countries where home ownership is discouraged communism germinates, takes root, and flourishes.

As Mr. Carnoy's representative in the Congress, I strongly urge that our lending agencies give serious thought to the beneficial results attainable by furthering his program of home ownership throughout the world.

The letter follows:

CARNOY INTERNATIONAL BUILDING CORP.,
New York, N.Y., February 2, 1960.
The Honorable EDWIN B. DOOLEY,
House of Representatives,
Congress of the United States,
Washington, D.C.

DEAR CONGRESSMAN DOOLEY: After 3 years of trying to build homes abroad, I have come to the conclusion that we are sure to lose the so-called economic competition with the Soviet Union in many countries, unless the huge gap between rich and poor is reduced. Our middle class system—a characteristic of which is homeownership—has succeeded in bridging this gap with income taxes and higher wages.

But in many countries the social differences are so great that they give the Communists confidence that their system will expand. Hence, I believe that we can take an important step toward correcting this situation by demonstrating how homeownership can be made available for those in the middle income brackets.

Obviously, a few thousand new homeowners cannot be offered as a substitute for development of natural resources and creation of jobs. However, the psychological appeal of homeownership on those already employed is tremendous, putting their dreams of a better life suddenly within reach.

By purchasing a home through a small down payment, a person with income too small for savings can become a real estate property owner. Each monthly mortgage payment, instead of rent, increases the owner's equity, a source of personal satisfaction. I know from experience that a homeowner is always improving his property, for it belongs to him, is worth money, and will be inherited by his family, whereas a tenant has no interest in even maintaining, let alone improving, the property.

It is of tremendous importance that the home buyer get good value, for he must be sure of a genuine equity from his monthly payments. No restrictions should be placed on his freedom to sell, although when some governments grant really good terms they require that the mortgage be paid off before re-sale is permitted. Of course, the Soviet Union, which heoretically has homeownership, just as it theoretically has personal freedom, would have to require the buyer to resell to the State to prevent creation of capitalists.

The number of Communists is insignificant in all literate countries where home ownership is available. Such is the case in the United States, Canada, the British Isles, the Scandinavian and Benelux countries, West Germany, Austria, Switzerland, Israel, Australia and New Zealand, altogether about 12 percent of the world.

But the Communist vote for years has been enormous and continues to be where the laws do not encourage home ownership, even in highly developed and democratic countries such as wealthy France, or Italy. They are not really Communists, but mostly discontented people who vote to protest against the lack of opportunity for improving their living conditions.

To make possible the building and offering of good homes at a low price all over the world, three factors are fundamental: (1) Land; (2) Mortgages, and (3) Government encouragement. Let us look at these from a practical builder's angle:

1. Availability of land, and not at an exorbitant price; The cost of land was 15.4 percent of the total price of the average home built in the United States in 1959, according to the National Association of Home Builders of the United States. In Latin America, an improved lot usually costs more than the low-priced home which will be built on it, and prices are much higher than in North America.

This stems mainly from the tradition, encouraged by laws, that first a lot should be bought and then a house built with a contractor. This setup is excellent for landowners whose share may be more than all labor and material for the home. In any case, this system will not produce homes with good value when wages for construction workers go up.

In countries which do not have standards of valuation, real estate taxes may be unequal or insignificant, thus encouraging hoarding. In England also with a low real estate tax, land is offered for sale readily because of income tax which actually limits regular income and forces many to sell capital assets.

2. Mortgage money and appropriate mortgages: Public savings are the normal source of mortgages for low-priced homes. In most countries, the governments directly regulate the proportion of public savings for mortgages, as a rule very small and badly used.

For example, the French direct all national savings to one fund which annually allocates the amount of mortgages for each district. The mortgages are up to 70 percent of cost of construction, but as land is not taken into consideration, practically only apartments are built, and far out of the cities, where land is cheaper. If this continues, Paris, like Moscow, may be surrounded by satellite apartment cities in the future.

In Italy, there are some mortgages on 50 percent of the combined value of land and house, a proportion clearly insufficient for the middle class. The government, meanwhile, finances big apartment projects.

In underdeveloped countries, a mortgage banker who takes in public savings will prefer to finance expensive homes for more security.

Savings appear as a natural human instinct in every country not facing currency devaluation. Homes available for a small downpayment are the greatest incentive for more savings. Unlike the nonreturnable investment in public housing or any long-term general development expense, payments on home mortgages are started 30 days after the loan is made.

The higher the mortgage and the longer the term, the more people can buy homes. In most countries right now, 20-year mortgages for 80 percent of the price would be sufficient for many years before satisfying the demand. The interest should be about 2 percent higher than interest paid on savings by mortgage institutions. Any commission or premiums should be prohibited, as these immediately add to the price, which must be kept at the lowest possible figure.

3. Government encouragement through proper laws and taxation: In many countries, taxes and regulations make home ownership very difficult for the middle class.

The tax on change of ownership may exceed 10 percent of the price which adds a very tough cash requirement to purchase of a home. The tax on volume of business raises the price by the amount of the tax. Other indirect taxes such as stamps and special privileges, as of notary publics, not only add to costs, but take time.

Government regulations with respect to technical routine of land subdivision, mortgages, and construction can actually make it impossible to build a home project. As an example, a building permit for a one-family home in the State of New York must be issued within 3 days or refused for a valid reason. To get the same permit in France within 3 months is an achievement, although France has centuries-old traditions of social organizations and cultural leadership.

Our problem, I believe, is to find a practical way, acceptable to other countries, of demonstrating how homeownership can be made available to the middle class. In my opinion this could be done effectively and quickly by using U.S. loans to build model home colonies in the suburbs of the capitals of countries in which we are interested. Such loans should be channeled through local mortgage-savings institutions, with land improvements, home construction, and form of sales handled according to local laws. Changes in the laws could be requested as they become necessary. From practical experience, I know that they will be granted.

In my negotiations with U.S. international lending institutions, I found that our official stand is that housing abroad is such a tremendous problem that it would cost us untold billions, and that therefore the United States should stay away from it.

Such an attitude may help to explain the answer I received from a minor Latin American official when I asked him what he thought of our U.S. Ambassador. "Very charming man," he answered. And what did he think of the Soviet Ambassador? "That's different," the official replied, "he understands our problems."

The Communists have an answer to the housing problem: The government builds. Naturally, the more the government is in business, the more it wants to take over, to produce better and cheaper, thus advancing the economy toward the Communist goal of total control, along with enslavement of the individual.

We, on the other hand, can offer a solution of a free people to the housing problem all over the world: Pay like rent, but own. The obvious mistake is to think about the millions of units needed for poor workers all over the world. Such units as are built are very much disliked by the worker, who does not want to stay poor, nor to be treated as such. So instead of millions of units let us start with thousands of real homes, for which the workers will know that they will also eventually qualify as owners.

No additional burden would have to be assumed by the American taxpayer for carrying out such a program. The Cooley amendment to Public Law 480 (commodity sales) provides that 25 percent of the proceeds of agricultural surplus sales abroad may be loaned, with local government approval, to local American companies.

These loans are now granted mostly to affiliates of the largest American companies, who do create jobs and teach American methods. They are undoubtedly helping the local economy and at the same time creating a certain amount of good will for the United States. The latter is diluted, however, by the fact that many of the products of this and other industrialization measures, especially in the smaller countries, are put on the market at prices which most local residents cannot afford.

Such loans, I feel, could be granted also to small American homebuilders who, with local partners, would demonstrate the American way of homeownership. These loans to builders, in my opinion, would go hand in hand with industrial loans in achieving our basic aims, because homebuilding in those countries is done primarily by hand, using local materials, thus creating more employment per dollar than any other type of investment. This is certainly another of many valid reasons for directing savings in a balanced proportion to home mortgages, not as substitutes for industrial loans but complementary to them.

I can assure you, my dear Congressman, that such a policy, even on a small scale, will make people in other countries say that we understand their problems and that we are willing to help them. On a larger scale, homeownership can defeat communism.

With many thanks for your help in Washington during the past 3 years, and with best wishes, I am,

Sincerely yours,

ALAN CARNOY.

Soviet Attempts To Infiltrate Africa

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 3, 1960

Mr. HUMPHREY. Mr. President, Edward Crankshaw, the distinguished British expert on Soviet affairs, has written an article on the increasing Soviet attempts to infiltrate Africa. I hope that the article, which was published in this morning's Washington Post and Times Herald, will receive the thoughtful attention of our State Department. I should particularly like to underline the lead paragraph:

It looks like 1960 will be the Soviet Union's African year. A whole galaxy of Soviet leaders and functionaries has lately been shedding its light on all sorts of corners of the Dark Continent, and many more Russian visitations are expected.

It is my hope, Mr. President, that this article will help us to awaken to the need to more fully identify ourselves with the needs and aspirations of the emerging peoples of Africa.

I ask unanimous consent that Mr. Crankshaw's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET VISITORS PAVE WAY FOR MOVES INTO AFRICA—GALAXY LIGHTS DARK CONTINENT

(By Edward Crankshaw)

LONDON.—It looks like 1960 will be the Soviet Union's African year. A whole galaxy of Soviet leaders and functionaries has lately been shedding its light on all sorts of corners of the dark continent and many more Russian visitations are expected.

The delegation attending the independence celebrations in the Cameroons was headed by M. M. Firyubin, husband of the redoubtable Madame Furtseva, former Soviet Ambassador to Belgrade and now a Deputy Minister of Foreign Affairs who accompanied Marshal Voroshilov on his trip to India.

Firyubin's entourage included official representatives of the Ukrainian and Byelorussian Republics, as though to establish a precedent of offcenter dealings with new states.

INAUGURATION CELEBRATED

To Monrovia, to celebrate the inauguration of the Liberian President's fourth term, went an even more imposing tributary: the young and powerful Uzbek member of the Central Committee Presidium and Secretariat, N. A. Mukhitdinov. He worked very hard, seizing the opportunity to have talks with other African leaders.

He met the President of Guinea, Sekou Toure, only lately returned from his own grand tour of the Soviet Union. He met also the Deputy Prime Minister of Ghana and the Prime Minister of Togoland, who took the opportunity to invite a Soviet delegation to attend the ceremonies planned to mark Togoland's own independence later this year.

Finally, the Soviet Union has just sent a new Ambassador to Guinea, who turns out to be none other than Daniel Sollod, Moscow's Middle Eastern ball of fire. After a very successful time in Syria, Sollod went to Cairo, where he had a great deal to do with the events leading up to Suez. Until the other day he was head of the Middle Eastern Department of the Soviet Foreign Office. He seems rather a heavyweight for Guinea.

How much of a threat is all this? And what kind of a threat? For the time being, it does not amount to very much. The Russians are learning rather than doing. Africa is a new field for Russian interests and, obviously, a very promising one.

GREAT DEAL TO LEARN

The Russians themselves seem to have realized that they know next to nothing about Africa and that there is a very great deal to learn, particularly about the variety of Africa and its history.

There is no sign at all that they are preparing for the violent sort of activity that characterized their postwar penetration into the Far East; nor are they blundering about as they did more recently in the Middle East. They are being very cautious indeed.

The breakaway of Guinea from France offered, of course, an opportunity too good to be missed, and Moscow certainly regards the credits extended last summer as money

well invested. But even in Guinea no serious attempt is being made to spread Communist doctrine so far. This applies to the whole of Africa.

Certainly there is a school in Budapest where African leaders are being trained as Communist-minded trade unionists; but it is a very small school running very short courses. In the first 4-week course early last autumn, there were only 30 Africans from 10 African countries—mostly French-speaking territories. And the purpose of the course seems to be fairly generalized anti-colonial agitation.

In Moscow, Prof. Ivan Potekhin, perhaps the leading Soviet expert on Africa, has been appointed chairman of a new body, the Soviet Association of Friendship for the Peoples of Africa. Prof. Potekhin is rather more than an academic; he is taking it upon himself to tell African nationalists what Moscow expects of them.

It expects a certain amount of violence. Thus in the Contemporary East, an organ of the Soviet Academy of Sciences, Prof. Potekhin has criticized those African nationalist leaders who think that the proper way to national freedom is through negotiation and compromise.

But with all this, there is no emphasis on communism. Moscow is offering moral support to African nationalist movements, expressed for tactical reasons in varying tones of voice, but no more.

Try a "Vimburger"

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. GATHINGS. Mr. Speaker, there is no limit to the ingenuity of the American housewife. Mrs. Wayne F. Smith, of 1319 North Izard, Forrest City, Ark., has devoted her talents both as a cook and as a nutritionist to the development of tasty vimburgers made from soybeans and rice.

Mrs. Smith, who collects health recipes, finds that soybeans ground and added to other recipes enhances both the taste and the protein value of the food. The following article from the January 28, 1960, issue of the Crowley Ridge Chronicle will be of interest to Members:

TRY A "VIMBURGER"

Milk, cheese, sandwich spread, appetizers, cooking oil, and vimburgers are now being made in Forest City from soybeans.

Offhand, this sounds as if a new industry had located here. Actually, making these products is a daily activity of Mrs. W. F. Smith, who grinds soybeans in her own mill on a kitchen table.

Mrs. Smith points out that soybean products are very nutritious and high in protein.

"They are also cheap, and 65 cents worth of soybeans will last for months," she says "Vimburgers are a substitute for meat, and are made with about two parts of brown rice and one part of soybeans. Both of these are ground, seasoned, and then cooked in a pressure cooker."

Mrs. Smith says that she often uses these vimburgers for breakfast as a substitute for sausage.

She also grinds her own corn for cornbread, and keeps corn in the shuck on hand. It is much healthier than the meal bought in stores, she says.

The soybean flour is always used with meal, or wheat flour. Since she has been using so many soybeans and other health foods, Mrs. Smith says that she has felt much better. You'd be surprised how much proper nutrition, with plenty of protein helps.

People who have suffered with gall bladder attacks, ulcers, and even heart trouble have had no reoccurrence of their trouble when they eat health foods, she said.

A mock oyster stew is one of her favorite foods. This is made by taking all of the starch out of flour. "After the flour is soaked and washed in cold water, the starch is taken out and the gray mass that is left is gluten. This may be ground and from it, oyster stew, or even substitute roasts made."

One of Mrs. Smith's hobbies is the collection of health recipes.

The home grinding carries over into a shampoo, which she makes with a mixture of ivory snow, mineral oil, lemon juice, and water.

Mrs. Smith was reared north of Forrest City, had lived for a number of years in Chicago, before returning here.

For an appetizing breakfast, why not try this protein-packed soybean-rice meat substitute as sausage. They will tickle your palate and be good for your health.

Aid to Africa and Other Nations

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. JAVITS. Mr. President, I invite attention to the forthcoming meeting of eight capital exporting countries in Washington late in March, to discuss national and international efforts at coordinating investment in Africa, and other emerging nations of the world, as reported in the New York Times, February 2, 1960, by Dana Adams Schmidt. The same dispatch includes a recapitulation of economic and technical assistance to underdeveloped areas by France, Belgium, Portugal, Israel, West Germany, and other countries. I ask unanimous consent to have Mr. Schmidt's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFRICAN AID LOAD SEEN AS EUROPE'S—UNITED STATES TO TAKE MINOR ROLE BUT PLANS TO INCREASE HELP TO LANDS BELOW SAHARA

(By Dana Adams Schmidt)

WASHINGTON, February 2.—The United States expects Europe to carry the main burden of assisting the economic development of newly independent African nations, U.S. officials said today.

The State Department expects, however, to ask Congress this spring to increase the programs of technical assistance for the countries south of the Sahara. They now amount to about $15 million a year.

Education and training are the pressing needs of all the African countries except the Union of South Africa, according to State Department studies.

Yet the Department hopes to avoid large programs of U.S. grants and loans for capital investment in this part of the world.

While the Development Loan Fund has made loans of $20 million for projects in Ethiopia, Somalia, and Liberia, and the Export-Import Bank is willing to consider loans to African borrowers, the State Department expects the big investments to continue to be made by European countries and by international institutions.

MUCH AID NOW PROVIDED

The French Government has reported that it is putting $600 million a year into grants and loans to its African territories, excluding Algeria. The British figure for all forms of aid to African territories is $180 million.

The Belgian Government planned to spend $75 million in the Belgian Congo this year on economic development, balancing the budget, and health and scientific research. Belgian sources in Washington expect this program to continue even though the Congo will become independent June 30.

Portugal has reported spending $40 million to $50 million per year on such programs, and Italy between $6 million and $7 million.

Israel has begun to play a small but important part in West Africa where her investors, contractors, and technicians are sometimes favored over the representatives of larger and more powerful nations.

West Germany, with a $20 million technical assistance program, is also beginning to play a role.

WORLD BANK BIG INVESTOR

The big international investor in Africa's future is the International Bank for Reconstruction and Development, which has lent $530 million to countries south of the Sahara and $100 million to countries in north Africa.

The six nations of the European Common Market have set up a $300 million fund to back African development.

An effort to coordinate all national and international investment in Africa and other under-developed areas will be made by a meeting of eight capital exporting countries due to meet here late this month in March. The meeting is sponsored by the Organization for European Economic Cooperation.

One of the main objectives of the meeting will be to devise means of dealing with Soviet penetration.

In Africa south of the Sahara this has taken the form of credits of $35 million to Guinea and $100 million to Ethiopia.

Guinea has agreed in principle to receive French economic aid again and the United States has begun negotiations for an aid agreement.

Today's Farm Problem

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. SHORT. Mr. Speaker, the magazine U.S. News & World Report, in its issue dated February 8, 1960, has published an unusual but factual appraisal of today's farm problem. As a member of the House Committee on Agriculture, and a lifelong operating farmer, I can testify to the many frustrations with which the modern farmer is faced, in staying in step with new developments

and financing new equipment and facilities. Some legislation that was passed to help the farmer has over the years been of questionable benefit to the small wheat farmer, particularly. I must say, I have not given up hope for legislative relief in 1960, but the outlook is not bright. The complexion of the Congress is the same as last year, but it would be my desire to lay aside political differences on this important matter.

The disagreements among the major farm organizations over a basic approach, I believe, have been tempered to a small degree. Among our farm population itself, I believe, there is recognition that a further buildup of surpluses must be stopped. Under the circumstances so clearly set out in this article, it is difficult to see how the farmer could cut his production and stay in business without an increase in price.

Mr. Speaker, the magazine article I ask to include here contains some basic truths about the situation in farming today, and I commend it to the House of Representatives:

WHERE MODERN EFFICIENCY DOESN'T PAY OFF

Farmers once again are caught in a squeeze between rising costs and declining income. The squeeze is expected to grow tighter as pay raises for city workers, sparked by the raise in steel, are passed on to farmers in the form of higher prices on the things they buy.

What the farmer sees when he looks at the facts is shown by the accompanying chart. He sees, for one thing, that efficiency hasn't paid off for him.

The American farmer, on the average, has increased his efficiency by 65 percent in the past 10 years. He has done this by investing his own money, or borrowed money, in new machinery and improved methods. This improved efficiency has been accompanied by a drop of 7 percent in farm prices.

By contrast, the city worker in offices and factory has had raises far greater than his increase in efficiency. While efficiency in offices and factories has gone up by 21 percent in the past 10 years, pay has risen by 58 percent. The increase in efficiency by city workers was due largely to investment by employers in new equipment and methods.

BARGAIN FOOD? NO

Consumers, however, have not enjoyed lower food prices as a result of declining farm prices.

The food from U.S. farms that goes into the market basket of the average housewife now returns the farmer 12 percent less than it did 10 years ago. The housewife, however, has to pay 9 percent more than she paid 10 years ago. Increases in middleman costs have more than offset the farmer's loss.

Farmers, as a result, get a smaller percentage of the consumer's food dollar than at any time since 1939.

Another comparison watched by the farmer is the parity ratio, official measure of his buying power. It has dropped nearly 20 percent since 1950, to the lowest point since 1940. In simple terms, this means that a bushel of corn, a bale of cotton, a slaughter hog will buy less than 10 years ago.

All this has put the farmer on a treadmill. He has increased efficiency, enlarged his farm, sold more products. But his income for a year's work remained virtually the same in 1959 as in 1950—about $2,500 for the average U.S. farm. Those dollars, today, are worth 18 percent less than in 1950.

That is today's farm problem as seen by farmers.

The Van Buren Award to Mrs. Olga Weber, of Louisville, Ohio

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. LAUSCHE. Mr. President, I have recently learned that Mrs. Olga Weber, of Louisville, Ohio, is the first individual not in the service of the Federal Government to become the recipient of the Van Buren Memorial Award, presented by the Defenders of the American Constitution.

I am pleased to join with her many friends in extending sincere congratulations upon the occasion of her being the recipient of this significant document.

Mr. President, I ask unanimous consent that the text of this Van Buren Memorial Award be printed in the Appendix of the RECORD.

There being no objection, the text of the award was ordered to be printed in the RECORD, as follows:

SEPTEMBER 17, 1959.

The Defenders of the American Constitution take pleasure in presenting their award for the American citizen, not a member of the Federal Government, who has done the most during the year 1959 and before, to promote love, respect, and knowledge of the American Constitution among his or her fellow citizens, to Mrs. Olga T. Weber, of Louisville, Ohio, citing the following achievements:

Displaying extraordinary courage, persistence, and energy in her unselfish, patriotic endeavor to keep alive in the minds and hearts of her fellow citizens the proper reverence for the American Constitution, which is the spirit of the Republic and our shield against tyranny, Mrs. Weber contributed books and patriotic literature to schools and the general public. She persuaded Gov. FRANK J. LAUSCHE, of Ohio, to proclaim September 17 as Constitution Day in that State. Through Congressman Bow, of Ohio, she introduced in Congress a resolution to declare this date a legal holiday, and caused a resolution to be passed by the Congress and signed by President Eisenhower observing September 17-23 as Constitution Week. She obtained from the town council a resolution making Louisville, Ohio, "Constitution Town," and followed this up with highway markers obtained through the Ohio State Archeological and Historical Commission reading: "Louisville, Constitution Town, originator of Ohio's annual Constitution Day, September 17." Finally, she has brought about in Louisville a great celebration on September 17, Constitution Day, with parade, speeches by prominent people in the public square, and Constitution quizzes in the schools.

Undaunted by the indifference and sometimes the hostility of some citizens and officials, Mrs. Weber carries on her campaign. By her conduct she has rendered great and lasting service to the United States of America, and set an example of patriotism which, in these dangerous and precarious times, is invaluable. The Defenders of the American Constitution doff their hats to a great American who ranks with the Founding Fathers in preserving the Constitution which was their legacy to Americans of today.

P. A. DEL VALLE,
President, Lieutenant General U.S.M.C. (Retired).

Achieving a Peaceful and Prosperous World

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mrs. BOLTON. Mr. Speaker, truly one of the major challenges facing us today is that presented by the underdeveloped areas of the world. As more and more nations emerge into independence, the ideological contest for these uncommitted peoples will become ever more intense.

In a recent address before the 64th Congress of American Industry in New York, Mr. Thomas J. Watson, Jr., president of International Business Machines Corp., forcefully outlined the nature of this challenge and underscored the urgency of vigorous U.S. action to meet accelerated Communist programs. Mr. Watson's remarks are particularly significant in view of his capacity as one of our Nation's prominent leaders in the business community.

Believing that it will be of wide interest, I ask that his address entitled "Achieving a Peaceful and Prosperous World," reprinted in the January 1 issue of Vital Speeches of the Day, be included at this point in the RECORD:

ACHIEVING A PEACEFUL AND PROSPEROUS WORLD—IT WILL TAKE SACRIFICES, COURAGE, AND HARD WORK

(By Thomas J. Watson, Jr.)

I have been assigned a very broad title today, and I shall try and cover just a small portion of it. It is, as you perhaps know—"Achieving a Peaceful and Prosperous World."

This hopeful world the subject describes depends upon our progress here at home, our progress with the industrialized nations of the world, our relationship with the Soviet Union, and our relationship with the underdeveloped areas of the world.

Obviously, there is time this morning to deal with only a fractional part of the problem. I have picked an area which I believe deserves our attention and is getting very little of it. The problem of the underdeveloped or developing areas of our world.

Before I start, may I congratulate Stanley Hope and all of the officers and directors of the N.A.M. for the magnificent planning that has gone into this very interesting conference. I'm sure that all of us will gain a great deal through our presence here.

In order to think about some of the means at our disposal for achieving a peaceful and prosperous world, it is necessary to begin by looking backward.

Since the end of World War II, we have witnessed a number of revolutionary developments—events of great historical significance.

We have seen the production of goods and services in the United States doubled and resulting benefits in the form of higher incomes and greater leisure.

We have seen the triumph of the Marshall plan, and the beginning of the common market * * * a dramatic demonstration that at long last, major countries in Western Europe are beginning to adopt the American philosophy of broad consumer markets and an economy of the working man.

We have witnessed a technological renaissance in science, in the atom, in missile development, in satellites, and space exploration, in electronics, and in chemistry.

We have seen emerge a new world balance of power, with a Soviet Union that has made formidable strides on every front: economic, social, and scientific.

Finally, and perhaps most important of all, we have seen the emergence—the political birth or achievement of independence—of 22 new nations. These new nations are concentrated in the nonwesternworld. They are found in Africa and the Middle and Far East. Largely, their names are unfamiliar, their locations obscure.

In Africa: Ghana, Guinea, Libya, Morocco, Sudan, and Tunisia; in the Middle East: Israel, Jordan, and the United Arab Republic; and in the Far East: Burma, Cambodia, Ceylon, India, Indonesia, North and South Korea, Laos, Malaya, Pakistan, the Philippines, and North and South Vietnam.

I mention them all, for in the years to come, many of them will become tremendously important to the Western World.

These nations have a total population of about 800 million * * * one-third of the world total. They have a great deal in common * * * despite their different cultures, backgrounds, histories, political institutions, and varying stages of economic development.

They have all undergone—or are undergoing—radical changes * * * political, economic, and social. These changes are inspired by a nationalistic fervor; an almost fanatic desire to thrust off the yoke of colonialism; to free themselves from imperialism; to establish self-rule and to achieve in their own right the dignity of being free. These nations are most anxious to eliminate poverty and to secure a standard of living and a degree of security commensurate with what mid-20th century technology can provide.

It's appalling to realize while we sit in our warm comfortable America that almost a billion people have an average per capita income of about $150 per year. It seems obvious that these people are susceptible to a new governmental philosophy in the future. What that philosophy will be will depend largely on how interested we Americans become in the problem and how well we sell our ways to these people.

Therefore, I believe that one of the major keys to a peaceful and prosperous world is to be found in these underdeveloped and largely uncommitted areas of the world.

In the great ideological contest of our times—that of Western democracy and Euro-Asian communism—these uncommitted nations will play a strategic part; indeed, as they grow in power and strength, their weight may be great enough to shift again the entire world balance of power.

It is, therefore, imperative that all Americans know more about these nations and that we in the United States exert the kind of bold and imaginative leadership essential to win the large majority of these nations toward Western orientation.

In the great contest for these all-important, uncommitted nations—two major problems immediately stand out:

First, we face a serious challenge from Moscow. Economically, they are still far behind us but they are growing rapidly and they have the advantage of being able to concentrate their resources where it is politically most feasible.

To those not living in the advanced industrial nations, communism, on the surface, is easy to describe with appeal. It offers what sounds like a magic road to success. It proposes to take from the rich and give to the poor. There are concrete successes which it can point to and its salesmen never speak of its weak points. Its one-party system * * * its state-above-individual philosophy * * * its dictated policies * * * all these are left out of the sales talk.

The Soviet acknowledges—even publicizes—the reality that more than one-half of the world's populations still live on inadequate diets. Most important, it proposes to change this for the better.

Communism points with pride at its own achievements. Khrushchev has told us and the underdeveloped nations in ringing statements that:

Industrial production in the Soviet Union has increased 36 times since 1913, but only 4 times in the United States. He forgets our relatively high and his very low 1913 base.

That all Soviet citizens are literate versus 24-percent literacy before the revolution.

That last year, they graduated 94,000 engineers against our 35,000.

He tells us how successful his 7-year plan is already proving to be—how in 1959 alone they will produce more than $10 billion worth of goods more than the plan for this year calls for.

He talks boldly of radical increases in oil production, steel production, hydropower developments—and not least of all—their space and missile achievements. All this is tremendously impressive to underdeveloped nations.

Some years ago, Lord Balfour described communism as a great way of making rich men poor but a dubious way of making poor men rich. Their record of performance is to the contrary. Communism has raised the standard of living in Russia materially. Our democratic system has done much better under any comparison but attempts to prove the Soviet system an economic failure are wishful thinking.

The people from the less developed nations see what is going on. They are constantly reminded of it in glowing terms, and they cannot help but wonder whether they should not try to emulate what may appear to them to be a successful system. And, the Soviet does what it can to spark this belief. In addition to extensive propaganda warfare, the Soviet Government has put out more than $2 billion worth of capital commitments in 19 countries since 1953—supervised by more than 2,800 very enthusiastic Soviet technicians.

In the face of the startling increases in production which I have related and which are a matter of common knowledge to all of you, I would make a plea for complete realism in understanding the appeal of communism to underdeveloped and underprivileged nations. To look on Khrushchev's claims, however exaggerated, as ineffectual is merely to put one's head in the sand.

I was stationed in the Soviet Union during World War II and went back to Moscow this summer for a short visit. The enthusiasm of the average Russian for his system and what it has produced is amazing. They are proud and they believe solidly in what they are doing.

I'm sure when they go abroad as technicians assigned to an underdeveloped area, their pride and enthusiasm make them very effective salesmen for communism.

The second major problem we face is internal and perhaps it is more important than the external problem, which is largely Russian.

Specifically speaking, it's the apathy which has crept across our whole land. Our system has produced so much for us that it has an ominous tendency to soften us as a people. We are apathetic about our Government, our defense posture, inflation, and many other things.

Today I will address myself to our apathy about things international. Internationally, we've had our way for so long that perhaps we conclude we can continue to win on international issues without real knowledge and effort.

We are an acknowledged world leader but we can't run on our reputation. We've got problems abroad as close as Cuba, Panama, and South America. The sooner we recognize these problems as serious * * * and the sooner many of us get interested in them, the sooner they will begin to be solved.

Our apathy, internationally, is based on lack of knowledge. We are the world's largest international investors and traders. If we lose our position in world markets, we lose more than anyone else. Yet, we don't seem to realize it. World markets are vital to our whole economic machine. A substantial loss in these markets will mean a lessened prosperity here at home. The philosophy of isolation isn't compatible with our modern United States, even just on an economic basis.

Those are the two sharp facets of the problem. Soviet realism and salesmanship sparked by great enthusiasm * * * and America's vastly superior economy and political system with an apathetic American public.

Of course, there are a number of things to be done. Many are already started and I detect a stirring in the United States which I suspect is a change in our national attitudes.

It's imperative that we understand our need for friends and allies abroad. We simply can't exist without them.

One of the very important ways of winning allies is through our mutual security program—Foreign Aid. This is a program which has always had bipartisan support. President Truman and President Eisenhower both have strongly supported the program. Yet, it is always debated and pared in Congress.

For the fiscal year 1960, Congress was asked to appropriate $3.9 billion for the mutual security program * * * much of it for underdeveloped nations. It was emphasized that this was the minimum figure necessary to accomplish our objectives. The final appropriation was $700 million short * * * almost 20 percent less than was requested.

While we cut our appropriations, the Communists increase theirs. By concentrating their expenditures in selected countries, they are getting more mileage per ruble spent. Currently, they are spending considerably more than we are in Indonesia, in the United Arab Republic, in Yugoslavia, in Afghanistan, in Ceylon, in Iraq, and in Ethiopia * * * all countries important to us.

We must realize that the Communists are fully committed to the contest for the underdeveloped nations, while at times it appears that we haven't really decided whether we are competing or not.

There are many critics of the whole foreign aid idea. We should ask ourselves why we initiated our aid program with the Marshall plan and why we have initiated all other aid programs abroad * * * ask ourselves the basic reason for the expenditure of every American penny abroad. Of course, it has been our enlightened self-interest. For this reason, requests for appreciation from foreigners and requests for publicity in foreign papers as to how much we have done for their nation are really ridiculous.

The Marshall plan money was spent abroad to prevent the entire European Continent from becoming Communist satellites * * * and I think that there are few in this room that would deny its success.

Our military and economic aid abroad since that time has all been for this very same reason.

Foreign aid is aimed at building up the economies of our allies and friends throughout the world. Developing nations need capital just as we needed foreign capital

here at home to aid in developing our own economy years ago.

Foreign aid must one day cease, even in underdeveloped areas. It must be supplanted by a trade program of major proportions and on a two-way basis. The Soviet is most active in making trade agreements, supplemented by long-term credits to these nations * * * and we must compete and win in this area.

These nations are capital shortage nations. They can raise capital by trading abroad, by importing capital, by encouraging private investment. We should aid them * * * by lowering tariffs, investing abroad and sharing our great stockpile of know-how with them.

We must strengthen and improve our posture of leadership throughout the world. We must elect Government leaders who understand that partisan politics at home must be balanced by effective international leadership.

Finally, to reach the goals which we set for ourselves, we must realize that some sacrifice is necessary. We can't do all of the things necessary for the United States to do—in this country and abroad—and still proceed on the "business as usual" basis. Additional expenses should be balanced by additional taxes or a commensurate reduction in existing Governmental expense. We want to spend everything that is necessary for all of the programs to strengthen America * * * we want a balanced budget * * * and we want the same or lowered taxes. These three are incompatible. One of our first sacrifices must be a willingness to accept higher taxes, if necessary, in order to accomplish our purpose of keeping America ahead of the world on all counts. There are no easy solutions.

The future can be as bright or as dark as we choose to make it.

The choice of how America goes in the years ahead is squarely up to us. We can't lay the responsibility on our Government, our President, or our military leaders * * * for in the end, we are the policymakers.

The decision that we will make the sacrifices necessary for victory is a difficult one to reach. Our Government can reach it only if it is backed and led by a majority of people who clearly support its decision.

This country is a shining goal for nearly all the people on earth whether they admit it or not. The fact that nearly all Americans have a chance for success and that many or most do in fact succeed, is well known abroad. Most of the uncommitted nations want to follow us. Let's make it possible, even easy, for them to do it.

We won't do it with fizzling rockets or lowered taxes or something for everyone. It will take sacrifices and courage and hard work, but the goals are tremendous, so let's get on with the job.

The alternative is not one which we would want to contemplate.

The Social Security Drama of 25 Years

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 3, 1960

Mr. WILEY. Mr. President, during its lifetime, the United States—as a pioneering nation of free government—has faced tasks of designing programs to meet the many-faceted needs of its citizens, within its political and economic principles and systems.

The success of these endeavors is probably best illustrated by the fact that, as a people, we now enjoy the highest standard of living in the history of the world.

We recognize, of course, that during our trial and error processes, we have not always been successful; too, there still remain many unsolved problems as we face the future.

In a nation of freedom and progress, however, the creation of ever-better living conditions has miraculously lengthened the lives of our people.

The 1900 life expectancy was 47 years. By contrast, the average today is 70 years.

With greater longevity has come the challenge of providing for the increasing number of senior citizens at the apex of life—in retirement when they are no longer members of the labor force, often with little or no income, and without a retirement "nest egg."

Recognizing that a great need exists in this field, there nevertheless have been widely divergent views as to how the need should be met, or whether it should be met at all through a national program.

However, the Nation 25 years ago established the old-age and survivors insurance program. The program has from time to time been the target for criticism. For example, there have been those who thought that the program was not the kind that should be integrated into a basically free-enterprise, private-initiative system.

Whatever its shortcomings, social security was adopted, and is now one of the broadest pieces of welfare legislation enacted in our history. Today, about 9 out of every 10 of our citizens are covered by the social security law. At the end of 1959, almost 13,750,000 men, women, and children were drawing old-age and survivors and disability benefits averaging $80 a month. The benefits totaled $10.3 billion.

In Wisconsin last year, more than 319,000 persons drew benefits totaling more than $20 million a month.

Despite the broad coverage of OASI, I nevertheless believe individuals and private enterprise through privately sponsored programs should be encouraged to provide benefits for retirement years to the maximum extent possible.

Generally, however, social security is helping to meet the needs of more than 13 million citizens—many of whom are not otherwise provided for—and continues to make a substantial contribution to better living conditions for these upper-age citizens.

The program, itself, of course, needs improvement. Among other things, I believe, that the present limitation of $1,200 annually allowable on extra earnings is absolutely unrealistic. For that reason I have introduced legislation to increase the amount from $1,200 to $1,800 annually.

In view of the high cost of today's living, Congress, too, should, I believe, take a sympathetic look at various other aspects of the program, including the level of benefits, age of eligibility for disability retirement, and other requirements of the program.

In designing the social security system, there were a number of individuals in Wisconsin who played significant roles. These include Prof. John R. Commons of the University of Wisconsin; Edwin E. Witte, sometimes called the father of social security; Arthur J. Altmeyer, the first Federal Administrator, who was dubbed "Mr. Social Security;" and Mr. Wilbur J. Cohen, a pupil and aid of Professor Witte at the Madison campus of the University of Wisconsin.

Recently, the Milwaukee Journal carried an article entitled "Social Security Drma of 25 Years." This informative article reveals the significance of the role which social security has played in the life of the people of our country.

Reflective of the U.S. pioneering efforts to fulfill the needs of its aging citizens, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Jan. 31, 1960]

THE SOCIAL SECURITY DRAMA OF 25 YEARS, MOST IMPORTANT SOCIAL LAW IN U.S. HISTORY, HAS BROUGHT BIG BENEFITS, STILL IS GROWING; FOUR WISCONSIN MEN HAD MAJOR ROLES

(By Ellen Gibson)

To Americans under 45, social security is as much a part of their way of life as the public schools, collective bargaining or weiner roasts. Older citizens may remember how the very idea of social security 25 years ago shocked some contemporaries into cries of "socialism" and predictions that initiative and thrift were doomed.

This year social security celebrates its silver anniversary. The act setting it up was approved by a lopsided congressional majority in the heyday of the New Deal. When President Roosevelt signed it on August 14, 1935, he called the measure the cornerstone of a structure which is by no means complete. It is still unfinished.

Congress has added repeatedly to the original framework, and additional proposals for changes are expected this year.

WHAT SOCIAL SECURITY DID

Whatever its shortcomings, the social security act towers as the most important single piece of social legislation enacted in American history.

This is what it did:

1. It said that the National Government had some responsibility for the relief of individual suffering. The countrywide depression had proved that each man could not always look after himself and his family if he just worked hard enough and behaved himself.

2. It authorized the Federal Government to establish a compulsory old age and survivors' insurance program (OASI) under which employers and workers would be taxed. When a worker died or retired at 65, benefits would be paid out of the trust fund to him or his survivors to replace part of the earnings the family had lost. (Recently, benefits also have been made available for persons over 50 retired by disability.)

3. It provided for Federal grants of money to States to share the cost of public assistance to the needy blind, aged, and dependent children. It said that records should be confidential and that grants to these persons should be made monthly and in cash, not in commodities as had been typical in relief programs. (Aid to the totally and perma-

nently disabled joined the other three categories later.)

4. It encouraged State unemployment compensation plans modeled along the lines of the only system then in operation—Wisconsin's.

5. It increased Federal funds for maternal and child health, crippled children, and child welfare.

Four Wisconsin men

For this monumental concept, four Wisconsin men may claim major credit. The theoretical basis for such social action had been debated in the University of Wisconsin classroom of Prof. John R. Commons, world famed labor economist, in the early 1920's. Edwin E. Witte, the father of social security, and Arthur J. Altmeyer, its first administrator who was dubbed Mr. Social Security, were proteges of Professor Commons. Wilbur J. Cohen was a pupil and aid to Witte at the Madison campus.

Return in imagination now to the United States of 25 years ago. The central fact was that two out of every nine workers were unemployed. Many of those with jobs worked only part time. The average weekly wage in manufacturing was $18.40. Welfare resources were few. Steps were being undertaken to haul the Nation out of its worst depression.

On June 8, 1934, President Roosevelt told Congress that "among our objectives, I place the security of the men, women and children of the Nation first." He expressed his belief in social insurance financed by compulsory contributions.

Three weeks later he appointed a committee on economic security, headed by Secretary of Labor Frances Perkins, to draft a program.

PROF. WITTE CALLED "TOWER OF STRENGTH"

Wisconsin's Professor Witte was named executive director, and he took Cohen to Washington with him as research assistant. Altmeyer, then Second Assistant Secretary of Labor, became chairman of the technical board.

Witte, now 73 and living in Madison, was born in Jefferson County and graduated from the University of Wisconsin, where he also spent 46 years on the faculty. Professor Witte never was content inside an ivory tower. Before his social security assignment, he had been statistician and secretary for the State industrial commission and first director of the pioneer unemployment compensation program. As its chief, Witte had made the Wisconsin legislative reference library a model.

Miss Perkins, a renowned social worker with uncommon political and administrative skill, called Witte a "tower of strength, a miracle of intelligence, imagination and flexibility" as he directed the high powered 100-member committee in its enormous task.

Altmeyer, now 68 and also a Madison resident, was born in De Pere. After his graduation from the State university he became Professor Commons' assistant and later was statistician and secretary for the State industrial commission, where he started the Nation's first unemployment index.

Altmeyer's role

In 1933 Altmeyer became chief of the compliance division of the national recovery administration. After the committee on economic security concluded its work, Altmeyer nursed the newborn program to maturity as chairman of the social security board. He was later commissioner for social security. He was retired in 1953 by an Eisenhower administration reorganization. Succeeding him was another Wisconsin man, John W. Tramburg, former State welfare director.

For the "prodigious achievement" of launching the social security program on a smooth and efficient course, Altmeyer deserves major credit, according to Arthur Schlesinger, Jr., historian of the New Deal. He ran the biggest insurance business in the world, but was little known. Typically, Altmeyer himself once observed, "A successful administration is about as interesting as cold spinach."

MILWAUKEEAN COHEN NOW AT MICHIGAN

Cohen, now 46 and professor of public welfare administration at the University of Michigan, Ann Arbor, is a Milwaukee native who became a specialist in the theory and practice of social security here and abroad. After his job with the draft committee he became Altmeyer's personal assistant and technical adviser. When he resigned from Government service in 1956 he was director of research and statistics for the Social Security Administration. Dynamic and articulate, he contributes continuously to the thinking of social welfare circles on basic policy issues.

Social welfare, economics, and the law were not well prepared for the challenge and opportunity of writing social security legislation. There was no popular demand for it; people stil lare amazingly indifferent, considering that the annuities they are purchasing with 3 percent of their annual earnings (up to $4,800) may be worth $20,000 to $35,000 each.

Unemployment compensation aroused the most controversy within the committee. Because Wisconsin had the only working plan, and because this program had ardent supporters in strategic positions, the idea of separate, State administered funds to which employers would contribute (gaining tax rebates if they kept unemployment down) prevailed. The President also favored State plans because he believed they would sit better with Congress and not be challenged as unconstitutional. Many persons then, and more now, argue that this has resulted in a crazy-quilt pattern of uneven coverage, and that a national program would have been better.

EUROPEAN PLANS FIRST

The bulk of the truly radical social security proposals were agreed upon with surprisingly little fuss. There were no American blueprints, but most European nations had developed social insurance much earlier. The first plan was activated in Germany in the 1880's by the conservative Chancellor Otto von Bismarck.

The committee and the Congress might have gone much further than they did. Specifically, they might have included provision for medical care insurance—the hottest unsolved issue in the field now—with little argument. Sicknes costs were one of the first things the European systems had sought to protect against.

Miss Perkins, among others, objected to the employee contribution feature. She argued that the employer would shift his share to the consumer and that the worker, as consumer, would be paying both portions. President Roosevelt contended that the joint contribution gave workers a legal, moral, and political right to collect benefits.

"With those taxes in there," he is quoted by Schlesinger, "no damn politician can ever scrap my social security program."

BUSINESS WOULD DEMAND SYSTEM

Social security did not provoke the uproar that many other New Deal proposals did. But the opposition was bitter and mainly from the business world.

This is a puzzle to such persons as Arthur Larson, director of the Duke University world rule of law center and Republican Party philosopher, who wrote an expert handbook on social security.

"If the entire system were destroyed tomorrow," he said, "it would not be long before American business would have to demand its reinstatement. * * * For a 20th century, private enterprise, cash wage economy without an income maintenance mechanism is almost unthinkable. No such economy exists on earth today."

The first contributions to the social security reserve fund were collected from workers and their bosses in 1937. The first benefits were paid in 1940. The impact of the program is hard to exaggerate.

Paid out, $50.4 billion

Nine out of every ten working Americans are now protected by social security laws against some of the income loss which is a frightening risk of old age and unemployment, and with no loss of dignity or pride. (The major exceptions in coverage today are self-employed physicians, employees of Communist groups and certain migratory farm workers.)

At the end of 1959 almost 13,750,000 men, women, and children were drawing old-age insurance, survivors', and disability benefits averaging $80 a month. In 1959 the paid out benefits totaled $10,300 million. A total of $50,400 million has been paid since January 1940 to 21 million persons.

In Wisconsin last year more than 319,000 persons received benefits totaling more than $20 million a month. In Milwaukee County alone the recipients numbered more than 75,000 and their income from social security more than $5 million a month.

Unemployment compensation has paid out more than $24,500 million. In each of the three postwar recessions it has replaced between a fifth and a quarter of the resulting loss in wages.

Some 7 million aged, blind, or disabled persons and dependent children (17,420 in Milwaukee County) are drawing $3,500 million a year in public assistance grants, supplied by Federal, State, and local taxes.

This stream of cash has helped stabilize the economy and keep up the purchasing power of the persons who would be first out of the market in hard times. Social security has not, as some opponents feared it would, cut individual savings, insurance purchases, or investments.

IT HAS KEPT FAMILIES TOGETHER

It has encouraged retirement (although the average social security beneficiary retires at 69, not the permissible 65 for men and 62 for women) thus opening job opportunities for younger workers.

It has kept together families which formerly would have been scattered by adversity. Children, for example, no longer need to be placed in orphanages because of poverty. Thanks to social security survivors' benefits and aid to dependent children, mothers can rear their own children in spite of the loss of the father by death, desertion, or divorce.

It has vastly stimulated private pension plans and voluntary health insurance.

It has resulted in the establishment of comprehensive public welfare services in every State. Before the 1930's, needy persons had to rely on the grudging aid of local governments alone, plus the usually meager resources of private relief-giving agencies. In many places, whenever tax funds ran low, aid was withheld entirely.

AVERAGE BENEFIT NEAR $70 A MONTH

A chief criticism today is that benefits are pegged too low in relation to buying power. Public assistance, which was supposed to wither away as insurance coverage spread, is still a costly item. One-fourth of the recipients of social security benefits have no other cash income and need the extra help.

The average benefit to a retired or disabled worker or his survivors is $69.88 in Milwaukee County and $62.14 in Wisconsin. The lowest grant possible is $33 a month and the most an individual retired worker may collect now is $116. When recent liberalizations

have come into effect, the maximum will be $127.

In a recent analysis, Wilbur Cohen predicted that in the next 10 years social security benefits would be boosted by 40 to 50 percent and that some provision would be made for financing hospital, nursing, and other health services to the aged and disabled.

New England Facing Threat From Abroad

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article of importance to the New England area, which was written by John Harriman for the Boston Daily Globe of November 19, 1959.

The article follows:

NEW ENGLAND FACING THREAT FROM ABROAD—AREA MUST PUT UP FIGHT TO HOLD ITS INDUSTRIES—EVEN ELECTRONICS TO FEEL EUROPEAN COMPETITION

(By John Harriman)

Quite suddenly we in New England have been jolted out of the complacency of the last 3 or 4 years.

This complacency was born of mushrooming plants along route 128, and the conviction that in electronics and other new industries we were going to discover a new golden economic age.

But it appears that other corporations have been drifting away, offsetting in part at least the increase in new companies, and that, even in electronics, we shall have to put up a fight to hold what we have.

The political aspect of this State's industrial problem was put firmly on the line in yesterday's Globe by our political editor, John Harris. Some of its economic aspects were pointed out in yesterday's Wall Street Journal.

Today I want to suggest that our most serious competitor in the industries now important to this area may not be the South, which harried us in textiles, or California, which today is thought to hold our electronic industry under threat.

Instead, it may be Europe. For instance, it is interesting to note that Nicholoson File has closed its Providence plant, choosing to shut down that one out of the three it operated in this country, while it has recently opened a factory in Holland.

Raytheon redesigned its big ship radar not in Waltham, but in Rome, where it did the job thoroughly a third of the time and cost of doing it here.

Furthermore, as I reported from Italy a month ago, from Raytheon's new factory outside Palermo in Sicily, it can produce and land a microwave tube of a certain type in Boston, freight and duty paid, for roughly three-fourths of what it would cost to produce the same equipment here.

In the face of such facts, who can be sanguine about this large company's future plans for expansion * * * from the stand point of "where"?

We have here in New England, of course, one heavy anchor to windward in this matter. Much of our "new" industry produces defense products and is hence forced to operate in the United States. Then, too, our research facilities should keep up ahead in certain kinds of advanced engineering and development.

But no one likes to contemplate a regional economy based in large part solely on defense. And it is not research and development that move the assembly lines that mean jobs and money in a region's pocketbook. It is production, and production in many (although by no means all) lines is cheaper in Europe than in the United States today.

This threat to domestic industry is not unique to this area; it is something that much of industry in many places is going to face in the next few years.

But the threat may be more immediate here, and more acutely felt in its result than in other areas. This is not to say that we face a migration of industry such as closed so much of our textile production. But an erosion of production here of even modest proportion would occur in an economy already scaled down and somewhat weakened by our past experience in textiles. It would be an occurrence unfortunate and debilitating in psychological as well as in economic effect.

Dillon Plan

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. JAVITS. Mr. President, a few weeks ago, the Under Secretary of State, Douglas Dillon, represented the U.S. Government in negotiations on a rationalization and liberalization of trade among the nations of the free world and partnership aid to the free world's newly developing areas. His outstanding leadership set in motion the forces which hopefully will lead to a bridging of the gap between the European Common Market countries and the European free trade area, known as the Outer Seven. An evaluation of the Dillon plan was published in the Christian Science Monitor, January 30, written by Nate White, business and financial editor of the Monitor. This plan had its genesis in the work of the NATO Parliamentary Economic Committee of which I am chairman. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TREND OF ECONOMY—VIEW FROM A PROMONTORY

(By Nate White)

BOSTON.—It isn't often that the world needs a Marshall plan—an economic plan to put together the bits and pieces after the catastrophe of world war. But the world is in constant need of the kind of leaders who launched the Marshall plan.

Three men stood on a promontory in 1946 and 1947 and surveyed the bits and pieces. The late George C. Marshall, then U.S. Secretary of State, the late Senator Arthur Vandenberg, and Paul G. Hoffman saw the pieces. They knew, as Mr. Hoffman so often has said in the words used to this reporter in 1947, that "if we in the United States do not pick up the pieces, the Russians will."

These men, plus the little-identified Joe Jones in the State Department, plus the political leaders in of the times, President Truman in the White House, and supporters of Senator Vandenberg in the Congress, blueprinted, engineered, and constructed the prosperous world of today.

It was an almost incredible achievement. If they had not stood on the promontory it would never have come about.

Few observers today are on a sufficiently high promontory to detect the mighty floodtides of economic movements which are in full flow. The daily business of the world, of governments, of financial and industrial affairs, of households tends to bog even the most alert men and women in the complications of dailiness when they should be watching the direction and significance of the forces of human activity.

Who is on the Promontory? Paul G. Hoffman is still there. As Chairman of the United Nations Special Fund for Assisting Underdeveloped Nations, he is a strategic spot to observe the tides.

Sir Oliver Franks, Chairman of Lloyds Bank, Ltd., and formerly British Ambassador to the United States, is on the promontory. And it looks as though he and Mr. Hoffman have been joined by U.S. Under Secretary of State Douglas Dillon.

What do they see?

They see peoples everywhere in large economic movements. The tides of the world are shifting. Even the economic poles are in motion.

In a memorable, unpublicized address last November before the trustees of the Committee for Economic Development, Sir Oliver set forth the economic world as he sees it. This address has now been published by the Saturday Review in its January 16 issue. It could reach the altitude of Secretary Marshall's famous Harvard University address of June 1947. In the same issue Mr. Hoffman tells of the challenge as he sees it today.

The tides are flowing not only east and west but north and south. How they flow in each direction and what happens in the diffusion of the eddies; these are the movements which concern Sir Oliver, Mr. Hoffman, and Mr. Dillon.

"If 12 years ago (1947) the balance of the world turned on the recovery of western Europe, now it turns on a right relationship of the industrial north of the globe to the developing south," Sir Oliver told us. "There is a second consideration. If we in the Western World, in North America and in Europe, are to succeed in two dimensions, northsouth as well as eastwest, then it is essential that our economic strength be adequate to our tasks. This means a more consciously dynamic view of growth in our communities than we have perhaps had before."

Sir Oliver went on to discuss a Europe and Britain at sixes and sevens referring to the rivalry in Europe which seems to exist in the European Economic Community (the six) and the European Free Trade Association (the seven).

What he proposed was a kind of informal new arrangement which would bring the United States and Canada into the economic trading world of Europe.

Here is where Mr. Dillon's work seems to be paying off. In his recent visit with chiefs of state and economic ministers of the six and the seven he seems to have built the practical bridge between the two European groups themselves and a second bridge between them and the United States and Canada.

The bridges may now be only of the temporary pontoon variety, still subject to structural changes. But the caissons for a strong superstructure probably have been sunk, Time will tell.

In setting the goals of today, Mr. Hoffman put it this way: "I suggest that the kind and scale of economic growth we need and seek are at the frontiers of world poverty.

I suggest that this requires partnership in effort and in investment."

And a final word from Sir Oliver: "I do not understate when I say that the world balance will shift decisively against us if we fail to devise adequate means to realize the twin objectives I have identified."

Comment: the world is too small and the issues too great to lose time in a revival of an international trade war between the nations of the free West. The rest of the world is in movement and the free nations of the north have a job to do if they are to include the developing nations of the south in freedom's tides.

With Accent on the Deliberate

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 20, 1960

Mr. BUDGE. Mr. Speaker, there follows an editorial from the Idaho Statesman published in Boise, Idaho, under date of January 30, 1960. I sincerely hope the U.S. Senate proceeds in accordance with the suggestions of the Statesman and particularly the last sentence of the editorial:

WITH ACCENT ON THE DELIBERATE

Latest in a group of distinguished Americans all testifying to the same effect, Secretary of State Christian Herter and Attorney General William P. Rogers are urging U.S. acceptance, without reservations, of the compulsory jurisdiction of the United Nations International Court of Justice in all disputes involving other countries.

They're putting their argument on the high grounds that the rule of law should be supreme throughout the world. Unhappily in the present phase of civilization's development, it's a basis that's more idealistic than practical.

The argument would be more impressive if there were actually in existence a recognized and comprehensive body of international law. But there isn't. As compared with national law, international law, which Webster defines as "a body of rules which modern civilized nations regard as binding them in their mutual intercourse," is still in its infancy. Its formation is a developing process to which Great Britain and the United States so far have made by far the most substantial contribution. Again quoting Webster: "The doctrines of international law have been elaborated by a course of legal reasoning and are mainly based in the practices of Great Britain and the United States, on the customs and usages of civilized nations, treaties, acts of executives in international matters, statutes and judicial decisions, especially in prize courts. In European continental countries opinions of text writers are also received as law to greater or less extent, but in British and American practice they are only evidence of what the law is."

It's pretty evident, then, under these circumstances, that the World Court will be making up international law as it goes along dealing with whatever disputes may be brought before it.

In this situation, the composition of the Court, must be deserving of attention perhaps even more serious just now than its functions and power. The salient facts are these:

This international court has 15 judges, elected for 9-year terms of $21,000 tax-free salary by majority vote of the U.N. general assembly and security council. No nation may have more than one judge. A quorum of nine judges suffices to constitute the Court. All questions are decided by a majority of the judges present.

The United States has one member. The Soviet bloc has two (from Russia and Poland). The remainder are from European, Latin American and Asiatic countries.

In view of the evident inadequacy of existing international law to provide basis for all the decisions this court might be called upon to make, and because of the probability that these magistrates would necessarily improvise bases for their rulings, it must be apparent that this tribunal, in some instances, must function more in the capacity of a jury than of a court of law.

It is to be observed that, as a practical matter, no attorney ever enters upon a jury trial of a lawsuit without searching examination of the members of the jury.

The Soviet Union quite frankly takes that position. It has declared that it will not allow itself to be bound by decisions of an international organization which could not be vetoed so long as a majority of states, or judges in the case of a court, represented a political philosophy different from its own. No Soviet bloc country has accepted the compulsory jurisdiction of this world court even with reservations.

The United States has gone a good deal further. It has pledged its readiness to accept the jurisdiction and decisions of the world court, except in matters which it might itself decide are purely domestic affairs, such, for instance, as immigration, tariffs, or matters relating to the Panama Canal.

This is the reservation set forth in what is known as the Connally amendment which the Senate in 1946 attached to a treaty accepting the jurisdiction of the world court. And it is this amendment which Mr. Herter, Mr. Rogers, and the others are urging the Senate to repeal.

Obviously, their argument poses a matter of grave concern. Were they to prevail in their contentions, thus country, a recognized leader in this advancement, would be the first to let go all holds and plunge headlong into deep and untried waters with consequences that could be disastrous to the high cause of world rule by law. Imagine, for instance, the widely disillusioning and devastating consequences of the issuance of a world court order which country could not, with honor and in justice, accept.

Ordinary prudence, as well as genuine concern for worldwide welfare, demands that this proposal, and all its implications, be examined with utmost care. The course proposed my indeed be one to be pursued with all deliberate speed," but it must be with accent on the "deliberate."

Kiwanis Distinguished Service Award to A. Mose Siskin and Garrison Siskin

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, February 2, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the 1959 Kiwanis service award presentation. This year recipients are my very good friends Mose and Garrison Siskin, two brothers who not only have made a tremendous success of their own lives, but have, through their generosity and graciousness, enabled so many others to achieve something beyond that to which they would have normally aspired. They have accomplished this good work with a deep sense of humility, unselfishness and an abundance of love for their fellowman. This high honor which is not given lightly is richly deserved by Mose and Garrison Siskin, and I join with their countless friends in wishing for them many more years of success in their endeavors.

I am informed by the Public Printer that this manuscript is estimated to make 2⅔ pages of the CONGRESSIONAL RECORD, at a cost of $216. I ask unanimous consent that it be printed in the RECORD notwithstanding.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

NINETEEN HUNDRED AND FIFTY-NINE KIWANIS SERVICE AWARD PRESENTATION—A. MOSE SISKIN AND GARRISON SISKIN, JANUARY 19, 1960

INVOCATION BY RABBI HARRIS SWIFT

Heavenly Father. We lift up our grateful hearts unto Thee, and we supplicate Thee to bless all assembled here and to reward with Thy choicest gifts the officers and members of the Chattanooga Kiwanis Club.

We thank Thee for the food of which we shall partake, which makes us mindful of the many who are not so fortunate. We offer Thee our gratitude for the wholeness of our bodies, mindful that there are many whose physical needs are great. We express our appreciation for the blessings of happy home lives, well knowing that there are many in our community whose lives are saddened, homes that are broken and devoid of fellowship and love.

Eternal God and Father. We thank Thee for the precious gift of years Thou has given our friends, Mose and Garrison Siskin, whom we are honoring this day. May the awareness of dedicating their lives to the task of human rehabilitation and the knowledge of making a significant contribution to human welfare give them the satisfaction that comes from a sense of self-fulfillment. Grant them, we pray Thee, many more years in which to continue their humanitarian endeavors. May they ever serve as an inspiring and stimulating example to all of us assembled here to do them honor. Bless, we pray Thee, their faithful and devoted life partners and their children; and crown them and all their dear ones with Thy favor.

Merciful God. By Thine inscrutable will Thou hast seen fit to smite some of Thy children. May it be Thy will to increase our capacity for sympathy and understanding that we may be feet to the lame and eyes to the blind, and be ever ready to give food to the body, wisdom to the mind and skill to the hand. Our love of Thee can only be reflected in the love of our fellowmen. May we be inspired to that love, constantly and generously.

Blessed art Thou, O Lord our God, who feedest us with Thy goodness. Amen.

KIWANIS SERVICE AWARD ADDRESS PRESENTED BY DR. WM. G. WEST, JANUARY 19, 1960

The Kiwanis Club of Chattanooga has made its distinguished service award to three brothers: Thomas S. McCallie, Spencer J. McCallie, and J. Park McCallie; but this is the first time the award has been made

jointly to brothers. These brothers, Mose and Garrison Siskin, have demonstrated in an extraordinary manner that it is possible for brothers to work together in a unique and harmonious way. They are one and inseparable in their family relationships, their business enterprises and their generous philanthropy.

These brothers were born in Chattanooga—Mose in 1900 and Garrison in 1903. They are the sons of Anna and Robert H. Siskin, both of whom came to Chattanooga from Russia in 1890. Mose and Garrison received their education in the public schools of Chattanooga. But much of their early education was received from their immigrant parents, who settled on the west side of our city to carve out the future in their new land, overcoming language difficulties, poverty and strange customs with initiative, resourcefulness, enterprise, thrift, and hard work. What the Siskins achieved could have happened neither in Czarist Russia nor even less in present-day Communist Russia.

Their father was a peddler and the boys began selling newspapers on the streets of Chattanooga when Mose was six. When the father went to work for a scrap dealer, the boys assisted him by collecting scrap metal from families in the neighborhood. In 1910, with a capital of $6 and a rented lot at the corner of 19th and Chestnut Streets, the father entered the scrap metal business which became the forerunner of the now flourishing steel business of Siskin Steel & Supply Co., one of the largest businesses of its kind in the South.

At one time a streetcar served as an office for the business. Twenty-nine years ago the office was a 12 x 20 foot 1-story structure comprising 240 square feet. Today the Siskin enterprises occupy 40,000 square feet of office space. They are the Republic Steel Co's. seventh largest customer in the United States. It is no secret among insurance men that an advertisement in a national magazine has noted that the Siskin brothers are insured for $4½ million between them. Much of this insurance will be used to perpetuate their good works in the Siskin Memorial Foundation, but it is a badge of not only material success, but character, also.

Not just anyone can get that much insurance, even if he can pay the premiums. Their parents literally had nothing in the beginning; these brothers became successful and today could be wealthy in a material way if they had made wealth and not helping people their primary goal in life. They could not have achieved their good works, though, if they had not been successful in an almost American Horatio Alger bound to rise tradition.

These brothers are inseparable from one another, but they are also bound together in strong family ties.

Mose is married to the former Eva Witt of Columbus, Ga., and has two children, Claire Ethel Binder, wife of Dr. Samuel Binder of Chattanooga, and Robert H. Siskin, a student at McCallie School. They have two grandchildren.

Garrison is married to the former Goldie Temerson of Tuscaloosa and Birmingham, Ala. They have two children, Anita Levine, wife of Lawrence D. Levine of Chattanooga, and Helen S. Pregulman, who is married to our own Kiwanian Mervin Pregulman, who is known among Chattanooga sports fans as a former All-American football player at the University of Michigan and a star footballer with the Green Bay Packers. The Garrison Siskins have five grandchildren.

Both Mose and Garrison are family men. They are devoted to each other and to each other's families. Garrison once stated: "We couldn't do these things for others without the cooperation of our wives."

One day Mose, in recalling the example of his parents, stated: "Your parents give you an example to live by; when you see harmony and family love in the home, you learn to do right, too."

"From my mother," stated Garrison, "we learned to mind our own business and not to engage in gossip which she taught us was one of a person's worst faults. And my father taught me that a good name was something that you can't buy."

Both brothers are proud of the fact that they have inherited a cigar box from their father into which good deeds money can be put and withdrawn without accounting to each other. To this date, they have done millions of dollars of business with Republic Steel Co. and Combustion Engineering without written contracts. Perhaps 95 percent of their business is done without signed contracts. They apparently use them only when the Government rules in certain contracts that they must. "Our word," states Garrison Siskin, "is our bond."

When Garrison graduated from city high school, the Dynamo carried this quotation under his senior class picture: "Never idle a moment, but thrifty and thoughtful of others." He won a scholarship to Syracuse University but never used it because he did not have the train fare to get to New York.

He and Mose went to work. They worked long, hard hours. They still do. They became successful; but if this were all, our story would never be told today.

In 1942 while traveling to New York, Garrison Siskin, after stretching his legs at Johnson City, Tenn., was reboarding the train at night when the steel grid which covered the staircase fell heavily and sharply against his right leg. The force of the 50-pound steel grid threw him violently against the train and his right leg was severely injured. Hot wet towels were applied to his leg, but at the next station it was discovered that this was the worst possible treatment. A clot had formed; the circulation was gravely impaired and his life was endangered. One of the surgeons told him that only a miracle could save him.

Garrison remembered how his own father had complained of a clot in his right leg 14 years before and how a few days later he died. The story of how Garrison promised his Maker that if he ever recovered he would henceforth devote his time, energy, and financial resources to the welfare of humanity is a classic one, which has been told in Guideposts edited by Norman Vincent Peale. He became a changed man. In his own words, he dedicated himself "to help those who cannot help themselves." Unlike some men who make promises when they are ill, and do not fulfill them, Garrison Siskin has kept the promise which he made to his Maker on that night in 1942.

In the 19 years since that accident, Mose and Garrison Siskin have teamed together to fulfill what became Mose's compact, too. Their good deeds would fill a thick book.

They are active members of the Industrial Committee of 100 and have played a significant part in influencing the expansion of the Combustion Engineering Co. They have also played a big role in getting the General Electric Corp. to locate several of their plants in this section of the country. They were instrumental in having the TAG Railway buy large acreage of land to attract additional plants to locate in our metropolitan area. They offered the Crane Co. a hugh tract of land for $1; and though Crane did not locate their new plant here, such cooperation reveals their keen interest in Chattanooga's industrial development.

Here is a list of the organization both serve: The Tennessee Governor's Committee on Employment of the Handicapped, the Chattanooga Big Brothers Association, Abilities, Inc. of Tennessee (formerly Disabled Enterprises), the Chattanooga-Hamilton County Speech and Hearing Center, the American Cancer Society, the Orange Grove School (honorary), United Cerebral Palsy Association of Hamilton County, the Cumberland Youth Foundation.

In addition, Mose Siskin is a member of the Patrons Association—McCallie School.

Garrison Siskin is also on: the President's Committee on Employment of the Physically Handicapped; Big Brothers of America (board of directors, executive committee, and honorary president of national organization) which handles more than 700,000 cases of delinquent boys annually; Brandeis University, adviser to president; chairman of the board, Tennessee, Alabama & Georgia Railway; and Abilities, Inc., of New York.

These brothers have established the Mose and Garrison Siskin Memorial Foundation which is dedicated to high religious, social welfare and humanitarian ideals. This foundation will go on blessing humanity after they are gone; and if any person of means wants to live on in a well-planned work, I can think of no better work to which he can give a sizable gift.

They have built the Siskin Memorial Building on Vine Street which is used by people of all creeds. In this building are located offices for several welfare organizations, a large assembly hall, and also a remarkable museum of religious antiquities which includes rare sacred volumes and art objects representing many religious faiths. A remarkable cultural asset to our city, a Harvard professor stated that it would be a cultural shrine if it were located in London or New York City.

A new finely equipped building costing more than $1 million has been recently completed on Oak Street which is devoted to expressing one of our Kiwanis objectives for 1959: helping handicapped citizens. Here come the blind, the crippled, the deaf, those with speech difficulties and those who need dental care. Our own Kiwanian "Coach" Rike will soon be receiving speech help here following a laryngeotomy. Already, this building, and more importantly its program has attracted nationwide attention. The Siskins are financing a program of help to the handicapped and have given as much attention to getting highly trained personnel as they have given to furnishing a fine building. When William Clay Ford, national campaign chairman of the United Cerebral Palsy Association for 1960, visited these facilities on November 19, 1959, he exclaimed:

"Wonderful, just wonderful. I couldn't be more impressed. I have not seen anything like it anywhere. Chattanooga should be very proud of the Siskins and the facilities they have provided for the handicapped. I wish there were more such facilities around the country and I wish there were more men like the Siskins."

The $2 million center now provides free headquarters for the Chattanooga Big Brothers Association, the Adult Education Council, the Hamilton County Chapter of the Muscular Dystrophy Association of America, the Association for the Blind, the Cerebral Palsy Association, the Association for the Mentally Retarded, the local chapter of the Literacy Movement in the Southeast, the Dental Clinic for the Handicapped. Of the latter, our own Kiwanian, Dr. Charles Scott, has stated it is the "best dental clinic in the Nation, with the latest and most ultra-automatic equipment and the finest supplies which can be purchased today."

The Siskins brothers have given steel ramps to hospitals, the Old Ladies Home, many churches, private homes and needy folk, and to the Memorial Auditorium.

They donated an iron lung to Erlanger Hospital at a time when they were hard to secure. They equipped the gift shop at Memorial Hospital and have given many other materials to both Erlanger and Memorial Hospitals.

They gave the steel and other materials for the Field House at Warner Park and helped Kiwanian John Martin complete the job on time for the Billy Graham meeting. Dr. Billy Graham has awarded his special Bible to only three persons: one he gave to President Eisenhower and the other two he gave to Mose and to Garrison Siskin.

These humanitarian-minded citizens have given steel, as well as money, to churches of all denomination, large and small, white and colored.

When the gymnasium of Our Lady of Perpetual Help Roman Catholic Church and School burned down they gave steel and their time to rebuild this gymnasium.

They have given substantial amounts of money to schools and colleges throughout this area.

They are large contributors to the Opera Association, the Community Concerts, the United Fund, the Chattanooga Jewish Welfare Federation, the Art Fund, and the Cancer Fund, to name only a few.

The Siskin brothers bore a large part of the cost of remodeling the Orange Grove School, an institution which offers hope for the future of children who are mentally retarded. They built the new classroom wing and the sheltered workshop unit for this school.

This team of brothers built new and large quarters for Abilities, Inc., of Tennessee (formerly Disabled Enterprises) which provides lifegiving work opportunities for the disabled. They have provided a large number of disabled persons with wheelchairs free of charge.

They have been regular and substantial contributors to the work of the Paraplegia Foundation which offers independence and a productive life to persons suffering from this dreaded and crippling ailment. When a citizen once objected that a prospective employee had no voice, Garrison Siskin replied: "He still has to eat." The Governor of Tennessee in 1958 gave these stalwart brothers a special citation praising them for their many-sided efforts in the rehabilitation of handicapped persons.

One of the most heart-warming stories in any business in this country, large or small, in my judgment, is the stirring story of their employment of a large number of handicapped personnel, ex-alcoholics, persons with prison records, people who have been paroled to them from courts in Chattanooga, down and outers, the beaten, and the downtrodden. The Siskin Steel & Supply Co. alone employs 150 persons, one-half of whom are persons in the category of the helpless and the hopeless. Many of these persons had no active church connections; the Siskins always encourage them to become active members of the church of their choice.

Here is the classic story of Joyce Rominger. Blind from birth, she later trained in Minneapolis to become a Braille switchboard operator. But when she returned to Chattanooga there was no Braille switchboard. There were only three in the country. Industries stated that they were too expensive to install. The Siskins heard of her problem. In 29 weeks the telephone company had built and installed the proper equipment which was described in Popular Mechanics of January 1959. Joyce's first words to the Governor of Tennessee were these: "This is the happiest day of my life." She is still happy as she operates 14 incoming lines, 4 long-distance lines, 14 stations, and handles an average of 1,000 daily calls. She is a symbol of dozens of people whose story I know and could tell, if there were time.

The Siskin brothers have helped the Republic Steel Co. to set up a program to employ the physically handicapped.

To those who know these stories of how these good men give their time, their experience, their advice, their encouragement, and their selves to help those who need help, it is not an occasion for wonder that on November 9, 1959, the announcement was made that the Distinguished Service Award of the President's Committee on Employment of the Physically Handicapped was made to Mose and Garrison Siskin for meritorious service on a national scope in the interest of the handicapped.

Time would fail me to tell you of a Texas couple, injured in an automobile accident, whose hospital and travel expenses were paid by the Siskins; of the long correspondence with the president of the Atlantic Coast Line Railroad to arrange for a father's transfer to North Carolina to be near his sick boy; of a girl who was sent to Mayo; of a boy who was sent by these good men to a prominent medical specialist in New York. These stories are legion, but they all carry out in bold outline the Kiwanis motto of 1959, "Build Individual Responsibility."

Much of their good work in bringing sight to the blind, liberty to those in prison, making the lame to walk, the speechless to talk, the handicapped to have self-respect and dignity of life is unknown. Therefore, only the recording angel has a record of it. Instances of helping people have been so numerous and their work on behalf of human beings so all-encompassing even the recording angel must have difficulty keeping up with it. It fulfills the injunction of Micah on what God requires for the good man; and what Jesus of Nazareth, whom 600 million call Lord, announced as a significant part of His program at the beginning of His ministry: to preach good news to the poor, release to the captives, and recovering of sight to the blind.

Down at the office when I saw these men busily answering telephones before Christmas, I asked Mervin Pregulman how they kept going. I remember his reply, "They get joy out of their work and out of helping people."

"My religion," states Garrison Siskin, "is in treating people right. The Lord has been good to me and I try to do the best I can for other people. Some people invest in stocks and bonds, Mose and I invest in people. Our dividends come from the people we help."

It hasn't always been easy. One of the half-serious mottoes in their conference room is this one, "I consider the day a total loss if I don't catch hell about something." Even we clergymen can appreciate that statement. But today infamous and ominous swastikas are appearing in various parts of the world. These brothers are members of a minority religious faith in Chattanooga and in America. Never once have I heard them complain about bitter prejudice we know sometimes exists, even in our beloved land of the free. They have big hearts—and would help anybody, regardless of creed or color. Grossinger's ad in the New York Times of August 30, 1959, is right—"Their aid is a golden sermon."

When the children of a classroom in Barger School wrote notes of appreciation for the building they erected for handicapped people, Garrison's granddaughter summed up the reaction of the children in her salutation and complimentary closing:

"Dear Daddy Garry and Uncle Mose," she began, and closed: "Your friend, Mindy."

They have indeed been friends to those who have needed the benediction of friendship.

On the walls of the Siskin Memorial Building is an eloquent message which expresses gratitude no one can purchase with money alone:

"IN APPRECIATION

"Some could give land, but we have none; others would give wealth, but we have so little; yet we present from our hearts, what no man can buy: Our deepest love. For the opportunity of education for ourselves and the many handicapped children who will follow us.

"To Garrison and Mose Siskin.

"Chattanooga, Tenn., September 1, 1956.

"CHILDREN FROM THE SCHOOL OF CHATTANOOGA-HAMILTON COUNTY SPEECH AND HEARING CENTER."

All who know these brothers who are princes in the household of Israel will applaud the mercy and loving kindness of their labor and benevolence. All wish that the prophecy written 2 years ago by Mr. Bernard Baruch, distinguished American citizen and advisor to many Presidents of the United States, will be fulfilled in long life for these greathearted citizens. He inscribed on a copy of "My Own Story" these words:

"To Garrison Siskin who is making life useful and bearable for the disabled and the unfortunate with high hopes for his success. I envy him his age, for he has time to finish his noble task.

"B. M. BARUCH.

"JANUARY 1958."

These are men of service and theirs are honored names we add today to the list of outstanding and distinguished Chattanoogans who have received the Kiwanis Service Award.

And now to you, Mose Siskin and Garrison Siskin, I want to express the appreciation of our Kiwanis Club for your generosity and goodness to so many people in Chattanooga. I now have the honor, on behalf of my fellow members, to present to you first, an honorary membership in the Chattanooga Kiwanis Club, and secondly, to each of you a silver bowl which is a symbol of the highest honor we can bestow on any of our citizens. You will find inscribed thereon:

"Kiwanis Club of Chattanooga 1959 Service Award to A. Mose and Garrison Siskin who have helped the blind to see, the lame to walk, the afflicted, the handicapped, and the despondent to new hope and better life. This award is made for outstanding service to their fellow men."

ACCEPTANCE REMARKS: 1959 KIWANIS SERVICE AWARD PRESENTATION, GARRISON SISKIN, SPEAKING BOTH FOR HIMSELF AND FOR A. MOSE SISKIN, JANUARY 19, 1960

Mr. President, Dr. West, Mr. Carriger, honored guests, ladies, and gentlemen, with hearts filled with gratitude, my brother Mose and I thank you most sincerely for the honor which the Kiwanis Service Award bestows upon us and for the tributes which you have paid to us. We are deeply conscious of the privilege of being singled out of the many citizens of this city to receive the presentation for service made by one of our foremost civic clubs.

To us, the award and your kind and eloquent words—this presentation function and your presence—come as encouragement and inspiration and will provide us with joyous memories and the happiest personal recollections. Your kindness to us expresses so much the sentiments we humbly feel, and we are the more grateful for it, for we take it as symbol of brotherhood and of man's feeling for fellow man. And, just as it is for us a source of inspiring encouragement, we pray, with humility, that what we have done may, more than all else, invoke the blessings of fraternity and peace upon us all.

"The crest and crowning of all good,
Life's final star, is brotherhood;
For it will bring again to earth
Her long-lost poesy and mirth;
Will send new light on every face,
A kingly power upon the race."

It is in that spirit that we thank the Kiwanis Club, and as citizens, grasps the opportunity to pay tribute to this club which is doing so much public-spirited work in the alleviation of human need and in the raising of human standards. In our beloved land, synonymous with freedom, Mose and I pay tribute to the Kiwanis and its members for:

"* * * True freedom is to share
All the chains our brothers wear,
And, with heart and hand, to be
Earnest to make others free."

To you, Mr. President; to you, Dr. West; to you Mr. Carriger; and to you, honored guests, ladies and gentlemen, from us both come our heartfelt thanks and our deepest gratitude.

Don't Sell America Short

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. MACK of Washington. Mr. Speaker, an interesting news dispatch from Moscow, Russia, appeared on the front page of the New York Times recently.

This Russian dispatch said that the Soviet Government had given an unnamed U.S. automobile dealer a franchise for the distribution during the next 2 years of 10,000 Russian-manufactured Moskvich automobiles. The Moskvich is a four-cylinder, four-passenger car that sells in Russia for 25,000 rubles—$6,250. If anything like that price is asked for the Moskvich in the United States, it probably will obtain few buyers here.

The Times Moscow dispatch went on to say that the Moskvich factory is now producing 70,000 cars a year and that this production represents more than half of all the passenger automobiles produced in Russia. In short, Russia's present production of passenger automobiles, according to the Times dispatch, is less than 140,000 cars a year. American automobile factories, with an annual production of more than 6 million cars, are producing as many passenger automobiles in 48 hours as Russia produced in an entire year.

Many engineers are required to design and constantly improve American automobiles and to invent the many parts that go into them. It requires many more engineers to invent, design, and produce the great variety of machine tools necessary to manufacture the 6 million American cars a year and the parts that go into them. Great numbers of other engineers and chemists also are needed to design and build the highways on which these automobiles operate and the highgrade fuels that assure their efficient operation. Multitudes of mechanics are needed to keep the Nation's present 60 million automobiles in repair and in operation.

The automotive industry and its allied industries are not the only ones in which the United States is ahead of the Russians in the production of peacetime goods. We outproduce them manyfold in radios, television sets, telephones, in electrical goods of all kinds and in housing and the manufacture and use of modern farm tools and machines of all kinds. All of these industries require engineers, inventors, and scientists to maintain them at peak production and to ever expand the production of peacetime consumer goods for the American people.

Comparatively, Russia employs few engineers, inventors, scientists, and chemists in these peacetime fields. She employs most of her engineers, scientists, and technicians in war efforts. In this field Russia from time to time makes some spectacular achievements.

These few spectacular achievements, however, do not justify claims of political orators and writers that are heard and read from time to time that Russia has more and better engineers, more and better scientists, and a better educational system than the United States.

The vast numbers of American scientists, engineers, and inventors engaged in producing civilian goods are not lost to the American defense effort. In World War II and again in the Korean war it was demonstrated that plants and the skilled manpower of engineers, chemists, and inventors engaged in peacetime production could be quickly and effectively diverted and transferred to defense efforts when and wherever necessary. In World War I the United States in the making of defense weapons not only equipped its own millions of fighting men but also supplied a large part of the weapons, planes, tanks, and other fighting equipment used by our allies.

A few spectacular achievements by the Russians is no reason for anyone to sell America short.

Featherbedding on the Railroads?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Featherbedding on the Railroads?" written by Benjamin L. Masse and published in the January 2, 1960, issue of America, the National Catholic Weekly Review. The article is well worth reading by all Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEATHERBEDDING ON THE RAILROADS?
(By Benjamin L. Masse)

Over a lifetime of more than a half-century, I remember many trains. As a boy in my native Wisconsin, I often watched the St. Paul passenger trains as they swept gracefully around a gentle bend in the Fox River and headed for the old Green Bay depot on South Washington Street. I remember well the Alton between Chicago and St. Louis, and the Wabash as well, and how I used to argue, with nothing more than a vague impression to go on, that the Alton had the better roadbed and offered the smoother ride. I saw the first silvery Union Pacific streamliner, which shortened the tedious trip between Chicago and Denver, and in later years, after management had retired it to the Kansas City-Manhattan run, I rode on it a number of times.

FAMOUS TRAINS OF YORE

I remember, too, many of the other storied trains of U.S. railroading: the Rock Island Rockets, the Burlington Zephyrs, the New York Central's Commodore Vanderbilt—one of my favorites—the Pennsy's Broadway Limited, the B & O's Royal Blue and the diverting ferryboat ride across the Hudson to board it in Jersey City. And will I ever forget that plodding Louisville & Nashville train that carried me one brisk spring day from Louisville, I think it was, to Cincinnati? It was only through a miracle of God that I did not suffocate from the musty, billowing heat. (Why is it that so many trains, and buses, too, for that matter, are oberheated from October 1 to, roughly, May 15? Isn't there some way, once the vehicle starts, of regulating or turning off the heat?)

At any rate, it will be obvious to the reader that like most American boys I was early touched by the romance of the Iron Horse and never really got over it. If I never ambitioned sitting in the engineer's cab, or swinging recklessly with a brakeman's lantern from the end of a swaying freight train, it was because I had previously decided to become a big-league ball player. Believe me, it was for no lack of admiration for railroad men, or attraction for the glamorous lives they led. I can still recall how highly railroad men were respected in our quiet community—it was only later that the "Packers" put the town on the map—and how many of them owned their own homes. After working on the railroad all the livelong day, as the song says, it didn't take them long at night to wash up, change clothes and, in the summertime, sit sedately with their wives on their front porches like respectable middle-class citizens. (Note to the reader: there is some gentle irony here.)

Now, alas, it seems that all this glamour and respectability cloaked a grasping and shiftless spirit. As the years went on, I had learned, of course, that railroadmen were, after all, human, and that their overalls covered hearts even like yours and mine. They were not above taking a "5" for a relaxing smoke, or talking too long at the station with the hangers-on and making the train 10 or 15 minutes late. But then by that time I had also come to know that even bankers and businessmen had little ways of relieving the monotony of toil; and that only machines never became tired, never had heavy heads and tired hands and upset stomachs. What I was not prepared to hear was that railroaders as a group, or rather, the one-fourth of them who operate the trains, were just a bunch of featherbedders; that they worked on the railroad all right, but not by any means all the livelong day; that, in short, they not only accepted pay for work not done but insisted that the outmoded rules which consecrated this vicious featherbedding remain inviolate.

This required some looking into, since a man doesn't jettison his romantic illusions easily. Had I been less impetuous, I could, of course, have found confirmation of my shattered dreams in the daily press. But I did not know then that the Association of American Railroads was to stigmatize the tarnished knights of the shining rails in a series of full-page advertisements in newspapers throughout the land. So I asked the AAR to please be so kind as to send me the indictment of their shiftless employees,

sparing nothing of the truth, no matter how disillusioning. After all, I was a big boy now and ought to be able to take it.

Not to keep the reader in suspense, the bill of particulars eventually arrived, and that was how it came about that one evening I read from beginning to end the famous speech which Daniel P. Loomis delivered in St. Louis last February before the National Association of Shippers Advisory Boards. I don't know what the shippers thought of that speech, but it left me limp on the ropes, I could only think to myself, momentarily losing faith in free speech, free press and the entire first amendment, that this sort of utterance ought to be suppressed. If it ever got over to Moscow, I wondered, what comfort it would give the enemy. Seeing how we run our railroads, wouldn't Mr. Khrushchev be more confident than ever that he was riding the wave of the future? Wouldn't he imagine that our railroad proletariat was ripe for revolution?

Mr. Loomis, who is the president of the AAR, told those shippers that our rail transportation system was afflicted with a festering and cancerous growth that had to be cleaned out before the track was clear for progress. And what was this cancerous growth? Listen to Mr. Loomis:

I refer now to the wasteful and burdensome work rules—commonly known as featherbedding—which hang like an economic albatross around the neck of American progress. Rooted in the horse-and-buggy era of 40 and more years ago, the work rules have remained fixed and inflexible while the industry made enormous strides in technical improvement. These outmoded rules now constitute an immediate drain on the industry in excess of $500 million annually.

Five hundred million dollars in sheer waste. As Mr. Loomis said, the railroads could surely use that kind of money to spruce up their plant and improve their service. Just imagine, we might again ride in clean trains and see easily through the windows. We might be served meals at reasonable prices. Once again we might even be able to telephone for train information and get something besides a busy signal.

THREE OUTMODED WORKING RULES

I read on with mounting interest and perturbation. It seems that three classes of working rules account for most of the cancerous growth. The first is, according to Mr. Loomis, "the antiquated mileage-day pay system," under which the crew of a freight train receives a basic day's pay for covering 100 miles, and the crew of a passenger train the same pay for 150 miles. The rule made sense 40 years ago, said Mr. Loomis, when it took a freight train about 8 hours to run 100 miles, and a passenger train about 7½ hours to do 150 miles. But it doesn't make sense now when diesels, plus other improvements, have double train speeds.

Does the reader know what the wage-bill is for the 1,034-mile Chicago-Denver run, which takes 16½ hours? To-day's pay, you guess? No, siree. The carrier's cost on that run equal a total of 10½ basic days' pay. And the same goes almost to the penny for the New York-Chicago run. The New York-Washington stint is an even more flagrant example of featherbedding. Engineers on that "red apple" run receive 4½ days' pay for a round trip of 450 miles.

The other two areas of featherbedding mentioned by Mr. Loomis are "the towering jurisdictional walls that stand rock-hard in the path of streamlined service," and "the senseless requirements for useless crewmen on trains and other equipment." Mr. Loomis spoke scornfully of firemen who tend no fires and extra brakemen who handle no brakes, and he told the story of a yard crew that got extra pay for 100 miles of road service because they made a 4-mile trip to help a snowbound train. "How long," he asked, "can the Nation's economy bear such a deadly drag?" How long, indeed, when the annual price tag for redundant firemen is, again according to Mr. Loomis, $200 million?

It was no fun admitting it, but the facts appeared to be that something more tangible than romance moves men to ambition careers on the Iron Horse. Scratch a railroader and it was clear that the same basic commercial urges drove him as drove his brother in the factory or the countinghouse. Only one step remained to be taken before writing off the fancies of boyhood and getting on with the prosaic, dollars-and-cents business of life. I had to find out what, if anything, the featherbedders had to say for themselves.

That turned out to be a mistake. For from the Railway Labor Executives' Association in Washington came in response to my request a flood of material that nearly swamped me. Our railroad unions may not have the money to finance national advertising campaigns, but they do have a mimeograph machine, and that machine, I swear, must run right around the clock. They have, too, a director of public relations named Milton Plumb, and if anywhere on Madison Avenue there is a more capable and energetic craftsman, I have never met him.

Anyway, coming to the point, I learned, after pages and pages of text and many columns of figures, that the featherbedders were not pleading guilty at all, or hanging their heads in shame. They did not deny that there was featherbedding on the rails. There was a lot of it, they said. But if the public wanted to know who were reposing cozily in beds of feathers, it wasn't the employees in overalls. It was their bosses. As for the employees, they were stretched out on beds of thorns. The following paragraph, which occurred in a reply by the RLEA to a memorandum, "Featherbedding: Facts Versus Fancy," circulated through the press by the AAR, will give the reader the general idea:

Ordinarily, the RLEA would not dignify the absurd statements on this subject now being circulated by the railroads wtih a detailed reply because the facts about railway labor's soaring productivity speak for themselves and send the AAR's strawman up in smoke faster than any heat such charges may engender.

YET PRODUCTIVITY SOARS

In the RLEA counterbarrage, mention of the productivity factor occurs time and time again. Obviously, if productivity is increasing faster on the railroads than it is in industry generally, featherbedding cannot be much of a problem. And, say railway labor spokesmen, it is increasing faster. Over a 10-year period, from 1947 to 1956, the real product of rail workers, measured in revenue traffic units per hour, jumped 43.6 percent. The increase in industry as a whole was 26.1 percent. The Brotherhoods gleefully cite the tectimony of President Harry W. Von Willer of the Erie Railroad. At a rate case hearing conducted by the Interstate Commerce Commission on November 26, 1956, he said: "The so-called featherbedding of railroad wages has been greatly exaggerated by railroad executives. There is very little so-called feathierbedding."

Far from overpaying their operating employees, says the RLEA, the railroads don't pay them adequately. Workers on the mileage pay system, which is the equivalent of incentive systems in other industries, receive no overtime pay, no paid holidays, no differential pay for night work, and no premium pay for Saturdays and Sundays. Actually, they are not so well off as many skilled workers in other industries. Nor do the brotherhoods dodge the "horrible examples" of overpayment mentioned by Mr. Loomis. They quote the case of engineer M. H. Nelson, who has been on the choice New York-Washington run for 17 years. That run, going and coming, does take only 8 hours, and for the run Mr. Nelson does receive 4½ days' pay, or $90.39. However, as Mr. Nelson himself explains, the actual running time is only part of his chore. On the Washington end of the trip, he must report for duty 1¼ hours before departure time; on the New York end, 1¾ hours before leaving. On each end of the run, he has to dispose of the train and take the locomotive to the enginehouse. That task consumes about an hour. To all of that must be added layover time, during which, incidentally, he must pay his own expenses. Mr. Nelson testifies that the round trip usually takes about 20 hours. It can never be made in less than 16 hours. Estimating his pay at about $5 an hour, and his maximum monthly base pay at $912, the Washington Post and Times Herald commented that "this is by no means exorbitant for the skill and judgment required where safety is always at stake."

And it must be remembered, the RLEA adds, that the New York-Washington run is one of the plums of the business, given only to a handful of engineers of great skill and much seniority. Actually, the mileage pay system as a whole covers only a small minority of rail workers—less than 100,000 of a total of more than 800,000—and wages paid under it are only 4.5 percent of all railway wages.

As for working rules generally, these have been an issue since 1934. Time after time, say union spokesmen, they have been reviewed by Presidential emergency boards, "with generally adverse decisions to the railroads." The brotherhoods describe their attitude toward the rules as flexible, but they insist that before changes are made, safety factors, as well as economic factors, must be carefully considered. They note that 23 States have so-called full-crew laws, and that before the railroads can get rid of firemen who tend no fires and extra brakemen who handle no brakes, they must first persuade those States that the changes can safely be made.

As a matter of fact, the brotherhoods don't think these changes ought to be made. The fireman on a diesel, they concede, shovels no coal, but he performs a number of other duties—including the duty of acquiring the engineer's skill—that are necessary for safe and efficient operations. Similarly with brakemen. Most trains today do have air brakes, but modern trains are fast and long. A train of 100 freight cars, which is short by today's standards, is almost a mile long. It has 400 swinging brake beams, 200 air hose and 800 wheel bearings. Unless trouble in any of these is quickly detected, say the unions, a wreck may result.

And so the RLEA rebuttal goes. The kind reader will sympathize, I hope, when I confess that at this stage in my study, I threw up my hands in despair. On the one hand, I felt, there must be something to the railroads' charges. Otherwise they would not have adopted the dangerous and expensive strategy they have followed. They would not have risked angering their employees and destroying their morale. They would not have spent millions of dollars on advertising. They would not have taken out strike insurance, as if daring their employees to strike. Management doesn't go to such extremes unless it feels deeply the reasonableness and justice of its cause.

On the other hand, the railway unions seem completely sincere in rejecting management's charges. They are old organizations, respected by the public, fully acquainted with their industry, not given to radical demands. They obviously feel the justice of their cause no less strongly than the railroads feel theirs.

Fortunately, under the procedures of the Railroad Labor Act, there can be no precipitate action. Although the contract was opened for changes, in wages as well as working rules, on November 1, there cannot be a legal strike or lockout until well into the spring. Before that time a miracle of some kind may happen—and a miracle, seemingly, will be needed. Some informed observers are convinced that railway management and labor, despite their long experience in collective bargaining, are simply incapable of compromising their present differences. If this is true, one may hope that both sides will have the humility to admit their bankruptcy and inyite a neutral third party to arbitrate.

Dog-in-Manger Coal

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial which appeared in the Boston Sunday Herald on December 27, 1959:

DOG-IN-MANGER COAL

The soft coal industry—as represented by the National Coal Policy Conference—is willing to hurt New England a good deal in order to help the coal industry a little. It has a dog-in-the-manger attitude. Here's how it is:

Last March the Federal Government imposed mandatory controls on oil imports, including residual oil. The curbs on foreign crude oil were sought by domestic petroleum producers. But it was the coal industry that got a quota limitation on residual oil. This is the oil which fuels many industries and utilities and apartment, store and office buildings in New England.

The restrictions have not worked well. The attempt to maintain the domestic price in the face of the tremendous increase in oil production abroad has failed.

But the coal industry doesn't give up easily.

The Interior Department moved last month to let in for the first half of 1960 an additional 100,000 barrels a day of residual above the present 365,000-barrel daily limit.

But the coal lobby, assisted by a coal State Senator, protested so loudly that the increase was cut back to 62,000 barrels a day.

Even among sources that had been favorable to some import curbs, this was too much.

The periodical "Petroleum Week" called it "the lowest form of a political pacification of a pressure group."

What makes it particularly outrageous is the fact that relatively only a small amount of coal has been lost to residual oil competition. One spokesman for the coal industry said that only 5 million tons was lost to residual oil last year. This is only 1¼ percent of last year's production.

It is not the 5 million tons that chiefly concerns the coal industry. The industry knows it cannot get it all back even if residual supplies are sharply restricted—many customers will turn to natural gas rather than return to coal.

The industry simply wants to increase the general level of fuel prices so that what it does sell will bring in more money.

The fight will be on in Congress next year, and the issue will be whether the Government can properly assist one industry to rig the market.

Rural Development: A Constructive Step Toward Improving the Outlook in Agriculture

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. WILEY. Mr. President, we recognize that today the Nation is striving to find a solution to our complex problems in agriculture. In recent years we have witnessed far-reaching changes in farming, particularly as a result of the technological revolution.

In a field so complicated as agriculture, it has been extremely difficult to find any single-type panacea. Currently, however, there is one fundamental broad-scope program which—even though just in the exploratory state—shows real promise of dealing effectively with the basic problems of agriculture. I refer to the rural development program.

The aims of this program include: First, to expand industry and widen the range of off-farm jobs in areas with many small, low-production farms; second, to help families having the desire and ability to stay in farming gain necessary land, tools, and skills; third, to help younger rural people obtain adequate education and, especially, improved job skills.

Inaugurated in 1957, the rural development program now has designated about 200 counties in 30 States—including programs in Sawyer and Price Counties in Wisconsin—for such projects.

What have been the results?

New searching looks at the potentials of economically hard-pressed areas;

Community cooperation to carry out the agreed-upon projects for economic betterment;

Introduction of new industrial projects into low-income areas;

Expansion of existing small industries and enterprises;

Improvement of agricultural processing and marketing facilities;

Stimulated tourist business and recreation income, including development of more parks and attractive towns and communities;

Homes are being built to attract retired people and clinics and other health facilities are being established;

Forests and farm woodlands are being developed and woodworking industries are being expanded to give more employment and incomes to local people; and other activities.

Overall, the program involves close cooperation among local groups and agencies and appropriate Federal and State agencies in creating a many-sided program aimed at development of industries and other enterprises, educational and vocational training, better sanitation and health facilities, better and more efficient agriculture and marketing and generally opening new opportunities for small, low-income communities.

Believing this program represents a fundamentally sound approach to resolving some of the problems in agriculture, I ask unanimous consent to have a recent fact sheet published by the U.S. Department of Agriculture on the rural development program printed in the Appendix of the RECORD, accompanied by a list of the Federal agencies cooperating in this program.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

RURAL DEVELOPMENT PROGRAM, FACT SHEET, JANUARY 1960

WHY A RURAL DEVELOPMENT PROGRAM?

Fifty-six percent of the Nation's farms produce only 9 percent of farm products going to market. Most of these farms are operated by farmers earning a large part of their income in nonfarm work, by older farmers, and by those on poor land or inadequate units. They obtain little, if any, benefit from publicly supported price stabilization programs. Many of the farmers on these small, low-production units suffer the effects of underemployment. They may have productive employment equal to only one-half year of work or less. Underemployment in widespread farming areas of the Nation is not primarily a farm problem. It is a social problem calling for entirely different approaches than the income problem of commercial farmers.

WHAT ARE THE OBJECTIVES?

The rural development program, which was inaugurated locally in 1957, has three major aims: (1) To expand industry and widen the range of off-farm jobs in areas with many small, low-production farms. (2) To help families having the desire and ability to stay in farming gain necessary land, tools, and skills. (3) To help younger rural people obtain adequate education and, especially, improved job skills.

WHERE IS THE PROGRAM GOING FORWARD?

About 200 counties in 30 States have now been designated for the rural development program.[1] Individual State programs are under guidance of interagency committees, with administrative services provided by State colleges of agriculture through their extension services.

WHAT IS BEING ACCOMPLISHED?

Most counties participating in the program reported an increase in both farm and nonfarm opportunities in 1959. Industry expansion continued. Small woodlots and timber processing enterprises yielded a higher return. Several areas built new marketing and processing facilities or organized farmers' marketing cooperatives. Changes in agricultural production on small farms continued, with vegetable and livestock enterprises increasing in numbers and output. Vocational guidance and training for young people, as well as special campaigns to encourage advanced education,

[1] Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nesbraka, Montana, Nevada, New Mexica, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, Washington, West Virginia, Wisconsin, and Puerto Rico.

received more attention in areas participating in the rural development program.

WHO TAKES THE LEAD?

Federal and State government and educational agencies, such as land-grant colleges and universities, are helping people in the program areas plan the work, and supplying technical assistance and personnel as needed. However, local people representing farm, business, civic, educational, church, and other interests provide the day-to-day leadership.

WHAT ARE FEDERAL DEPARTMENTS DOING?

Special assistance from the Federal Government for the rural development program includes:

Provision of some 140 State extension agents and specialists; technical assistance through the Soil Conservation Service equivalent to 75 man-years; assignment by State and Federal forest services of technicians to aid in forest industry improvement; increased allocations of agricultural conservation program funds in 19 States; and special research projects in low-income areas in 22 States.

The Farmers Home Administration increased lending in rural development counties by some $3 million in 1958–59. Cooperating with State employment services, the U.S. Labor Department inaugurated special community employment programs in selected rural towns and communities. And through its regular credit programs, the U.S. Small Business Administration shared in a total of 63 loans for $2,540,885 to small firms in 48 participating counties.

Among important steps taken recently at the national level to strengthen the rural development program were the following:

President Eisenhower issued Executive Order 10847 formally establishing a Cabinet-level Committee for Rural Development Program to provide leadership and policy guidance to Federal agencies.

A senior Agricultural Research Service economist was named to serve as interim executive secretary to the national committee.

State extension service directors recommended that all States use the rural development approach to aid in the development of potential resources in lagging rural communities.

Farmers Home Administration is providing additional credit in rural development areas for farmers regularly employed off the farm.

And in May 1955, a week-long national workshop was held to train agency personnel assisting in the new program.

President Eisenhower has said, "The rural development program is successfully attacking the age-old and chronic problem of low incomes in widespread rural areas where there are fine farm families on small farms and poor soils. Rural families of such areas—nonfarm and farm alike—need, and we are determined must have, more adequate incomes and greater opportunities."

The National Committee for Rural Development Program—of which True D. Morse, Under Secretary, Department of Agriculture, is chairman—was established by Executive order of the President, and is composed of the Under Secretaries and Administrator of the following departments and agency:

U.S. Department of the Interior—is of service through such responsibilities as National Parks and Monuments; Public Domain, including mineral resources; Fish and Wildlife Service; and Indian Affairs.

U.S. Department of Agriculture—has 10 services actively working on rural development—Forest Service; Soil Conservation Service; Agricultural Conservation Program; Extension Service; Farmers Cooperative Service; Research; Marketing; Commodity Stabilization; Farmers Home Administration; Rural Electrification and Telephone; and Office of Information.

The Farm Credit Administration is active in support of the program.

U.S. Department of Commerce—through its Office of Area Development and its various bureaus offers a wide scope of services of assistance to businesses and industries. Roads, railroads, air services, and power are illustrations.

U.S. Department of Labor—is responsible for employment and career counseling services, and various apprenticeship and training programs. The Department has pilot programs in four of the rural development areas to determine how to extend more effective service to rural people.

U.S. Department of Health, Education, and Welfare—has many agencies, which with State cooperation, can help speed the progress of any rural development program. Examples are education, including vocational training; health services, including clinics and hospitals; social security and old-age assistance.

U.S. Small Business Administration is very active and has recently been making rural development type loans in small towns, villages, and rural communities at a rate of $120 million per year. Advisory and supervisory services are offered to small businesses and industries.

Council of Economic Advisers—has one of its three members serving on the national committee to help relate the program to the total economy of the United States.

Unfair Imports

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following letter was written by a patriotic American and expert on textiles. It should command attention from every Member of this Congress:

M. LOWENSTEIN & SONS, INC.,
New York, N.Y., January 25, 1960.

Hon. HENRY KEARNS,
Assistant Secretary of International Affairs, Department of Commerce, Washington, D.C.

DEAR MR. KEARNS: The writer is executive chairman of the board of M. Lowenstein & Sons, Inc. So that you may know something about us, we are an integrated textile company with 17 plants and upwards of 17,000 employees.

I know your job is a rough one, and you cannot please everyone. However, I believe first things first, which means, you've got to take care of the home ground first. Are you doing it properly?

We have, throughout our American industry, the double danger of diminishing exports and increasing imports, which means—and whoever would have thought we would be talking of that now—jeopardy of the U.S. dollar and the threat of unemployment.

In a speech which you made before the American Marketing Association on December 28, 1959, you stated that what is hurting sales of U.S. products abroad is lack of effective marketing, and not price.

With your background in sales and manufacturing, I am amazed at your statement. It may be that in your experience you have never had the privilege of trying to compete with unfair competition—competing with imported products made by labor that is receiving slave wages. If someone has a price edge, he gets stronger and stronger, and you get weaker and weaker, and it is only a matter of time before the fellow who can't compete is out of business.

Looking at American textiles, how can one say that all that is involved is effective marketing and not price? Indonesia was formerly a major foreign market for U.S. textiles. A recent news item states that Japan in a barter transaction will send Indonesia $10½ million of cotton textiles in exchange for raw cotton and processing charges—all of the fabrics to be shipped by September 30, 1960.

We are losing the European common market, and what will happen when the floodgates of Red China and Russia are opened and their products compete with ours in this country and freely in the world market? Just within the last month, Russia signed an agreement with 40 American textile machinery companies for $20 million of equipment for an integrated textile operation in Russia. German, Italian, and other U.S. interests are also assisting the building of synthetic plants in Russia.

Now, what does all of that mean to a company like ours? It means loss of foreign markets, increased competition and the threat of unemployment at home—unless our Government imposes proper duties and proper quotas.

The above applies to textiles, and is—or soon will be—true of steel, chemicals, drugs, typewriters, and practically the entire range of U.S. industry.

Realists as we all are, what's going to happen—I'm not talking about 1960 because that's a presidential year, and if we have unemployment, I know the Government will start pump priming—but what about 1961 and the years thereafter? What about the people coming up who are looking forward to inheriting this wonderful country of ours with flourishing times? Are they going to have it?

We've heard a lot about "giveaway" plans. How much have we got to give away today, with the flight of money the way it is and the flight of money extending further and further? How much employment can we give away before we will have to ask for help from nations all over this world? Now, I am not a politician. I vote and support what I consider, both nationally and locally, the best for our country.

We cannot be selfish. I don't believe in this. The textile business today is, to a certain extent, booming. It is not always going to be this way, and it is just in times such as these when we sow the seeds of danger which we will be unable to cope with when things are not going so well.

Now, I don't want to be misunderstood. Our policy is going to be "if we can't lick 'em, we are going to join them." If the policy of our country is to have foreign goods made with labor receiving slave labor rates take away our domestic market, and throw our good citizens out of work, we have to join in setting up foreign plants.

If we were a private company and not a public corporation, I—being in my 77th year—would say we will just stick to America. However, I am just one of the employees in our company which is owned by many, many stockholders.

Again, I urge, in the interest of not alone our industry, but of our country, that proper and fair consideration be given to protecting American jobs so that we can keep America strong which, I say, is our first job, and if we do not handle that job properly, then it doesn't much matter what else we try to do.

Very truly yours,

LEON LOWENSTEIN,
Executive Chairman of the Board.

A Balanced Highway Program

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. ROBISON. Mr. Speaker, as the Special Subcommittee on the Federal-Aid Highway Program begins its work under the able leadership of the gentleman from Minnesota, the Honorable JOHN A. BLATNIK, it is to be assumed that the whole, vast range of the program will be explored and certain legislative improvements developed. The subcommittee, of which I am privileged to be a member, will be seeking, among other things, to find possible ways and means of reducing the cost of completing construction of the system, a matter of serious concern to us all. However, in doing so, we must not, I think, lose sight of the need for building a balanced system that will not neglect our congested urban areas in which an estimated three-fourths of our people will reside by 1975.

The subcommittee is to begin, I understand, by reviewing the question of whether or not the Interstate System is meeting our so-called defense needs. Let us remember that those defense needs are manifold in nature, and involve not only the transportation of missiles and other military weapons and vehicles, but the transportation of defense workers to and from their place of employment, the transportation of defense materiel and supplies, the transportation of food and medical aid and supplies in time of emergencies, and, finally, that those highways must also serve as a means of escape for the citizens of our metropolitan areas in the event of an attack.

Under leave to extend my remarks, I accordingly insert the recent remarks of the Honorable S. Sloan Colt, chairman of the New York Port Authority, and a former member of the Clay Commission, touching on this subject:

A BALANCED HIGHWAY PROGRAM FOR THE NATION

(Remarks by Hon. S. Sloan Colt, chairman, the Port of New York Authority, at the annual meeting of the board of trustees, the Automobile Safety Foundation, November 4, 1959)

Chairman Hope, trustees of the Automotive Safety Foundation, President Mattson, and gentlemen, I am delighted to have this opportunity to speak to you today on a matter of timely interest to all of us. I refer to a balanced highway program for the Nation. It is most appropriate that this subject be considered at this meeting because of the many major contributions the Automotive Safety Foundation has made to the improvement of highway transportation in the United States. Through the foundation, during these past 22 years, businessmen have joined together to attack head on the critical problems facing our Nation's highway transportation network. The splendid record of the foundation has established it as a leading force in the promotion of safety, economy and efficiency on our streets and highways.

It was suggested that I should consider speaking here today as a banker, since the Bankers Trust Co. has for many years participated in the program of the Automotive Safety Foundation. But with your permission I should like to speak as a former member of the President's Advisory Committee on a National Highway Program, frequently referred to as the Clay Committee.

I should also like to speak as chairman of the Port of New York Authority. In these two posts, I have had to deal directly with the problems of providing modern highway transportation facilities. And it is these tasks which lead me to speak out today on a matter of deep concern to those of us who are responsible for arterial highway development.

This Nation today is in the midst of a vast expansion of its highway system. This program was conceived in 1954 by President Eisenhower who recognized clearly that our highway system, to a great extent, was obsolete, unsafe, and inadequate. The Clay Committee, established by the President, was charged with the responsibility of developing a "grand plan for a properly articulated (highway) system that solves the problems of speedy, safe transcontinental traffic, intercity transportation, access highways and farm to farm movement, metropolitan area congestion, bottlenecks, and parking."

With the cooperation and assistance of the staff of the Automotive Safety Foundation, the Clay Committee submitted its report to the President in January 1955. The report recognized that the need for rapid improvement of the Interstate Highway System, including the necessary urban sections, was vital to the Nation's welfare. It recommended a 10-year construction program for the 40,000-mile Interstate System at a cost to the Federal Government of approximately $25 billion. The committee's recommendations led to the current interstate highway construction program which was initiated by the Federal Aid Highway Act of 1956.

I am sure we are all pleased that the Federal aid highway bill enacted during the past session of Congress assures that construction will continue on the National System of Interstate and Defense Highways, even though it will be at a reduced level and will require several more years to complete than originally conceived.

I am, however, greatly disturbed by recent developments concerning certain aspects of the forthcoming review of the Federal highway program by both the executive and legislative branches of the Federal Government. Reports indicate that the review will involve consideration of ways and means of reducing the cost of constructing the system, through more austere design or by giving priority to the less costly rural sections of the system. The question of design, of course, is primarily for highway engineers and traffic experts to resolve. However, of overriding importance and of the most serious concern is the suggestion that current construction schedules be altered to deemphasize urban sections of the interstate system.

Frankly, it is inconceivable to me that consideration can be given to sacrificing the scheduled critical urban highway construction in favor of a priority for rural highways as an economy measure. Such a view loses sight of the basic purpose of this great Federal highway program—to provide a safe and efficient highway network essential to the economy of the Nation and adequate for the needs of national defense.

There is a clear and apparent need for urban highway construction. The United States is becoming increasingly an urban Nation. It is in these urban areas that the majority of the people of this country live, own and drive most of the cars and pay a large part of the taxes which finance the Interstate Highway System. These are the areas that are facing the serious problem of traffic congestion—congestion that would be compounded immeasurably if adequate urban highway capacity is not provided. And it is in these urban areas that lack of arterial highways can strangle the Nation's defense industries, commercial activities and economic growth. I must add, too, that the urban highways planned as part of the interstate system will not alone be sufficient at best to solve the total highway problem of today's metropolitan areas. But it is in the metropolitan areas that the need for highway improvements is the greatest and the interstate program is of major importance in this regard.

It can be expected that the trend toward urbanization and its accompanying highway requirements will, without doubt, continue as our population expands and as our metropolitan districts enlarge. By 1975, almost three-fourths of the Nation's people will reside in metropolitan areas. These people will own about 60 percent of the 110 million vehicles expected to be registered in 1975. Metropolitan areas will thus face increasing highway requirements. For example, the Port of New York Authority operates six bridges and tunnels connecting the States of New York and New Jersey as part of the highway complex of the metropolitan area. In 1959 these facilities will handle about 95 million vehicles. By 1975, we expect that the vehicular volume will increase to over 150 million. Similar expansion of traffic is anticipated in all parts of the New York-New Jersey metropolitan area. Nor is this increased traffic to be deplored. It is the result of a dynamic, thriving economy. Urban areas are increasingly the sparkplugs of the economy and their needs must be met if the objectives of the Federal highway program are to be achieved.

The Interstate Highway System is planned to connect all major cities and metropolitan areas of the Nation. Certainly these connecting highways cannot end on the fringe of urban areas or merely bypass them. Any new highways built without adequate access to the traffic-generating urban areas would be useless and an economic waste. Indeed, any such plan would be compounding the expensive, hazardous bottlenecks which the President specifically aimed at eliminating in formulating his highway program.

Urban highways are located in the areas where the traffic is—over one-half of today's highway traffic is generated in urban areas. And it is these urban areas that contain the industrial concentrations which form the backbone of the Nation's strength—both economic and military.

Throughout the country, the development of arterial highways has been a major stimulant to the economy of the areas they serve. Modern highway facilities increase business and industry values; improve the residential attractions of the community; encourage shoppers and recreational driving and contribute to job opportunities and buying power.

The investment in urban highways of the interstate system thus pays rich dividends. To subtract from the scheduled improvements within urban areas in order to add greater connecting mileage between urban areas would be self-defeating insofar as dollar-for-dollar economy and utility are concerned.

The report of the Clay Committee called for a balanced program of modern highways. It was fully aware that this program required expensive urban highway construction and did not hesitate to recommend that "the Federal Government assume primary responsibility for the Interstate network—to include the most essential urban arterial connections." The Committee specifically noted that to "render the Interstate System fully effective, it must be tied in much more closely with existing roads in congested

areas." Just for this purpose alone, the connections to the roads of the urban areas, the Committee in its appraisal of minimum needs included $4 billion to be spent over a 10-year period.

Similarly, the Clay Committee report noted the relative importance of urban highways. The Committee's report stated that only about 10 percent of the total highway mileage of the Nation is within urban areas but that these highways account for approximately 50 percent of the total vehicle miles of travel on all highways in the United States. It was estimated, too, that almost one-half of the total expenditures on the Interstate System would be required to be spent in the urban areas to satisfy the needs and to accommodate the increasing pressures of traffic. This forecast has been borne out by the experience of the first few years of the highway construction program, with anticipated expenditures in the urban areas approximating 42 percent of the cost of the total program.

The need for metropolitan highway improvement is not new. Indeed, it was clearly foreseen as early as 1944, in two separate reports to Congress. One, "The Role of the Federal Government in Highway Development," was prepared by the Automotive Safety Foundation at the request of the Senate Postwar Planning Committee, and the other, entitled "Interregional Highways," was prepared by the National Interregional Highway Committee appointed by the President in 1941. Both documents gave special emphasis to the highways needs in urban areas, and the latter report provided the basis for the establishment of the Interstate Highway System which was subsequently authorized by Congress in the Federal Aid Highway Act of 1944. The following statement from the interregional highway report emphasizes the importance of adequate highways to serve large cities and metropolitan areas:

"All facts available to the committee point to the sections of the recommended system within and in the environs of the larger cities and metropolitan areas, as at once the most important in traffic service and least adequate in the present state of improvement. These sections include routes around as well as into and through the urban areas. If priority of improvement within the system be determined by either the magnitude of benefits resulting or the urgency of need, it is to these sections that first attention should be accorded."

A balanced program of modern highways has now been under construction for over 3 years. The States have accepted in good faith the expression of Congress to continue this national highway program on schedule, and have provided the necessary manpower and financial arrangements for meeting the State's share of the cost of the program. In fact, many States and some cities that are participating financially in this program have borrowed money through the sale of bonds to finance their share of this program. Consequently, many of these States and cities would be perilously close to serious financial difficulties if the Federal highway program provided by Congress and supervised by the Bureau of Public Roads with the cooperation of the State highway departments were to deemphasize the urban portion of the overall program.

Similarly, the elimination of urban highways from the interstate program would force local and State agencies to divert a larger proportion of their tax resources, already under tremendous pressures for other basic public needs, for the construction of the essential connecting arteries to the Interstate System. The placing of such an additional burden on local jurisdictions is far from the original intention of the President's highway program.

These past 5 years have seen an increased glut of traffic congestion in urban areas. They have demonstrated the continued concentration of our population in urban centers. They have confirmed the President's wisdom in recommending, and the Congress' foresight in enacting, what is now the Federal highway program. Certainly the program will fail in one of its major purposes if the cities and industrial areas remain strangled with traffic because of lack of needed expanded arterial streets and highways. Therefore, let any reexamination of that program keep in mind the fundamental objective of the program as stated by the President, "a grand plan for a properly articulated highway system," "paying off in economic growth," and making "a good start on the highways the country will need for a population of 200 million people."

Desecration of Houses of Worship

SPEECH
OF
HON. JESSICA McC. WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mrs. WEIS. Mr. Speaker, there is little that I can add to the remarks of my senior colleagues, but I think it is important that by passage of House Concurrent Resolution 465 the prestige of the Congress of the United States is added to the growing list of those who have expressed shock, outrage, and disgust at the desecrations which have been committed to houses of worship, cemetaries, and other sacred sites.

It is significant, too, that while this resolution condemns, in no uncertain terms, these acts of desecration, it refrains from directing accusations in any particular direction or at any particular group of people. It recognizes that none of us are blameless, and that these shameful acts have occurred in America as they have in other countries. It calls upon all peoples, of all nations, to devote their best energies to stamping out those who harbor and promote the hate which manifests itself in such a cowardly fashion.

Whatever the causes of these recent outbursts of anti-Semitism, and I suspect they are numerous and complex, we who are opposed to them must act vigorously to discourage their recurrence, and to punish those who are found guilty of their perpetration.

This resolution is a good beginning, but it cannot be the end of our efforts to stamp out racial and religious prejudice. Resolutions such as this serve to focus the weight of public opinion on the issue, but resolutions alone will not root out of our society those latent seeds of bigotry and hate from which these outrages spring. It is only through militant devotion to the principle of universal brotherhood and the practice of good will and mutual respect which this feeling of brotherhood engenders that we can hope to weed out the hatemongers among us.

House Concurrent Resolution 465 can be, if we make it so, a vital first step in a new campaign against intolerance and prejudice of all kinds. As such it is eminently worthy of the support of every Member of the House, and I shall certainly give it my full support.

The Corn Tassel as U.S. Floral Emblem

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. QUIE. Mr. Speaker, these days there are many decisions Congress is required to make. There are many steps which Congress has an obligation to take. There are many questions Congress is bound to deliberate for the well-being of the country and its people. At the outset, I will say that the question of a floral emblem does not stand in the highest rank in order of priority. But this fact does not make selection of an emblem a lighthearted, gay, jocular pastime for the Congress. It is about the selection of an emblem that I speak today.

I bring it up at this time, Mr. Speaker, because in recent weeks the subject of a floral emblem has been mentioned. Much has been made over the various positions held by advocates of certain flowers, shrubs, and plants. Contradictory views have been expressed over the relative beauty of proposed flowers and growths. I believe that if we decide to take the time to consider an emblem we should give this subject the full deliberation it deserves. For that reason, I have a few remarks dealing with what I believe to be the qualities desired in an emblem.

I believe that selection of an emblem is more important than any ordinary beauty contest. A national emblem is, after all, a symbol of our entire country, its people, its past, and its qualities of character as it faces the future.

For that reason, I believe that the entire nature of a plant—its identification with and importance to America—should be taken into consideration. A Minnesota woman, Miss Margo Cairns, of Minneapolis, has long pointed out the desirability of the corn tassel as our national emblem. She has cited the fact that corn has been identified with America, that it was literally the major crop of the Indian as well as the pioneers, and that our history is replete with examples of human dependency on corn.

Miss Cairns has written:

A national floral emblem must also be distinctively and wholly American. It, too, must be a symbol of the land, the Nation, its people, its history.

1. It must be of American origin, born in the Western Hemisphere, and found nowhere else before 1492.

2. It must have its roots in every State unifying the Nation.

3. It must serve the Nation, and it certainly has served it well from the first landings on the Atlantic coast to the present.

4. It must not be a flower of mere prettiness, but possess the rare beauty of practicality, or productivity.

5. Its choice as a national floral emblem should be based on gratitude for what it has been, is, and always will be to the people of the United States—a true symbol of this Nation.

Because corn is identified with our heritage, I believe it should be given serious consideration whenever the Congress takes upon itself the matter of a national emblem.

Dent Demands Facts on Foreign Bids

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. DENT. Mr. Speaker, sometimes one wonders how far we can go in underselling the importance of maintaining our own economic defenses as well as our military.

Russia and the communistic threat seems to have made this country into a punch-drunk fighter shadowboxing the sound of every bell, or even worse, a cringing coward who dodges every feint and anticipated punch and forgets to throw a few of his own.

All one has to do is read our own papers and business magazines to find out that all is not well in our economy.

The following release by me followed a story in Business Week which covered the subject matter contained therein:

DENT DEMANDS FACTS ON FOREIGN BIDS

Congressman JOHN H. DENT, Democrat, of Pennsylvania, today called upon the Bureau of Reclamation to disclose facts in the bid controversy between English-Electric, England, and Baldwin-Lima-Hamilton, United States of America for eight hydroturbines for Glen Canyon Dam, a Federal project.

DENT claims that this case points up the ridiculous and idiotic position in which this Government has placed American producers and American workers because of the interpretation of the Buy American Act by this administration.

Here are the facts outlined by DENT: The English bid, $6,214,552; the American bid, $6,392,000. Although the President has cut the buy American 25 percent differential down to 6 percent, the American company met this unrealistic differential and was in line for the work.

The English company has protested and won a 45-day delay in the granting of the award on the grounds that the American company is producing more than 50 percent of the costs of the equipment in a foreign country (Belgium). The English argue that under this arrangement the American company is denied the protection of the Buy American Act.

The controversy began over which figure is right, the British or the American.

DENT further explained that the real issue is not that an English company can tell our Government where to buy, but goes deeper.

The American company was forced to go to a foreign supplier in order to even come close in the bids by the ridiculous operation of our Federal purchase plan.

If the product were wholly manufactured in the United States, the American company would be so far out that the British company would have had no competition for the bid.

DENT said that the problem posed is this—Do we quit bidding American products? Do we buy all the component parts in foreign countries and still claim "buy American protection"? Do we stop kidding ourselves and get back to American fundamentals, or do we quit kidding the foreign countries about the meaning of buy American legisaltion.

"As a Congressman, and as a citizen taxpayer," said DENT, "I want to know and it's about time the American people, especially the American workers, businessmen and particularly Members of Congress know, what's going on in our Government."

I will not elaborate on this particular case because the record contains my many presentations on this subject. I will say, however, in passing, that sooner or later this subject of American investment abroad, American aid to other competitive nations, American home economy, and social security amendments will be the major issue in our political arena. We cannot continue with the kind of idiotic thinking that seems to start from nowhere and aims to go to the same place.

In this regard, listen to this little item out of one of the leading American newspaper's business section, telling American manufacturers that there are many fine locations for their plants in Europe. It goes on to show where the locations are that offer the least costs of operation because of lowest wages. It further goes on to say that they can sell not only in the European trade bloc, but can undersell their own plants here in America.

How then do we help our economy by taking American money, investing it in Europe and Asia, hiring foreign labor, selling to our former customers as well as shipping back into the United States the same goods we manufacture here in surplus?

Recently, a notice came out about the Japanese building a watch factory in India. However, when you read the details, you find that the Japs are building a plant for the Indian Government to operate. Further, they are being paid for building it and for providing the technical assistance. Of course, we do it differently, we not only give them the money but we even allow them to buy the construction needs somewhere else and then give them a free market here in America for their products. We not only help private enterprise abroad, but we also help governments to get into business to compete with us.

One question seems unanswerable. How can an American watch manufacturer pay taxes, dividends, wages, and local civic charges and compete against monopoly government-owned, non-tax-paying plants abroad?

One example of this is Volkswagen, owned and operated by the West German Government. Here is a little story of how we get suckered in by our friends: The United States refused to allow American pipe producers to sell Russia 12,000 miles of pipe for an oil pipeline on the grounds of security, and so forth. The West German Government sold Russia the pipe from plants rehabilitated by American foreign aid and American taxpayers' dollars. The Germans take 100,000 Russian-made automobiles as part of the payment. The German Government took the Russian-made cars, sold them through the Volkswagen distribution system and released 100,000 Volkswagens for sale outside of Germany mostly in the United States. We not only lost the pipe order, but in the end we probably paid for most of it.

Another angle that this administration seems to overlook is its blind opposition to area development, high interest rates and refusal to amend the Social Security Act by lowering age limits and increasing benefits, both medical and minimums. In the face of this attitude, it is strange to see the President demanding more economic aid for foreign countries when these same countries are doing exactly what he refuses to do here in America and in many cases doing it with our money.

West Germany, for instance, has set up a special tax and development aid for so-called distressed and underdeveloped industrial areas and communities in Germany. The President and our own chamber of commerce oppose this program for Americans, but both support vigorously the billions for foreign countries.

Belgium: This is really a dandy setup. Belgium has also set up a special set of help moves for its own underdeveloped industrial areas and one of the concessions is that these communities can borrow money at an interest as low as 1 percent. Imagine this—when your community and mine cannot get money without paying the exorbitant high interest rate demanded by this administration who are even now demanding that Congress lift the ceiling on interest rates on long-term bonds to an unrestricted amount.

Where do the Belgians get the money they loan? Much of the money used by these nations comes from the World Bank, the International Monetary Fund, foreign economic aid, the technical assistance program, the Export-Import Bank, the Development Fund—United States completely—Special United Nations Fund, the new Inter American Development Fund for Latin American countries only, and, of course, the new IDA under the World Bank.

This will make it possible to loan money to India and other so-named underdeveloped countries on "soft" loans, loans that can be paid back in the "soft," hardly negotiable funds of the countries getting the money.

The United States starts this one off with over $320 million and also this will give us a chance to spend the accumulated funds under Public Law 480, which is the soft money that the countries now owe us and which we cannot take out of their country owed us in payment for farm products, and so forth, but we can spend it by loaning it back to them, or giving it to other needy nations to build production machinery for industrial goods.

One thing I want to call to your attention is that the new Fund will be able to loan money where the World Bank is restricted by law and cannot do it. I will quote from the Washington Post of February 1 to give you an authentic position and not one prejudiced by political partisanship:

World Bank officials said yesterday a deliberately "broad latitude" will be used in granting loans to the underdeveloped nations. Some may be free of interest, some long-term, some repayable wholly in "soft" currency.

Individual nations will not be required to stand as guarantors for loans made to borrowers within their borders, such as is true now for World Bank loans, and IDA, unlike the World Bank, will be able to loan money for such projects as community water supplies, sanitation, and housing developments.

One item in the IDA charter is of particular interest to the United States. It permits a member nation to contribute "soft" currency in addition to its own "hard" currency quota. This means that the United States will be able to put to use the huge accumulations of Public Law 480 funds, which may total $5 billion this year. These funds are the repayments in "soft" currency which underdeveloped countries have made for U.S. surplus crop shipments.

Now to keep the record straight, the "surplus farm products" they are talking about were paid for by American taxpayers; and if in the end we get no payments for them, then why did we not just give them away in the first place, and stop all the added costs, and so forth, that we are still paying.

You will also note that this administration and business organizations such as the national chamber of commerce claim that it is inflationary to spend money for public facilities in urban redevelopment, housing, and for other area needs, but it is OK for others to spend our money to do the same thing.

This is only part of the picture. For instance, the arguments against social security benefits for medical and hospital care here in America are advanced by the same promoters of giving our American aid to countries that have complete socialized medicine as part of their system of government.

We further find the President opposing aid to education for student housing under a loan program while promoting student housing and aid to education in other countries.

Recently Campbell Soups announced the plans for a large canning plant in Mexico—Business Week—"because farm produce is cheaper, construction and labor costs are the lowest, and they can still sell through their established American outlets."

We are paying for surplus farm products, the American farmers' income is lower than it has been for years, we have surplus labor, surplus farms, but that does not seem to matter to the kind of profit-seeking internationalism we are now practicing in this country.

This, Mr. Speaker, is only a scratch on the surface of this economic as well as military problem. I am personally convinced that just as we are admitted to be second to Russia on missiles, if we do not stop our "ducking at every swing," we will be knocked out of the economic war not because we were hit, but because we wore ourselves out.

The Economic Plight of the American Family Farmer

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. BROCK. Mr. Speaker, on January 15 this year my insertion in the Appendix of the RECORD was entitled, "How Many Farmers?" and dwelled on the economic factors that are fast reducing the population of our family farms. With little, if any, firm assistance from the present Secretary of Agriculture and the national administration, the family farmer in America is slowly but surely being forced into bankruptcy. The period for him to emerge, in the face of expenditures exceeding income, is long overdue and fading fast, particularly so when no administrative efforts are being made to give him a fair and just share of the increasing wealth of our national economy.

The economic plight of the American family farmer is profoundly expressed in the attached editorial published in the January 28 issue of the Burt County (Nebr.) Plaindealer, an enterprising weekly newspaper that is close to the agricultural situation. The editorial goes further than the problem of the family farmer, and emphasizes the root of the evil will eventually reach the small businessman in the rural communities and destroy him along with the farmer.

This editorial, and more like it that have been published throughout the land are reminders of the voice of St. John, crying in the wilderness, hoping that the message will be heeded before it is too late. The national administration agricultural policies of the past 7 years have brought nothing more than economic stagnation to the agricultural areas of the country, and I will endeavor to emphasize seven primary reasons in a further paragraph following the editorial.

Therefore, Mr. Speaker, with the permission of my colleagues to extend my remarks, may I commend your attention to the timely and warning editorial of the Burt County Plaindealer:

FARM PROGRAM PLEASES NEARLY EVERYONE, EXCEPT THE FARMER

Secretary Benson's farm program, under which thousands of farmers are leaving the land to seek more lucrative employment in other fields, seems to satisfy about everyone—everyone, that is, except the farmer who must still make his living farming the soil and raising livestock.

We get lots of mail and publicity releases from industrial organizations, financial groups, Republican politicians, educators and farm advisers with cozy, secure jobs, who plead the cause of "freedom for the farmer" and the Benson program.

Cheap food is fine for the fellow who doesn't have to produce it at a loss and "we must keep eatin' costs down" even though everything else, including taxes continues to climb in these days of prosperity created by continuously growing Government bureaus, a record national debt and more and more taxes.

The day when a hard-working farmer could support his family on a moderately sized farm will soon be a time of the past and the little business in rural communities will fall victim to the same conditions which are selling the farmer down the road. Will that be good for America? We don't think so.

FARM INCOME STATUS—PAST, PRESENT, AND FUTURE

First. Farm prices at 77 percent of parity, the lowest in 19 years.

Second. Farmer's share of consumer's food dollar at 37 cents, lowest in 20 years.

Third. Net farm income, $10.3 billion (1959), lowest in 17 years.

Fourth. Farmers' out-of-pocket net income losses since 1952, almost $20 billion.

Fifth. Farm production expenses at new peak of $26 billion in 1959, using up 68 cents out of each gross farm dollar. That's almost as bad as 1932.

Sixth. Forecast of even lower farm prices and net income for 1960.

Seventh. Five Presidential vetoes of major farm bills in 7 years.

Prosperity for our farmers can be brought about only by passage of good, workable farm legislation that will boost the net income of farm families, and by revamping our lopsided national economy into some semblance of equal balance between the annual incomes of the urban industrial workers and other high-paying occupations, and the farmer who toils in our agricultural areas. Lack of equal prosperity for the farmer will not only destroy small business in the rural communities but will be reflected in considerable measure throughout the industrial and manufacturing areas of the rest of the Nation.

A Plug for the Parks

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting article which appeared in the Boston Traveler on January 20, 1960:

A PLUG FOR THE PARKS

It's to be hoped that President Eisenhower's support in his budget message for two national parks in Massachusetts will stir Congress into early action. Both the

Minuteman National Historical Park in Concord, Lincoln, and Lexington, and the Cape Cod National Seashore Park have been hanging fire longer than necessary.

And, as the President points out, speed is essential in the Cape project "before it is too late."

The 32,000-acre stretch of shore, which the Interior Department wants to set aside as a U.S. recreation area, is one of the few remaining undeveloped spots on the Atlantic seaboard.

If it isn't reserved soon as a park—which would be a big tourist attraction—it certainly will be commercialized. Cape residents, both pro- and anti-park, are understandably irked by congressional delay, which hamstrings local planning for the future.

There should be fast action, too, in completing plans to make the Revolutionary battlegrounds around Concord a National shrine. Congress approved the idea a year ago. All that's needed now is the money—$65,000.

Stamp of Inflation

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. MACK of Washington. Mr. Speaker, in every country where national deficits become a habit the value of that nation's money deteriorates and eventually becomes practically worthless. Several examples of this have occurred within the lifetime of all Americans now living. These should warn all of us that it is time to get the budget in balance and keep it in balance to the end that our present dollar, now worth only 48 cents in purchasing power, does not deteriorate into a 25-cent dollar, a 10-cent dollar, or a dollar of even lesser buying power.

The Seattle Post-Intelligencer, a Hearst publication and one of the most widely circulated and influential newspapers in Washington State, said of this danger editorially in its issue of January 29, 1960:

STAMP OF INFLATION

Ralph Lomen, prominent Seattle-Alaska businessman, puts forth an interesting—and simple—illustration of inflation. As he says, the language of the economist on the subject is not easily understood by the layman.

However, Germany offers a classic example of inflation evils in the period following the First World War. Being a philatelist, Mr. Lomen illustrates the trend with a page from one of his stamp albums.

The denomination of German postage stamps in that period advanced from 1 mark through more than a dozen additional issues until, in 1923, the ultimate stamp of a billion marks was reached.

Mr. Lomen points out that the story of U.S. postage is as yet a lesser example, but is in the classic pattern—a 5-cent fee being advocated to succeed the raises from the original 2 cents, 3 cents, and the present 4 cents.

Yes; the day could come here when you would approach the window of your post office and diffidently ask for a $10 stamp in order to write your Aunt Emma in Kansas City. For a small temporary loan of $10,000 to catch up on your grocery bill.

The Poles Are Spiritual Allies

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. PUCINSKI. Mr. Speaker, I have the pleasure of including in the RECORD today an editorial which appeared this morning in the Chicago Sun-Times. I wish to congratulate the Sun-Times for its deep understanding of the problem which today confronts Poland.

I am in full agreement with the Sun-Times editorial that the "impulse toward liberalism and freedom still reaches out in every way it can" among the people of Poland, despite the fact that today they are forced to live under a Communist government imposed upon them against their will.

I believe that the people of Poland, by their stubborn refusal to submit to Communist dogma, today constitute one of the most significant factors in keeping the Soviet Union from engaging in all-out war.

The money that the United States has given the people of Poland in recent years is indeed a small amount when we compare our annual appropriations for national defense during that same period. The Sun-Times is to be congratulated for placing this American financial assistance to the people of Poland in its proper perspective. But this economic assistance should in no way deter the United States from taking a firm position that there can be no real lasting peace in Europe so long as Poland and other satellite nations remain enslaved by the Communists.

Mr. Speaker, the Sun-Times editorial follows:

THE POLES ARE SPIRITUAL ALLIES

Poland, among all the Soviet satellites, has received the most solicitous treatment from the United States. In the past 3 years our total assistance to that country has amounted to more than $300 million. Most of it has been in food credits (example: this week's deal for $40 million worth of our surplus wheat). A total of $61 million has been for machinery.

This is good business from every point of view.

On the practical side it has helped to shore up the Polish economy. An incidental effect has been to help put Poland in a position where she is now reported both able and ready to pay $40 million in settlement for U.S. property in Poland confiscated in World War II.

But a more persuasive reason for this country to work at good relations with Poland is found in reports by correspondents and travelers returning from Warsaw.

Poland is technically Communist, dominated politically and militarily by the Soviet Union. But in spirit, Poland is still Poland. It shows in many ways—many deviations from the party line so sedulously followed in Russia. Poles still establish their own standards in music, literature and art. They are, moreover, a deeply religious people, and they worship pretty much as they please. The impulse toward liberalism and freedom still reaches out in every way it can; Soviet-style communism has not found the way to engulf their souls.

To foster this spirit in a poeple who have often been dominated but never wholly conquered is surely as useful and promising a part of our policy as anything we may undertake at the top-level conference tables. It builds and conserves basic support for freedom against a time when that strength can make itself felt.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. RAINS. Mr. Speaker, I am proud to announce that one of my young constituents is the Alabama State winner in the current "Voice of Democracy" broadcast scriptwriting contest, which is sponsored nationally each year by the National Association of Broadcasters.

The Alabama winner is Miss Geraldine Reeves, a student at Plainview High School at Rainsville, Ala. She will be in Washington later this month to participate in the national contest finals.

It is inspiring to read this young lady's script and it is also reassuring to know that the generation soon to assume the leadership of our democracy carries with it these cherished sentiments. For the benefit of my colleagues, I submit Miss Reeves' prize-winning script which is entitled "I Speak for Democracy."

It follows:

I SPEAK FOR DEMOCRACY

We who live in the troubled times of the 20th century know all too well the threat to our great democracy. Therefore it is not only our right but our duty, to join hands with our fellow men and make even stronger the great chain which binds us together, because that chain is no stronger, no better, than the men and women who compose its strength.

Dictatorship is brutal because it is brittle. It cannot bend—it can only break or be broken. It cannot lead its people, it can only drive them.

Democracy, on the other hand, is resilient. It bends without breaking, it sways to the left or to the right and returns to the point of natural balance. It calls for leaders, not for drivers. A free people can be led a greater distance and to greater heights than a slave people can be driven. We are a great people and a great Nation today because we have carried forward the shining spirit of the Declaration of Independence. We are great because we have built and maintained government of the people, by the people, and for the people. And we realize even more every day that eternal vigilance is the price of our liberty.

No date in the long history of freedom means more to liberty-loving men in all liberty-loving countries than the 15th day of December 1791. On this day 168 years ago, a new Nation, through an elected Congress, adopted a declaration of human rights. In this bill was the provision of freedom of thought, freedom of speech, and freedom of religion. Above all, it was to protect absolutely the equal rights of the poorest, and the richest, of the most ignorant and the most intelligent citizen, and it is to stand

forth as a triple wall of iron around our native land, against the mad blows of violence and the fatal cause of corrupted minds. This is our system of liberty under law and this alone can give us freedom.

It has been said that America fears no enemy but ignorance. Ignorance of our Government, ignorance of the people we chose to run our Government, and ignorance of matters which compose our everyday life. In order to remain the great Nation we are today we must forever hold high the eternal guiding light that expresses a faith in individualism, in freedom, and in equality, that our forefathers fought and died so gallantly for. So we have fought and we will fight again if need be, for the things we have always carried nearest to our hearts—for a greater democracy.

And we, the youth of the 20th century, realize this; we realize that the fate of our Nation will someday rest upon our shoulders, and who are we to throw aside this great responsibility to our country that God so generously gave to us? We should bow our heads and say a thankful prayer that the flag of the United States of America which stands for peace, democracy, and freedom for the individual, is still there, waving proudly in the breeze, over a Nation whose very armor is peace, democracy, and the American way.

Our Nation stands for so much freedom, and offers so many opportunities that it is the responsibility of its citizens to support it. I feel that it is an honor and duty to speak for democracy.

Congress Delays Justice

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. LINDSAY. Mr. Speaker, I have asked unanimous consent to include in the Appendix an excellent editorial which appeared in the Christian Science Monitor on February 1, 1960, on the subject of the need for additional judgeships in the Federal system. The House Judiciary Committee is currently holding hearings on the Judicial-Conference-backed omnibus judgeships bill. This editorial is most pertinent.

The editorial follows:

CONGRESS DELAYS JUSTICE

Nonpartisan spokesmen for good government must be ever alert to two constant partisan pressures on the courts—even where they are not elective. Each party seeks the patronage involved in judicial appointments. And each seeks to embed its political philosophy in the judiciary. The considerations appear to be governing the excessive slowness of Congress in creating badly needed new Federal judgeships.

When justice becomes tardy and expensive it turns into injustice. Court delays have become intolerable in many Federal districts. Rarely should the blame go to the judges; many of them are laboring conscientiously but vainly to keep up with the increase in court business. A survey shows that one category alone—automobile injury cases—has risen 500 percent in 20 years. From 1941 to 1959 the backlog of untried cases jumped 117 percent. In the southern New York district the median time required to bring a case to trial is 4 years.

For 5 years Congress has had before it proposals to increase the number of judgeships to meet the mounting burden of business. Every year the Judicial Council of the United States, a nonpartisan body, has urged action. One proposal calls for the addition of 45 judges to the Federal bench. President Eisenhower has repeatedly cited the needs to Congress and has even promised to divide the appointments equally on a bipartisan basis.

Proposals for correcting this situation have been pigeonholed by congressional committees. From our nonpartisan sideline this looks like a flagrant delay of justice by Congress. We hope the Democratic leaders there will soon recognize that this great disservice to the country cannot really serve their party.

Invite Red China

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, it is our good fortune in Colorado to have the privilege of reading the Denver Post, whose editorial page unflinchingly talks sense to the people.

On January 25, the leading editorial calls attention to a fact which must come to influence American policy:

RED CHINA SHOULD BE INVITED TO THE DISARMAMENT TALKS

Both the State Department and Secretary Herter now admit that if any international disarmament treaty is to mean anything, Red China must be a party to the agreements.

The issue comes up because the nations are now preparing for their next great round of general disarmament talks at Geneva on March 15.

Red Chinese Foreign Minister Chen Yi has reminded them that his Government cannot be bound by any agreement it does not help negotiate, or sign.

One State Department announcement hinted that this country hopes Red China might be brought in toward the end of the talks if they are getting anywhere.

But this is a naive hope.

Red China is primarily interested in asserting its international prestige.

It is highly unlikely that Peiping would ever join any agreement it had not been working on from the early negotiating stages.

And so this country once again finds itself impaled by a policy toward Red China that has in effect denied the existence of a Communist revolution now 10 years accomplished.

None of the reasons why we have taken our past stand have changed very much during that decade.

Red China is still arrogant, militaristic, and still feeds its people "hate America" propaganda every day.

The wounds of Korea are still there, as are five Americans in Red Chinese prisons.

Chiang Kai-shek is still on Formosa, too, a faithful if minor ally on a tiny island that is recognized in the United Nations as one of the world's five great powers.

Across from him on the mainland sit generals commanding the world's largest standing army. And in the background lurks the threat of their getting nuclear weapons.

Secretary Herter's admission—that Red China must someday be represented in any worldwide disarmament system—is courageous, since he represents a political party that has made fervent pledges of support to Chiang.

But that fervor was part of a world in which we had a near-monopoly of atomic weapons and in which it was still a question whether the Chinese Communists could stabilize their regime.

Now Herter is looking at the cold truth. Red China is stabilized and is a member of a hostile bloc of nations that is at least our equal in weaponry.

These facts can only mean, realistically, that Red China should be invited to the disarmament conference at its beginning, whether we like it or not.

Our hope for peace—perhaps a slim one but the best one we have—is to use what influence we can to encourage Peiping to join in arms control.

This cannot possibly be done if Red China's chair at the conference table is empty.

Raymond Palombo of Nahant, Mass., Pioneer in Lobster Fishing

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an article about my constituent, Raymond Palombo of Nahant, Mass., who is planning to open a new frontier in the fishing industry—deep sea lobster fishing.

The article follows:

[From the Boston Globe, Jan. 24, 1960]

DEEP SEA LOBSTERING NEW VENTURE IN FISHING

(By Mary Sarah King)

Most folks think of a lobster boat as a small 20-foot work boat, chug-chugging through the murky mist of the early morn, stopping at lobster pots as the crustaceans are scooped up for market.

Raymond Palombo of Nahant has a better and bigger idea of lobster fishing.

A fisherman for the past 30 years, he is building an 80-foot vessel, which he plans to devote to a new frontier in the fishing industry—deep sea lobster fishing.

Palombo, a husky, red-faced 6-footer, has been working 3 years now with his partners on the enormous boat in his yard on Forty Steps Lane, Nahant.

He got the idea a short while back when the Fish and Wildlife Service discovered a well-stocked lobster bed in the ocean off the coast of Nahant. He decided that this would be a lucrative enterprise.

He has been working on the boat now for 3 years. It should be completed by 1961 and will be valued at $125,000.

When the project was begun, Palombo ran up against some red tape in Washington and never did receive the loan he requested.

The frame of the boat fills the near horizon and towers over the five-room ranch house, which he also built. Hundreds have watched its various stages of building, coming from all parts of the State.

There is another observer, whose interest is more than casual—Palombo's comely wife, Almena, who has been living these past months with the huge form greeting her

vision every time she stepped out the back door.

Almena doesn't mind, however. In fact, she looks upon the vessel with pride and admiration for her husband's courage and persistence.

That 80-foot monster represents dancing parties, theaters, and other entertainment that might have been if the investment, $25,000 to date, had not been diverted toward the building of what they claim is their investment in the future.

Even the children are active participants in the project. Raymond Jr., 17, doesn't balk at carrying lumber and other back-breaking tasks.

Six-year-old Almena and young brother, Marc, 3, pause in their play, to yell encouragement to their dad drilling the frames on the deck high above them.

On other boats, her husband has built, Mrs. Palombo has lent a craftsman's touch, but on this, she prefers to stick to her housekeeping tasks which includes cooking tasty Italian dishes.

Palombo and his partners, Frank "Swede" McClain Jr., and Charles Baxter, both Nahanters, are not disheartened over this long-term building project. They expect in early 1961 to launch the vessel which will open a new era in lobstering on the north shore.

We Must Condemn the Desecration of Sacred Places as We Would Condemn an Attack on Our Basic Democracy

SPEECH
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. COLLIER. Mr. Speaker, I would like to commend my colleagues in this House for their firm action in unanimously supporting passage of House Concurrent Resolution 465 condemning the desecration of sacred places and the violent and outrageous attacks upon the religious beliefs of people here in our own country and in several countries abroad.

In many cases I believe these hate bombings and disgusting hate mailings have been the work of cranks, young hoodlums and ignorant pranksters. However, I understand that reliable information indicates that some of these acts of vandalism in Germany are Communist inspired. For that matter, we might assume this is also the case in some instances here in our country.

Nonetheless, it is people like these who knowingly or perhaps unknowingly, undermine and tend to destroy our form of government. We, who boast of religous freedom as one of the cornerstones upon which this great Nation was built, cannot afford to tolerate such attacks on our basic democracy.

People of all faiths have joined in their denunciation of this desecration—Jews, Catholics, and Protestants throughout the Nation have expressed their indignation of these attacks. And I believe that now, after the Members of this House have conveyed the feeling of the American people to the rest of the world through the passage of House Concurrent Resolution 465, some action, in the form of strong, effective legislation should be enacted.

Oceanography: Jules Verne 1960

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, these days we are overwhelmed, almost on the hour every hour, by the announcements of advances of one sort and another occurring throughout the world in the various scientific fields.

Mostly these advances are in terms of the relative competitive status of the United States and the Union of Soviet Socialist Republics. Mostly they seem to be in the fascinating field of space science. Sometimes they are exciting stories of man's battle against nature for greater knowledge of the earth by wresting secrets from the rarefied atmosphere of untamed, soaring mountain peaks.

More and more, but still too seldom, do we hear of the exploits of brave, inquiring men delving into the mysteries of the oceans that comprise more than 70 percent of the earth's surface.

It is generally accepted, but not fully appreciated, that life on this planet has developed from the seas. National economies have grown around their perimeters. Systems of security have been based upon mastery of the oceans—on the surface and below.

Yet we know so little of this vast natural region of great potential.

Mr. Speaker, in recent weeks the U.S. Navy has performed a feat of historic significance with the descent of a manned bathyscaph to the bottom of the ocean in one of its deepest areas. The famous Swiss scientist Jacques Piccard, and U.S. Navy Lt. Don Walsh, descended to the bottom of the ocean deeper than any men have ever gone before. Their trip downward—37,800 feet—exceeded by more than a mile and a half the grueling upward climb of Sir Edmond Hillary and other brave men who have scaled the 29,000-foot eminence of Mount Everest in the Himalayas.

The story of the magnificent feat of the aquanauts of the bathyscaph *Trieste* is important reading for everyone.

I include the following article from the Washington Sunday Star of January 24, 1960, at this point in the RECORD:

TWO NAVY MEN IN BATHYSCAPH DESCEND 7 MILES IN OCEAN FOR NEW DEPTH MARK

Two Navy scientists descended in a bathyscaph yesterday into the deepest hole in the ocean, more than 7 miles down in the chill and dark bottom of the Pacific off the island of Guam.

Last night the Navy said Jacques Piccard, of the famous Swiss scientist family, and Navy Lt. Don Walsh had given their first report of what it was like to sit for half an hour 37,800 feet down in the Marianas Trench, deeper than any man has gone before.

The Navy relayed the following description, based on an early report from the two men after the bathyscaph *Trieste* had surfaced 210 miles southwest of Guam shortly before 1 a.m. (EST) yesterday:

"It was very cold at the bottom. Both were wet when they came out of the *Trieste* and their teeth were chattering. (Navy experts said they did not take this to mean the craft leaked.)

"They related that they had spent approximately one-half hour on the bottom and could see living and moving objects at 37,800 feet. The bottom was very soft and when they landed they stirred up silt and what they termed 'dust.' The lights were turned on as soon as the bottom was calm but it was a few minutes before they could see anything.

"They started down at 4:22 p.m. on January 22 (east longitude date) and reached bottom at 9:10 p.m. the same date, staying 30 minutes on the bottom and surfacing at 12:57 a.m. on January 23. This means that they took 4 hours and 48 minutes to descend, stayed on bottom 30 minutes approximately, and took 3 hours and 17 minutes to ascend and surface.

"They reported that they lost voice contact (apparently with the surface ships) about halfway down but that it was reestablished upon hitting bottom and maintained until about halfway up.

"The only food they ate was chocolate bars, one every hour, to keep up their energy.

"Upon surfacing, Lieutenant Walsh dropped a plastic container with an American flag on the spot of surfacing."

TWO HUNDRED AND TEN MILES FROM GUAM

The Navy located the position as 210 miles southwest of Apra Harbor, Guam.

Navy experts here said the men probably got wet while boarding the bathyscaph, or perhaps from condensation within the gondola as it descended into the cold water. In leaving the bathyscaph, the men had to climb up through a shaft which was still dripping from the water that had filled it during the dive.

The Navy said one purpose of deep ocean probes is to gather information on the transmission of man-made sounds. While the Navy did not spell it out, this information is important in the operation of sonar devices to detect enemy submarines.

Submarines use the thermal layers of different temperature levels to hide below the surface. A cold layer of water diffuses or entirely blocks sonar beams.

Comparatively little has been known of sound transmission below the comparatively shallow depths of the sea until scientists began descending thousands of feet below the surface.

Adm. Arleigh A. Burke, chief of naval operations, sent congratulations to the two men for their "valorous action in descending into the depths of the ocean farther than any other man."

"There is no whale in the world who has been so deep as you have," Admiral Burke added.

Admiral Burke said the accomplishment by Dr. Piccard and Lieutenant Walsh "may well mark the opening of a new age in exploration of the depths of the ocean which can well be as important as exploration in space has been in the past."

TEAM BROKE OWN RECORD

The team broke a depth record set only a few days ago, when the Trieste went down

to 24,000 feet in the same Marianas Trench, which parallels and extends beyond Guam.

Dr. Piccard and Lieutenant Walsh thus have been farther down below sea level than the highest mountain of the earth. Mount Everest, in the Himalayas, is slightly over 29,000 feet above sea level.

Records of the Navy Hydrographic Office and the National Geographic Society show the Marianas Trench to be the deepest hole so far discovered in long years of exploration from surface ships.

The Triest was built by Jacques Piccard and his father, Auguste. After its performance had been demonstrated dramatically by dives in the Mediterranean and nearby waters, the Navy bought the Trieste and engaged the younger Piccard.

The word "bathyscaph" means "deep boat" in Greek. The craft is a successor to the bathysphere, or deep sphere, developed by the elder Piccard for underwater observation. The bathysphere was merely a big hollow ball with portholes, lowered by cable from a surface vessel.

The bathyscaph weighs 75 tons and is loaded with gasoline and shot in even balance. When water is pumped in to replace air in end chambers, it sinks. When the tons of buckshot are released at the bottom of the dive, the buoyant gasoline brings it back to the surface. Propellers powered by electric motors provide some cruising and turning maneuverability.

Auto Dealers—Modern "Minutemen" of America's Economy

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. PUCINSKI. Mr. Speaker, may I call the attention of the House of Representatives to the fact that the National Automobile Dealers Association is currently holding its annual convention here in the Nation's Capitol.

I should like to express my own personal wishes for a very successful convention to these auto dealers, who I consider the modern minutemen of our national economy. I am delighted that many of the automobile dealers from my own congressional district are participating in this convention.

We all know that the automobile industry constitutes one of the most important aspects of American economy. These men, who have undertaken the difficult task of promoting the sale of automobiles, are performing a great service not only to the economic survival of the United States, but indeed the entire world. Few people stop to realize that every time an automobile is sold in this country, it touches off an economic chain reaction which assures employment for millions of Americans.

The automobile industry is undoubtedly one of the most competitive fields of free enterprise in this country. These men, who are participating in this competition as auto dealers, deserve the highest respect of all of us. Within the framework of free enterprise day in and day out, these are the men who manage to keep the wheels of American industry rolling.

I congratulate them for their great contribution and wish them profound success in their deliberations here in Washington.

Drinking in Planes Hit on Two Counts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most timely article which appeared recently in the Christian Science Monitor:

DRINKING IN PLANES HIT ON TWO COUNTS

(By Godfrey Sperling, Jr.)

CHICAGO.—"The public interest requires the elimination of all and any known potential factors which can be hazardous to air safety and commerce.

"Alcoholic beverages from time immemorial have never had a rightful place in this industry."

These are words of Clarence N. Sayen, president of the Air Line Pilots Association. Addressing himself to the need for legislation to ban drinking aloft, Mr. Sayen has this to say:

"The time and place concerning the use and consumption of alcoholic beverages historically has always been a matter of legislation by the appropriate authority whenever a threat to public safety, welfare, or a social problem is known to exist.

INSTITUTION RULES CITED

"For example, the consumption of alcoholic beverages has always been prohibited in schools or churches where it is socially or morally wrong or anywhere a safety problem is created.

"The modern-day aircraft crosses many municipal, county, State, and international boundaries in a single flight, making regulation by the normal method impractical. In our opinion, therefore, it falls to the Federal Government to protect the public interest in this matter.

"Unless this is done now, we fear that it will be done in the near future as the result of public clamor arising from a major air calamity caused by the irresponsible action of an inebriated passenger."

TWO REASONS GIVEN

In support of such legislation, Rowland K. Quinn, Jr., president of the Air Line Stewards and Stewardesses Association, has this to say:

"In our opinion, it is difficult to draw the line where an unruly obstreperous drunk becomes more than a nuisance and becomes a safety hazard.

"Because of the high density passenger load on an aircraft, we feel that it is appropriate to legislate on the basis of safety, obviously; and also that it is appropriate and in the public interest to legislate with an eye toward reducing the social nuisances or disturbances which are encouraged by this practice.

"If this service were eliminated from commercial air transportation we do not feel that any airline would suffer in the number of passengers it carries.

"If this legislation is passed we do not feel that any large segment of the traveling public will be hurt or deprived of essential service. On the contrary, a potentially dangerous practice will have been eliminated."

One Bad Apple

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. ULLMAN. Mr. Speaker, I want to insert in the RECORD another example of the commonsense which is so often reflected in the editorial columns of our independent small city newspapers. This editorial appeared in the East Oregonian, which is a daily published in Pendleton, Oreg., in my district. That its comments regarding the Idaho Power Co. are moderate and restrained will be recognized by anyone who has been involved in the continuing battle for full development of the Middle Snake River.

The editorial follows:

ONE BAD APPLE

Under the best of conditions the fish versus dams controversy in the Columbia River is laden with explosives. The reasonable people in the middle are constantly trying to keep the extremists under control. The extremists are those at one end who would build big hydroelectric dams on all streams without concern for fish and those at the other end who would discontinue all building of dams.

One could not blame the people who want to keep a tight lid on this explosive laden controversy if they ordered some Idaho Power Co. officials to face a firing squad. Idaho Power Co. is making it terribly tough on the peacemakers.

It started last year when thousands of fish died at Idaho Power Co.'s Brownlee Dam on the Snake River because the company had not adequately prepared to get the fish past construction work on the dam. Because consultation with aquatic biologists could have prevented the catastrophe at Brownlee, public reaction was that Idaho Power Co. just didn't give a hang about the fish.

Now, the Federal Power Commission is holding hearings at which plans for passing fish at Brownlee Dam and two other dams Idaho Power Co. intends to build, Oxbow and Little Hells Canyon, are under discussion. An Idaho Power Co. spokesman got things off to a fine start by suggesting that the cost of facilities that would safely pass the fish would be so large it might be better to forget it—cost to consumers of power produced by the dams would be much less if fish passage facilities were not built, so why build 'em?

Public utilities that are as shallow as this in their understanding of public relations give all public utilities a bad reputaton, which many do not deserve. It's the old story of one bad apple in the box spoiling all the others.

Idaho Power Co. has run roughshod over all opposition in the State of Idaho for years. The influence it has over the economy of Idaho must frighten some good people in that State.

But Idaho Power Co. is working outside its bailiwick now. What it does at Brownlee, Oxbow, and Little Hells Canyon is the concern of many people outside the State of Idaho. That Idaho Power Co. has not recognized that is painfully evident.

The Russian Economic Offensive: Meaning and Intent

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 3, 1960

Mr. BENTLEY. Mr. Speaker, there have been many views expressed these past 2 years with regard to the economic competition that the Soviet Union is supposed to be generating against the United States. Most, if not all, of the familiar views are based on the assumption that the Soviet Union is a national entity comparable in character and nature to this country.

One obtains an entirely different picture of the problem when the economic analysis is properly placed in the context of political reality. A recent article appearing in the Free World Forum under the title of "The Russian Economic Offensive: Meaning and Intent" presents an analysis on the basis of the Soviet Union being an empire economy with Russian Moscow at the helm. Written by Dr. Lev E. Dobriansky, who is a professor in Soviet economics at Georgetown University and also chairman of the Ukrainian Congress Committee of America, the article critically evaluates most of the standard views on the subject and casts an analysis in the light of Russia's exploitation of the economic resources of the many captive non-Russian nations within the Soviet Union.

In combating Moscow's economic cold-war strategy, the thesis advanced by Dr. Dobriansky offers a number of interesting possibilities. Because the different perspective and analysis contained in this article merits the attention of our Members, I include it in the RECORD, as follows:

THE RUSSIAN ECONOMIC OFFENSIVE: MEANING AND INTENT.

(By Lev E. Dobriansky)

There is as much fallacious thinking in this country about the so-called Russian economic offensive as one finds about the motives behind Moscow's cultural exchanges and exhibits. The fallacies stem ultimately from our protracted inability to grasp and comprehend the totalistic nature of traditional Russian cold-war activity. We Americans do not think in totalistic contexts with an eye constantly affixed to all the interrelated parts and components. Our reasoning processes tend generally to concentrate on the isolated event, the piecemeal and the single development, seemingly unrelated to other developments which are different either in type or spatial location. From an intellectual point of view, this incapacity to match the totalitarian character of characteristic Russian political thinking may well be regarded as the root cause of our failures to meet the cold-war challenges posed by Moscow, including the ostensible economic challenge.

Economists dealing with this subject are notorious for their vacuous interpretations. Although it is true that foreign exchange considerations, the requirements of the 7-year plan, and certain raw-material shortages are factors which must be carefully weighed in any assessment of Moscow's economic offensive, these factors are, nevertheless, only facets of a broader context of thought and operation. Indeed, I cannot realistically conceive of any Russian action, irrespective of its nature, being without a basic political motivation and an objective. So it is in the economic sphere. For a realistic appraisal one cannot even begin to analyze this offensive without a preliminary, steady awareness that the economic constitutes only a means for higher Russian political ends. The unfortunate fact is that no such awareness characterizes the utterances and statements of many American leaders in business and government.

Starting at an extreme, Cyrus Eaton, for example, views Moscow's offensive as a stroke of "peaceful competitive coexistence" which we must accept as any businessman would in his given industry. The folly of this point of view cannot be too strongly emphasized. This is the appropriate view which Russian propaganda seeks to disseminate. This year I had an opportunity to talk to a number of American businessmen and industrialists who, like Eaton, hold this point of view. They see the challenge as an economic duel without realizing that the duel is of a broader and different character and that the economic is only another weapon in the struggle. In short, with this primary and indispensable perspective, the total offensive, of which the economic is only another and, at that, a less important phase, is really neither peaceful nor fairly competitive, and certainly not coexistent.

By dangling the prospect of a $3 billion market for U.S. goods in the Soviet Union, Mr. Eaton cannot fool too many people as to the type of so-called economic competition confronting us. The fact is that Moscow's economic competition is vastly different from our challenges in the past. Despite the existence of similar ingredients of political determination, German and Japanese economic competition prior to World War II was pursued far more in accord with the canons of international trade than one can ascribe to Russian economic competition. Basic economic considerations of comparative costs, material shortages, foreign exchange scarcity and going markets weighed far more heavily than in the present case. Thus, when Phillip Cortney, chairman of the U.S. Council of the International Chamber of Commerce, speaks of establishing trade relations with the U.S.S.R. under ICC rules, he is unwittingly exposing himself to endless talks which will be designed by Moscow to change these rules (Chamber of Commerce Weighs Trade Talks With Soviet, UPI, Aug. 20).

Another fallacious view is that by seeking trade and extending aid, Moscow is seriously aiming at a lessening of world tensions. The naivete of this view compares equally with the previous one. Again, the view is expressed in a void of fact and cold war reality. As we shall see, the very opposite is the case. Both trade and economic aid are Russian expedients for the deepening and creation of tensions that would accommodate Moscow's imperial expansionism. On the economic front, various techniques are employed to bring this about.

Another notion frequently discussed is that by trading with the Communist empire, we would reap many economic advantages, proving that our system is superior and laying a firm base for understanding and peaceful relations. All of the elements of this argument are to a greater or lesser extent specious. With a monopolistic trade-control system, Moscow has the first advantage. It is illusory to believe that any net economic advantages in terms of trade would flow in our direction. What might appear as a gross advantage to a particular firm here may well be of double advantage to the development of the empire's economic system where real costs in effort and lives are by far not as determinative as here.

Those who speak of the need to demonstrate the superiority of our economic system disply either their ignorance of our and the totalitarian Russian systems or their complete vulnerability to Russian propaganda bluffs. On November 22, 1957, Khrushchev boasted that "the treat to the United States is not the ICBM but in the field of peaceful production. We are relentless in this, and it will prove the superiority of our system." Apparently, too many Americans, ignorant of the functioning of our system and little conversant with the perpetual war economy of the U.S.S.R., took this grandiose statement to heart. This is not the first time that Kremlin leaders have boasted in this vein. Moreover, any intensive analysis of the two systems shows that the question of superiority is an academic one. In terms of human and civilized values, there exists no need for us to demonstrate the superiority of our system.

Paradoxical as it may seem, some of our industrialists and popular writers are even more deterministic in their economic thinking than the alleged Marxists in the Kremlin. In fact, there is very little, if any, Marxism involved in the behavior and actions of the new Russian imperialist class. The claim that trade lays a firm base for understanding and peaceful relations is, to a great degree, a myth. In this century Germany and Great Britain were the best of customers and yet this relationship failed to produce peaceful relations between them. In relation to Moscow, the determinism implicit in this argument is hardly applicable. Moscow considers trade insofar as it abets the development of its colonial economic system and enables it to further its objectives in the free world; individual entrepreneurs in the free world are not motivated by such totalistic ends, which are essentially political in nature. Trade relations with a complete state monopoly are hardly grounds for understanding the many peoples and nations in the Soviet Union. Were such an understanding achieved, proponents of this specious argument would then begin to understand why we should not trade with the Moscow monopoly.

There are even some among us who view Russian economic aid as an attempt to build up genuine good will for the new regime in Moscow. Others go further to impute humanitarian gestures in Moscow's actions. The most that one can say is that evidently there is no limit to wishful thinking. Aside from these analytical comments, it is a wonder that some of us do not pay heed to the observations made by the present leaders of the new ruling class in Russia. In 1955, for example, Khrushchev openly stated that "we (the U.S.S.R.) value trade least for economic reasons and most for political purposes." This observation is well substandiated by all the essential facts of the so-called Russian economic offensive. Our trouble is that we fail to view this offensive in perspective and with factual and interpretative background. If we fail to see Russian actions in toto, we shall fail to understand any individual one of them intelligently.

THE PICTURE OF RUSSIAN AID AND TRADE

Russian aid and trade is, of course, only a part of Moscow's cold war operation. This is, by far, not the most important part; however, it reflects an activity which contributes to Russian efforts in this main bout against the Free World. Those who are preparing to avoid or to win in this struggle cannot be said to be aware of the realities of the fight in which we are engaged. Moscow's strategy and tactics are not new, nor are they peculiarly Communist. They are perfectly in tradition with the empire-building techniques of old Russia. They appear new to many who are unfamiliar with the history of

the Russian Empire, both past and present. The economic picture reflects these old techniques. The shell-game method of "now you see it, now you don't" manifests itself in the economic sphere as in any other. And so it is with other methods.

Considering first the aid part of the picture, there are heavy elements of exaggeration and misplaced thought. The empire, including China, has up to the end of 1958 allocated some $2.2 billion for foreign aid. The Soviet Union presumably has contributed over a billion, and the remainder has come from the so-called satellites. Much of this is still on paper since only about $900 million of goods and services have actually been tendered. China, in contrast to the Soviet Union, has extended about $647 million in aid in the form of grants mostly. Loans over long varying periods and at a low 2½ percent interest feature almost all U.S.S.R. aid. Moscow's aid to China over the past 5 years has approximated $430 million in loans. The so-called satellite nations in Europe, which are supposed to be extending "independent" aid, follow the loan basis technique at interest charges ranging as high as 5 percent.

Aid dispensed by Moscow is not a handout. It is naive to think that such aid is not without strings. Where any form of economic dependence comes into being, strings are inevitably attached. Even without the appearance of such dependence, Moscow sees to it that political strings are immediately attached to indigenous elements. But what is most significant in the picture of Moscow's economic aid is that about 95 percent of it goes to countries near the borders of the Soviet Union. Afghanistan, Iraq, India, Burma, and Indonesia are relatively close and strategically situated for Russian solicitude. Meager as it is, such Russian aid is an economic penetration in conformity with imperial Russia's old borderlands policy which today points at the entire southern and southeastern Asiatic spheres.

Russian economic penetration is the opening wedge for more important political and psychological infiltration. The minor $133 million credits extended to India were so exaggerated that many throughout the world received the impression of a major economic assault upon the free world. Steel mills are being built in greater aggregate value by the West Germans, Americans and the British in India, but popular impression has it that Moscow almost dominates this field of aid. The psychological and propaganda value of the Russian-supported Bhilai steel mill is incalculable. Percentagewise, U.S.S.R. trade with India has soared fortyfold over the past 7 years; yet, the near half billion rupees of trade make up only 2½ percent of India's total foreign trade. It is obvious, then, that Moscow's aid and trade contribution in the direction of India is thinly marginal, as it is in all other areas. The value of this contribution, however, is by no means an adequate measure of the actual penetration made by Moscow in this part of Asia. As Khrushchev said, the valuation must be made most "for political purposes."

In India and elsewhere, Moscow's economic penetration unavoidably means the infiltration of men and ideas, the formation of cadres under pretense that projects could be operated and managed only by technicians from the Soviet Union; it means preparing the ground for a trade imperialism which would contribute to the political isolation of the country involved in preparation for the eventual takeover. Here, too, the technique is not new. The Russian Communists used it with perhaps less vigor in connection with many now captive non-Russian nations, including those in the present Soviet Union; before them, the czars made use of economic means and slogans to create dissension in neighboring countries.

The President of the United Arab Republic recently sensed this sequence of events and is now leaning more toward economic sources in the free world. Egypt alone has been promised some $500 million aid by Moscow over a 12-year period at 2½ percent interest. Its trade with the Soviet Union has increased 10 times in the past 2 years. Last year, about 60 percent of total Egyptian exports were taken by the Communist empire. Egypt's experience in 1957, when Moscow bought up the bulk of its cotton at a high price and resold it in Western Europe at low prices, revealed in part the designs of the Russian economic offensive. Moscow's aim is clearly to attach the U.A.R.'s economy to the Communist empire's. Without the normal supplies of foreign exchange, the U.A.R. would have to turn, as indeed it did, to Moscow for oil, textiles, ships, and mining equipment. Like others, the Egyptians are beginning to recall the old adage, "Timeo Danaos et dona ferentes" (I fear the Greeks even bearing gifts).

Different manipulations by Moscow are noticeable in other areas, too. Syria, the other part of the U.A.R., received credits up to $167 million when Moscow moved in, particularly during the 1958 crop failure. To further this aid, Moscow has had its planes photograph the entire area, thereby gaining considerable military value from the transaction. In Iraq, recipient of about $138 million credits from the U.S.S.R., the same story is being repeated. The political consequences of this story of infiltration and reconnaissance are yet to be witnessed in full. Whether the initial links are by aid or trade, Moscow will develop some means for political infiltration of the target country. It did not hesitate to violate its trade pact with Finland in order to produce a change in the hard-pressed Finnish Government. Iran and Yugoslavia were unsuccessfully subjected to similar pressures. To show favor toward the Arab world, Moscow shifted its demand for oranges from Israel to Morocco. It placed its wool orders with South Africa instead of once-favored Australia to display its displeasure over the asylum given to escapees from the Communist empire. Just recently, Moscow moved in quickly to offer Bolivia a credit of $40 million for a 40-year period when signs of a U.S. refusal for further aid appeared. The very offer can serve to intensify the political division and tension in that country.

An astute examination of the economic facts pertaining to any country with whom the U.S.S.R. has such relations will reveal some actual or potential political value which Moscow considers of greater importance anyway. The economic data in themselves show that both aid and trade by the Soviet Union are meager and marginal. Total U.S.S.R. trade with the free world is not more than that of Switzerland, approximately 1 percent. A fact that most Westerners seem to overlook is that trade by the Russian Empire, whether of the past or present, has always been small. Empire self-sufficiency is a traditional policy observed by Russian autocrats right down to the present. The Soviet Union is making no great sacrifices in its aid and trade program. Needless to say, the imperial economy of the U.S.S.R. comes first. Despite these truths, however, the danger in the Russian economic offensive rests in its political ramifications. The economic offensive as such, measured in goods and services, is thin and harmless. What is of perilous import to the free world is Moscow's political capitalization of its marginal economic inroads.

In 1958, U.S.S.R. world trade amounted to $8.5 billion. Of this, only a little over $2 billion was with the free world and, significantly, half of this amount was with NATO countries. For our purposes here, there are two points of significance in this distribution. One is that the only NATO country for whom this trade assumes marked proportions is Iceland. Its trade with the U.S.S.R. averages about one-quarter of its total world trade. The higher this goes, the greater the vulnerability of the country's economy to shock and dislodgment once Moscow exercises its leverage for political ends. In this respect, there is little to be concerned about the other NATO countries, including Great Britain with its 5-year trade pact with Moscow. Aside from Egypt, much the same observation can be made in connection with U.S.S.R.'s trade and aid activities in Africa. So far, much of it has been small. But Guinea's trade with the Communist empire has soared to about 30 percent of its total trade.

The second significant point to bear in mind is that this expansion of trade with the economically advanced countries also is not new with regard to aim and purpose. Essentially, it repeats the pattern of the 1930's. With the goals of the present 7-year plan reaching even unrealistic heights, Moscow seeks to obtain goods necessary to the fulfillment of its plan. The Russians have always been expert copyists and much of their progress in many fields has been due to technological imitation. As before, the prospect of a drastic cutoff in such trade should not be ruled out. Consumer goods represent the lowest priority rating in U.S.S.R. imports. There are some 900 nonlicensed commodities available to Moscow from the United States, but one can rest assured that this category will hardly be tapped. As shown by its trade pact with Great Britain, Moscow is primarily interested in chemicals, synthetics plants, new types of machineries and similar producers' goods.

MEANING, INTENT AND METHODS OF COUNTERACTION

From this picture, the meaning and intent of the so-called Russian economic offensive should be quite clear. There is every logical justification for one to view the aid and trade, issued from any sector of the Communist empire, as a calculated effort determined ultimately by Moscow. The effort is made to the largest extent with captive resources in this empire. This includes the Soviet Union and the captive resources represented there by the subugated non-Russian nations. It is vital to bear this fact in mind for purposes of propaganda counteraction. I had the privilege of both planning and writing the Captive Nations Resolution which caused such an outburst in Moscow during Vice President NIXON'S tour in the U.S.S.R. To those who say that without the outbursts by Khrushchev, the resolution would be little known, I say that his reflexive action could not have been otherwise. For the first time, our Government recognized the existence of all the captive nations in the U.S.S.R. The reader need not think twice how Russia would appear, not only in the economic but every other sphere, if we built our propaganda and informational output on the basis of this basic fact. With the exploitation of rich resources in the captive non-Russian sectors of the Soviet Union, Russia's development would not be held in the same light among the underdeveloped countries as it is when we fallaciously synonymize the U.S.S.R. with Russia.

Nevertheless, Moscow's prime consideration is the economy of the empire. The economy is being employed both for the purposes of accelerating the empire's economic growth and, concurrently, gaining political leverage in every conceivable part of the free world. To achieve the first, Moscow has to take care and be cautious with its manipulations of aid and trade. The field is not wide open for reckless and irresponsible action which may well backfire concerning its first

purpose. In the matter of commodity dumping, for example, Moscow itself would suffer from such action and the volume of exportable commodities is usually inadequate for it to do any serious harm in the pattern of world prices. Moreover, it cannot afford for long to delay on its promises and to provide inferior goods without developing an unwholesome reputation in the eyes of those least familiar with its techniques. It took Moscow a full year to deliver oil to Brazil. So far, the promises have been long and the deeds short. The propaganda and political value has also far exceeded the nominal value of the promised aid and trade.

If we watch the political ramifications of this so-called economic offensive, there is no reason for us to fear in the least any strictly economic offensive from Moscow. Without at all simplifying the situation, this operation repeats an old story: namely, with little means Russian political cunning can reap greatly disproportionate gains. As Mikoyan has said, "A modern Communist is one who has the zeal of a Bolshevik and the practicality of a capitalist. "To which one may add, "The modern Communist is truly the heir of Peter the Great's legacy." For the differences between the two are really accidental and not substantial. After all, an empire, unprecedented in numerous ways, was built by these methods.

The methods of counteraction require the combination of economic, political, and psychological techniques. To show the diminutive size of Russian economic strength without the captive resources both within and outside the Soviet Union would undoubtedly produce a major score. Close cooperation among the democratic countries in fashioning new techniques to outbid Moscow is another practical avenue for our efforts. Western Germany has taken a lead in this respect and with much success. For political value, where it becomes necessary, uneconomical deals should be indulged in by taking surpluses from one area and contributing them to another. Also, a more liberalized foreign economic policy should be developed with the aim of expanding our imports from the very areas that Moscow shows its deepest concern in. These and many other methods can be utilized profitably to prevent the Communist empire from capitalizing politically on its marginal economic inroads. Their selection and use, for the ends in view, presuppose always the broader framework of interpretative understanding suggested earlier. To understand truly the Russians, it is first necessary to understand their understanding of these things.

Portage Park Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. PUCINSKI. Mr. Speaker, recently I had the pleasure of attending the installation of new officers for the coming year who will head the Portage Park Chamber of Commerce in my district.

The newly elected president is Mrs. Ruth Melville, the first woman to be elected as president of a local chamber of commerce in the history of Cook County.

The Portage Park Chamber of Commerce has made a significant contribution toward the growth and progress of a large portion of my district. The members of the chamber, who are all businessmen, have, through their participation in this organization, demonstrated that the small businessman is the keystone of progress in a community.

I will not attempt to elaborate on the tremendous contribution these businessmen have made toward making my district a better area in which to live; but I do want to express a deep concern that this Nation is indeed losing a valuable tool of democracy by driving the small businessman out of business in ever-increasing numbers. I feel strongly that it is our duty, as Members of Congress, to recognize the fact that it is becoming increasingly more difficult for the small businessman to exist in the face of mounting competition from large corporations.

I am enclosing in the RECORD the remarks delivered by Mrs. Melville as she assumed the important position of president of the Portage Park Chamber of Commerce. Her remarks are significant not only because she is the first woman to assume this important position in a local chamber of commerce in the Chicago area, but also because they give us an insight of how keenly she and the other members of the chamber recognize their responsibility to the community. I would like to take this opportunity to extend to the Portage Park Chamber of Commerce my own congratulations on their excellent choice of president and also to wish the organization unprecedented success in the coming year under the leadership of Mrs. Melville.

Mrs. Melville's comments follow:

PORTAGE PARK CHAMBER OF COMMERCE, RUTH MELVILLE, PRESIDENT, JANUARY 16, 1960

Installing officer, master of ceremonies, distinguished guests, members of the Portage Park Chamber of Commerce, and friends, a deep sense of honor arose within me as I accepted the gavel of responsibility as your president. Never before has my humility asserted itself more strongly than now as I stand here tonight before this gathering of business and professional people.

Fully aware of the duties entrusted to me, I am stimulated by hope and ambition as I see a dawn of opportunity to offer service and helpfulness to my fellow members and community.

It is my earnest desire to follow the path of leadership so well blazed by my competent predecessors, and I will be ever mindful of their successes that have strengthened and developed our business area.

We are looking forward to another year of progress. Our keywords will be service and action as our organization goes ahead in 1960, with constant effort to work together in harmony and friendship, promoting a stronger bond of unity.

In keeping with the planning sessions of our new officrs and directors a positive approach will be emphasized in carrying out a comprehensive platform of projects designed to expand and develop the prosperity of Portage Park's business district putting it second to none in all Chicagoland.

We are pledged to redouble our efforts for off-street parking space and concentrate on greater use of our existing facilities. Expediting traffic and better traffic control to eliminate peak jams will be sought, along with improved street lighting, neighborhood conservation, and the growth of better customer relationship, through a program stressing courtesy and service. We will continue to have forceful promotions throughout the year accenting the advantages of shopping in our stores.

An innovation will be the addition of a community service program, designed to bring the chamber of commerce into closer relationship with service organizations such as the Kiwanis and Lions Clubs, veterans' units, and other community groups, thereby gaining much for us in the way of good will among our customers and proving that even the tenor of commerce can be tempered with a helping hand.

To achieve our several goals, active committees will be formulated with a specific understanding of their duties, and with the continued cooperation of our members the Portage Park Chamber of Commerce will go forward in 1960.

And now I would like to acknowledge my sincere appreciation to Mr. Hill, our installing officer, for the gracious manner in which he performed his duties, Mr. Levey, our master of ceremonies, who always adds so much to our festive occasions, and last but certainly not least, Mr. Christophill and his committee, for their delightful party arrangements. To each and every one present, thank you for being in attendance on this memorable January event, may you all enjoy to the utmost the dancing and entertainment.

I am so pleased and happy to have my family, Jimmie and Sherri, Mr. Workman, my employer, Congressman Pucinski, Alderman Cullerton, State Representative Fio Rito, Mr. Paul Salinar, and such a splendid representation from our downtown office with me this evening.

In closing, may I add it has been a real privilege and pleasure to serve my fellow officers and directors as executive secretary last year, and I solemnly pledge to serve as president to the very best of my ability, doing everything possible to be a credit to the members of this outstanding organization who have placed their confidence in me.

Thank you again from the very bottom of my heart.

A Report on Alcoholic Rehabilitation

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. POFF. Mr. Speaker, pursuant to permission granted me, I am inserting into the Appendix of the CONGRESSIONAL RECORD a report on alcoholic rehabilitation, by Mr. Robert J. Conner, Sr., director of probation, municipal court for the District of Columbia, Washington, D.C. This study points out the fine work that Mr. Conner is doing, and I was most impressed by the progress that he is making in the field of alcoholic rehabilitation.

The report follows:

To: Hon. John Lewis Smith, Jr., chief judge, municipal court for the District of Columbia, Washington, D.C.

From: Robert J. Conner, Sr., director of probation, municipal court for the District of Columbia, Washington, D.C.

Subject: Report of the alcoholic rehabilitation (expanded) program in the municipal court for the District of Columbia covering the first year of operation—September 19, 1958, to September 30, 1959.

Authorities report that the disease of alcoholism is claiming 200,000 new victims each year. The destruction it wreaks cannot be measured in dollars or cents or in human values.

The U.S. Public Health Service ranks it only below cardiovascular diseases, cancer, and mental illness as a menace to public well-being.

Despite the fact that one-half or more of the victims of this disease can be rehabilitated, provided they can be convinced that they can be helped, and provided they can be persuaded to recognize their condition, the fact remains that only a minute fraction of alcoholics are being reached.

Many years ago society punished the drunk with the ducking stool, the lash, the public cage or stocks, and even poured molten lead down his throat.

Today these forms of punishment have been replaced by arrest and jail. Yet year after year this method has produced no results.

Alcoholics Anonymous had its inception in 1935. As of today, hundreds of thousands of victims of alcoholism have been rehabilitated by and through the fellowship of Alcoholics Anonymous.

There is hardly an alcoholic project working today that does not request and receive Alcoholic Anonymous help. Practically every community approach, every educational project and every rehabilitation program recommends Alcoholics Anonymous teachings, philosophy, and counsel and advice to alcoholics. The sole purpose of Alcoholics Anonymous is to keep its members sober and help other alcoholics achieve sobriety.

It has been said that if a program doesn't work with Alcoholics Anonymous then the program has no valid treatment.

Since 1946, the municipal court for the District of Columbia has been associated with Alcoholics Anonymous in a program to reclaim problem drinkers.

When two men, in 1939, called on one of the municipal judges, he found that they discussed the problem of alcoholism from personal experience and not theory. Each admitted frankly that he had a history of compulsive drinking but each was undeniably sober. The judge often said he was impressed with the sincerity and philosophy of his two visitors.

At that time, however, the judge was seeking a remedy for a congested court docket and he wanted a mass production method of dealing with persons charged with drunkenness. His two callers insisted that compulsive drunkenness was an individual problem and there was, therefore, no formula that could be applied to all.

In 1945 the judge called Alcoholics Anonymous and two members answered and they and a probation officer discussed at length the increasing number of persons appearing in court charged with intoxication. Their meeting resulted in an experiment to offer Alcoholics Anonymous to at least some of the prisoners.

On December 24, 1945, the first probationer under this experiment was referred to the probation department.

The experiment encountered many trials and tribulations, but time proved its worth and effectiveness.

Probation rules required a weekly report in person and on Saturdays Alcoholics Anonymous members began to meet with these probationers when they reported and discussed their problems and the opportunities offered by the Alcoholics Anonymous program.

These small informal meetings grew, and finally the group met in a small room in the courthouse. This proved popular and grew and eventually a courtroom was made available for the gathering.

Basically the meetings in the courtroom on Saturday were opened and closed informally in contrast to regular Alcoholics Anonymous groups. At each meeting it was announced that the meeting was not an Alcoholics Anonymous meeting, but simply a meeting about Alcoholics Anonymous. It was always stated that the meeting was not a part of probation but devoted to giving information and was an invitation for each present to affiliate with an Alcoholics Anonymous group of the individual's choice.

The court program proved its worth and in 1956 the Karrick report focused attention on facts and statistics heretofore unknown or where known had been ignored. The report also pointed to the need for expanding the then existing program with emphasis on the success it had accomplished.

Briefly, the expansion was authorized, personnel engaged, and on September 19, 1958, the new expanded program was begun.

Many trials and tribulations were experienced during the early days of expansion. At the beginning, men who had been arrested for intoxication and lodged in the cellblock of the district court awaiting appearance before a judge, were interviewed in that cellblock at 7 a.m. each morning for the purpose of attempting to select men likely to be helped by the program. The overcrowding, noise, turmoil, lack of proper facilities, and environment for interviewing was very apparent and clearly indicated the need for a change. After a period of time this method was discontinued.

At the present time a system has been developed and put into effect and, although simple, accomplishes the purpose for which it was established.

The following résumé explains the technique now in effect:

When a defendant appears in municipal court before one of its judges and charged with intoxication, and who either pleads guilty or is found guilty, one of the probation officers assigned to the alcoholic rehabilitation unit and working with the court, presents to the judge a copy of the individual's arrest record. The probation officer makes a quick evaluation of the defendant standing before the court, both from his record as well as his appearance and conduct, and if there is the slightest indication that the individual might benefit from the alcoholic program, a request is made that the individual concerned be interviewed by another probation officer assigned to the unit. When the probation officer interviews the man, he does not sit in judgment, but in reality, merely talks with the man from the standpoint of obtaining, so far as possible, an indication as to the honesty and sincerity of the individual with regard to his drinking problem. If the individual expresses a desire to help himself and do something about his drinking problem, it is explained that it will be necessary for him to return to the District of Columbia jail for a period of 3 to 5 days or more, if necessary, in order for him to sober up and "dry out," get cleaned up, and get himself back into a mental and physical condition so that he can be helped and can understand what will be offered to him in connection with the program offered by the court.

After expressing an interest in helping themselves, they are then again brought before the court, at which time the probation officer handling this particular phase of the program requests that the individual's case be continued for the number of days deemed necessary for proper "drying out."

We have in our department of corrections, so efficiently operated by Mr. Donald Clemmer, a system by which drunks are returned to the court. Mr. Clemmer and his staff deserve much credit for the manner in which they handle this situation. The change in these people when they return from the District jail is almost unbelievable. Physically and mentally, they are in much better condition than had they been released from another type of institution. The District of Columbia is indeed fortunate to have a director such as Mr. Clemmer and his staff who are able to implement so complex a program.

At approximately 7:45 a.m., on Tuesdays through Fridays, one of the probation officers goes to the cellblock, and those men who have been "dried out" are then taken to a courtroom which has been assigned for the exclusive use of this program.

This courtroom, which is air conditioned, is comfortable, clean, and these men find themselves in a relaxed environment.

Two of the probation officers who understand the problem from personal experience speak to these groups and explain the details of the court program as well as the program and operation of Alcoholics Anonymous. They speak the language that is so necessary and important at this particular stage. Usually three to five members of Alcoholics Anonymous also speak to these groups. They give of their time and energy voluntarily. Perhaps this program works as well as it does because these members of Alcoholics Anonymous give unstintingly of their time and energy and their advice is based upon personal experience.

At the conclusion of these explanations and talks, the groups are offered the program, but only after they have heard all the facts and all that is offered to them. They are permitted to make a decision as to whether they want to accept or reject the offer and no coercion in any form is used.

They are advised that in accepting the program only one thing is asked of them in return. That is an investment of 1 hour of their time to attend a meeting about Alcoholics Anonymous which is held at 9 a.m. every Saturday morning in courtroom 19 of the criminal division of the municipal court or a meeting held Monday evenings at 8:30 p.m. in a courtroom located in the civil division of the municipal court.

It is emphasized that the work of the court in this field is not carried on as a group of Alcoholics Anonymous, but that the principles and philosophy of Alcoholics Anonymous are applied.

Upon acceptance of the program, these men appear before the court and on recommendation of the probation officer handling these affairs, they are released on personal bond.

After appearing in court, these men are then interviewed individually by probation officers assigned to this unit and certain personal data is recorded for record and statistical purposes. When necessary, referrals are made for temporary food and lodging. Employment placements are made frequently and much employment counseling is done. The office is open every afternoon for the purpose of permitting these men to discuss personal and other problems which is so necessary for an individual in this category. Referrals for clothing are made when necessary. We are deeply appreciative of the excellent cooperation afforded us by the municipal lodging house, operated under the capable direction of Mr. Henry Koch. The Salvation Army harbor light program directed by Envoy Morgan as well as the excellent cooperation of the staff connected with the newly organized employment counseling service. We are also indebted to the Alcoholics Anonymous home, the Central Union Mission, and the Volunteers of America. There are many other community agencies and organizations to whom we are indebted for excellent cooperation and assistance.

Many of those we are attempting to help are referred to various hospitals in the area for medical care when necessary. Careful interviewing and screening has detected a number of active tubercular cases which are referred to hospitals for treatment. In several recent instances the work of the personnel resulted in the detection of mental patients who had escaped or eloped and these men were returned to hospitals from which they escaped.

One of the interesting highlights of the Monday evening meetings is the fact that they are conducted by men who obtained sobriety through the court program. These men make a tremendous and valuable contribution.

It is also heartening to observe the wives, parents, and relatives who often attend these meetings. This not only lends encouragement to those concerned, but adds strength to the program, because it is not only reaching alcoholics, but is also reaching those affected by alcoholism.

Probation officers, making presentence investigations for the court, upon discovering the existance of an alcoholic problem, have been referring their clients to this program for information and help. The same is true of cases placed on probation and where a drinking problem is evident.

Other agencies, in allied fields, are referring men to whom the program is explained and in this manner learn about alcoholism and what can be done about it.

The alcoholic rehabilitation unit consists of three probation officers, a case supervisor, and a stenographer-clerk. Considerable of their time is spent in conducting and preparing presentence investigation reports and making field visits in connection with regular probation work.

Statistics are necessary in preparing reports that are required by and for the information of the court and the success of the expanded program for the past year can best be evaluated by the following:

Statistical report

Number of arrests by Metropolitan Police for intoxication and appearing in court Sept. 19, 1958, to Sept. 30, 1959:	
White males	9,659
White females	806
Total	10,465
Negro males	11,277
Negro females	1,168
Total	12,445
Total males	20,936
Total females	1,974
Grand total	[1] 22,910
Number of defendants screened by probation officers:	
In court	5,265
In cellblock	2,336
Total	7,601
Court dispositions:	
Not guilty	398
Personal bond—direct action of court	4,167
Personal bond—direct action of court after screening	608
Personal bond (quasi-probation) after screening	2,415
Probation (placed on program)	304
Total	7,892
Number placed on program (quasi-probation and probation)	2,719
Number rearrested	[2] 1,215
Number not rearrested	[3] 1,504
Percentage of success on program	[4] 55.32
Services rendered:	
number referred for temporary food and lodging	440
Number referred for employment referrance	204

Statistical report—Continued

Job placements as a result of direct effort	26
Medical referrals	14
Evaluation of estimated savings to taxpayers of the District of Columbia:	
Total number placed on program (probation and quasi-probation)	2,719
Total number rearrested	1,215
Total number succeeding on program	1,504
Total number of days those on program would have served, based on their past records, of average 25-day sentence, less 4 days average "drying out" period	31,584
Per capital cost per day at District of Columbia jail as per Karrick report	$2.86
Estimated savings to taxpayers on a first arrest basis only	$90,330.24
Estimated savings to taxpayers effected by overall program	[4] $260,660.40

[1] In addition to this number, approximately 40 percent of the total number arrested forfeit and do not appear in court.

[2] Many were not rearrested until months after going on the program, yet we consider them failures for purposes of statistics and monetary evaluation.

[3] We do not claim all of these individuals have remained sober, but rather, that they have not reappeared in court.

[4] Quasi-probationers would have been sentenced according to their past records, an average of three times. (Probationers placed on program were evaluated on a first arrest basis only.)

Most significant of these figures is that many of these individuals from the standpoint of society and their arrest records were considered, by many, as hopeless cases.

Any further expansion of the program will, of course, depend upon additional personnel in order to enlarge the scope of our activity.

Plans are now in the thinking stage for the further expansion of our activities in order to reach more alcoholics appearing daily before the court and suffering from this disease. Perhaps in the not too distant future we will be able to interview in the District jail those men who have been sentenced to a specific term and who evidence a desire to do something about their drinking problem. Perhaps we will be able to recommend to the court that the remainder of their sentences be suspended and that they be released on personal bond in order to take part in this program.

Perhaps in the future we will be able to expand our program to enable us to talk with men who are released after 60-, 90-, and 180-day sentences and who are returned to society without funds, in many instances without clothes, a place to live, no job, and no idea where their next meal is coming from. Perhaps we will be able to eventually help many of these men much in the same manner and along the same lines as those we are working with today.

The savings to the taxpayers is almost impossible to estimate despite the fact that the above statistics reveal a tremendous saving in this direction. Sufficient information is not available to replace or measure the intangibles of savings to welfare agencies, or to evaluate the results of new jobs, higher pay, taxes being paid, and above and most important of all, the salvaging of individuals, homes and families.

The program now in effect and its accomplishments are possible only because of the wholehearted cooperation of the Commissioners for the District of Columbia, the judges of the municipal court, the dedication of the director of probation and the personnel assigned to the unit. Without the unselfish devotion of Alcoholics Anonymous members and Alcoholics Anonymous, this program would not be possible.

Respectfully submitted.

ROBERT J. CONNER,
Director of Probation.

Murray Proposal for Destruction of Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 3, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a memorandum prepared by the former Atomic Energy Commissioner, Thomas E. Murray, on his proposal to dismantle the stocks of large nuclear weapons held by the three nuclear powers.

Mr. Murray first advanced his proposal in a speech delivered to the World Affairs Institute at Pasadena on December 9, 1959. Earlier this week the senior Senator from Illinois [Mr. DOUGLAS] inserted the text of this speech in the RECORD. I urge my colleagues to read this speech, as well as the excerpts which I am about to place in the Appendix of the RECORD.

Mr. Murray has given generously of his time and energy to the problem of how to control the nuclear arms race. I have not always agreed with him; but I have tremendous respect for his determination to continue to press for acceptable, realistic, and safe means by which the threat of large-scale nuclear war may be diminished and ultimately abolished. This new proposal of Mr. Murray's is one which could be worked into U.S. policy at the forthcoming general disarmament negotiations with nine other nations, to be convened in mid-March of this year. Since I understand the United States still has no policy regarding these talks, Mr. Murray's proposal is certainly one that should be given the most serious and careful consideration.

There being no objection, the excerpts from the memorandum were ordered to be printed in the RECORD, as follows:

REPORT OF THOMAS E. MURRAY REGARDING DISARMAMENT PROPOSAL MADE BEFORE THE INSTITUTE OF WORLD AFFAIRS, DECEMBER 9, 1959

I propose, as the primary and most necessary practical goal, that we negotiate an agreement with the Soviet Union to stop the perilous and irrational effort to maintain the balance of terror. An agreement to this effect would be as much in the Communist interest as in our own. Hence it appears as possible and practical.

This goal is limited, as all political goals must be. There would remain, both for the United States and for the U.S.S.R., the problem of maintaining a balance of power between the Communist world and the free world. This problem has as many aspects as the word "power" has meanings. In any case, it is a genuine political problem that can be rationally and successfully handled. A true balance of power, in all the many meanings of power is a necessary contributing element of world peace, whereas the present precarious balance of terror is nothing but an invitation to catastrophe.

Thus the proximate political goal is clear enough. It is a question, not of upsetting the balance of terror, which would entail serious risk, but of dissipating the terror itself.

Therefore the process whereby this limited political goal may be achieved is likewise clear enough. It is a question of initiating an orderly and controlled process of destroying the megaton weapons that have created, and still sustain the terror. The final details of the process are proper matter for negotiation, once the end in view is agreed on.

First of all, I think that any proposal, laid down by the United States as the basis of negotiation, should be kept clear, clean, and simple, free of the kind of detail that might give rise to resistance or bickering, whether on political or on scientific grounds.

For instance, we need not be particular about the composition of the international commission to supervise the dismantling of Russian and American megaton weapons. It is sufficient that the scientific staff be competent. It would be advisable to have them work under a political committee with the widest representation. What is chiefly important is that the work be done, as it were, under the eyes of all the world. Access to all the details of the operation should be open to all the media of communications.

The really essential question concerns the methods by which this proposal should be carried out. In the first place, the dismantling process should take place in stages. The first stage is an important one. Enough megatonage should be destroyed in it to affirm emphatically and at the outset a mutual seriousness of intent to end the era of terror. What would constitute such a quantity of megatonage? The immediate answer to this question may be reached by asking another. How many megatons would be sufficient to create, if exploded, a serious threat to civilization disaster on a scale intolerable both to ourselves, the legatees of Western civilization, and also to the artisans of the Communist world revolution?

The question is crucial. All experts agree that there is a limit to the amount of fissionable material that may be explosively released without creating this serious threat, both in terms of immediate destruction of life and property and also in terms of future radioactive fallout. Within this basic agreement there will doubtless be differences of opinion on the sheer arithmetic. However, it will be most important not to let a straightforward answer to a straightforward question get lost amid the endless niceties of scientific argument.

I once made an estimate myself, when I was a member of the AEC. My figure published in an article in Life (May 7, 1957) was 3,500 megatons. The figure was not challenged either at the time or subsequently. An amount of 3,500 megatons might well serve as the basis of the initial dismantling stage, which, under the agreement I envision, would cover a period of approximately 3 years. The United States and the U.S.S.R. would agree to hand over 1,750 megatons each to the international agency. It would be desirable for the United States to offer a substantial portion of its total share in the first stage—let us say 500 megatons—as its first consignment, to be matched by the Soviet Union.

It should be further agreed that the remaining 2,500 megatons will be delivered to the international agency in matching lots at prescribed intervals within the 3-year period. By that time it is to be hoped that the international climate will have been so improved that the negotiations of other disarmament measures will have become possible.

The political effects of carrying through these measures to end the terror that has brooded over a decade cannot fail to be beneficial to the whole international community. Of course, the deep reality of the cold war will remain untouched. But the illegitimate issue of sheer physical survival will no longer dominate the continuing rivalry between opposed forms of social and political organizations. Hence it should be possible to see more clearly the real issues—moral, political, and economic—and to deal with them more firmly.

I know that my proposal has raised misgivings in some minds. "We face an enemy," so runs the argument, "who recognizes no moral restraints in his use of force, and who will stop at nothing to gain his ends. Only terror of intolerable reprisals will deter him from aggression. Therefore, we should not surrender the weapons of terror." This argument, if valid at all, would forbid any kind of nuclear disarmament negotiations in good faith. It would condemn the world to go on living under an unstable balance of terror until the unlikely event of a Communist conversion to morality. Hence the argument reduces itself to absurdity. Moreover, it implies an abject admission that human reason is powerless to cope with evil except by stooping to evil. And it would require that we forever commit ourselves, in the name of an undefined morality, to the profound lack of moral control and to the equally profound lack of political rationality that have characterized our armament policies for the past decade. I do not recognize the validity of this kind of twisted and despairful argument. In fact, I do not think that any kind of political or moral or even military argument can be made, with any plausibility, in favor of a balance of terror as a basis of peace. Terror, induced by the threat of unlimited violence, has no place in the moral or political universe. Advocacy of unlimited violence, or consent to it, will make barbarians of us all. Our first duty as a civilized people is to banish the barbarism of terror from the place it has usurped in public policy.

The moral cynicism of communism is a poor excuse for maintaining a policy of terror. I readily grant that no moral scruples hinder communism in the pursuit of its aims. But it does not follow that communism recognizes no restraints at all on its use of force in pursuit of its aims. The supreme restraint is imposed by the very Communist dogma of world revolution which is supposed to usher in a new era of world organization, the dogma supposes that there will be a productive world and masses of peoples to organize. Hence the dogma forbids the use of unlimited nuclear violence that could imperil the sheer existence of peoples and world alike.

There is, moreover, the Communist assurance that its revolutionary advance is as inevitable as history itself. But the revolution is to advance as history advances, gradually and little by little. The capitalist camp is not to be shattered by some sudden overwhelming release of nuclear violence, let loose with no defined political purpose but only with the intention of sheer destruction.

This is not the strategy of the revolution. Rather, the revolutionary assurance is that there will be a continuing series of limited political victories, and an accumulation of limited economic conquests, and above all a growing conversion of the peoples of the world to belief in the truth of the Communist ideology and in the superior merits of the Communist system of social organization.

All these gradual advances will be supported at every turn by apt force, when the use or threat of it is useful or necessary for the limited end in view at the moment. This is the ever-present danger that American political, military, and weapons policy must confront and overcome. The essential problem is to possess the apt force to meet the limited threat of the moment, wherever it may arise.

However, the same Communist dogma and the same Communist assurance of inevitable success that dictate the use of apt force, if force is necessary to insure success, also set limits to the force to be used and forbid the extremes of violence. The Communist purpose is success, the political success of the revolution. Limited force is an apt means to this success. Unlimited nuclear violence is an inept means, a useless means, a far too dangerous means.

Therefore is it true to say that communism "will stop at nothing" in the matter of the use of nuclear arms? It does recognize its own kinds of restraint. Its own dogma is a discipline on the use of force. To overlook this fact is to mistake the real peril we face. Policy designed to meet fanciful dangers is a work of fantasy, not statesmanship.

Finally, in this same connection a serious question must be raised. Is it true to say that the American policy of nuclear terror has been a success? Has the unlimited nuclear deterrent, backed by the threat of massive retaliation, achieved any real purpose, military or political? Has this policy effectively "contained" the Communist revolution? Has it stopped the Communist regimes from moving toward any of their selected goals?

No serious man may answer these questions with an unhesitating and unqualified "Yes." At best, the answer can be only conjectural. And there are serious reasons for thinking that the answer ought to be "No." The main reason is that during the past decade the advance of the Communist revolution has not in fact been halted. Or, where it has suffered a check, the credit must go either to the altered course of events or to policies other than massive retaliation.

The argument made by the advocates of our present strategy of massive retaliation, namely, that only a policy of terror will deter the immoral Communist enemy, and that therefore the surrender of our megaton weapons of terror would entail serious risk to American security, is a purely gratuitous assertion. It cannot be proved. It must be taken on faith, and hence constitutes a poor basis for a rational policy. Much better arguments than this would have to be put forward before the categoric rejection of my proposal would be justified.

The proposal does involve an element of risk, as all disarmament proposals must. But on any calculation of relative risks, especially those involved in current American armament and disarmament policy, I much prefer to accept the risk involved in my proposal. No other nuclear disarmament plan now before the American public involves a risk as minimal.

Appendix

Advertising Builds the Economy

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. JACKSON. Mr. President, many Members of the Senate obtained a rare insight both into the effectiveness of television and the ability of our national economy to grow at a breakfast meeting in Washington, D.C., Thursday, February 4.

As one of those privileged to attend the meeting, arranged by the Television Bureau of Advertising, Inc., whose board of directors is headed by Otto Brandt, of KING-TV, Seattle, I commend both the fine presentation made and the response delivered by my colleague, the senior Senator from Washington [Mr. MAGNUSON].

I ask unanimous consent that Senator MAGNUSON's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF THE HONORABLE WARREN G. MAGNUSON, SENATOR FROM THE STATE OF WASHINGTON

Senator MAGNUSON. Thank you, Pete Cash.

I am convinced also that it's a very young industry. I am convinced also that we are very young ourselves, but the time goes by quickly, and probably as in advertising, as in politics, the time is now.

I am glad for the invitation to be here this morning. I am particularly pleased because my old friend Otto Brandt, who is one of your officers, invited me. He is one of the fine and responsible citizens of our community.

Television advertising, however, faces a sort of arduous task, a searching task; it is young; the whole medium is young, and that is why I suppose in the last few months they have taken the youngster out in the woodshed and given him a little spanking. I don't think that will hurt him; I think probably that will make him grow up to be a better person.

But television, and television advertising as an adjunct, is in the public domain, and therefore the responsibility to the public becomes a real and a real moving thing with all of you engaged in this industry. It is a little different than the normal type of advertising, and if this movie showed anything this morning, it showed that the impact of the great medium of television is the greatest the world has ever known, and therefore the greater the responsibility to you people.

I suppose if I were to suggest anything this morning looking at it from my angle, when you attract, intrigue and intrude, that that responsibility would carry with it that you do so in good taste; that you do so consistent with the responsibility that indirectly you have because this is in the public domain.

There are only so many channels, as you all well know; so much available space in the spectrum. There are only so many hours in the day, and that narrows the impact of what you people do in television advertising. And there again, this would point up the great responsibility.

For instance, that public domain is now being used by just a few channels. For instance, there are other uses that domain might be put to. I think of eduactional TV, which offers a great future to the problem that the U.S. Senate this morning is considering, namely, the school problem.

I suggest that probably that is one of the things that you people in the whole industry, from the licensee, to the advertisers, to the agencies, and those of you associated, consider as part of your public responsibility. Because if you don't accept that responsibility, which I think you have, or at least I think you are becoming more conscious of it—the very fact that you meet here today and break bread, and exchange ideas about it, the future, or the now, of television, surely augurs good for the fact that you do accept the responsibility that you have to the American public.

I am sure you will do that; I am sure you will realize it; I am sure also that you will face up to it, and we who are in Government, who are part also of that public responsibility, those of us in particular who have charge of the committees in the Congress of the United States that deal with this new media of television, also feel that you will measure up to that responsibility.

For instance, when I said Otto Brandt is a responsible citizen of our community, one of your high officers, that is true, and when a man is a responsible citizen I think he assumes his responsibility in that light.

So I do congratulate you on having an organization of this type and putting together this very vivid film. It is not only vivid to the mind and the eye, but it calls our attention to the fast-moving world. You are part of the Nation's economy, and without advertising I don't suppose America would be—despite all the talk you hear—the greatest power in the history of the world, and the greatest power in the world today, and in that role you play a very important part.

We up in the Congress have a deep feeling, I believe, leaving out headlines or specific instances that we have been reading about for the past few weeks, or past few months, have a great feeling that the industry of which you are a part is going to take care of a lot of these so-called evils themselves, because you are responsible citizens, and when I say good taste, I mean that. When you intrude into the American home, you must do it in good taste; you must do it honestly; you must not be carried away by a portion of this film which pointed out that if your competitor does something, you have got to do something, too.

Sometimes because the speed, the haste that is necessary, does move people to do something that may not be in the public responsibility, and may be sometimes in what I like to term bad taste, maybe we should look twice at some of the things we do in advertising, which I hope you will. And in doing that, you are going to help all of us, the public, the Government, and yourselves, to make this the thing that we hope it will be, a great force in not only a free America, but in the economy of these United States.

Thank you very much.

[Applause.]

Survival Is Possible—Hopeless Message of "On the Beach" Overlooks Possibility for Protection Against Fallout

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. STRATTON. Mr. Speaker, several weeks ago my colleague, the junior Senator from New York State [KENNETH B. KEATING], arranged for Members of the House and Senate, as well as for their staffs and families, to witness a special showing of the popular motion picture "On the Beach." This film, starring Ava Gardner and Gregory Peck, purports to represent the end of the world as atomic fallout from a nuclear war already concluded in the northern hemisphere gradually filters down into Australia. This motion picture certainly packs an emotional wallop and puts across, of course, the need for all of us to do everything we can to prevent the outbreak of nuclear war.

Nevertheless, there are a number of elements of unrealism in the film which could, I think, have very disturbing consequences. The casual moviegoer will find it hard to believe, for example, that Mr. Peck would ever leave as attractive a young lady as Miss Gardner alone and unprotected "on the beach" and take his ship and crew out to sea alone for a few more days of survival. But this bit of unrealism is only one small evidence of the basic unrealism of the film as a whole, which revolves chiefly around the point that there is nothing we can do to protect ourselves against atomic radiation or fallout. The people in the film stand quietly by and wait for death to overtake them.

Such a message is, of course, completely contrary to the facts. There are many things indeed which can be done to protect us against radiation, as even Mr. Peck's Ship's actions in the film demonstrate. In fact the impression that we are absolutely helpless in the face of radiation and that there is nothing we can do about it could actually do very great harm to our national defense program.

In that connection action which has been recently taken by the Civilian De-

fense organization in my State of New York in circulating a booklet entitled "Protection From Radioactive Fallout" is most significant and illustrative of some of the positive steps we can take, and should make plans to take, to protect ourselves from the helpless fictional situation which "On the Beach" represents. Indeed, the extent to which we protect ourselves in advance against radioactive fallout may well contribute, in my opinion, in deterring the occurrence of any such incident.

To illustrate the impact of this little booklet, I include herewith an editorial from the Amsterdam Evening Recorder of February 2 describing it:

HANDBOOK FOR SURVIVAL

Over the weekend, local Boy Scouts distributed free handbooks, entitled "Protection From Radioactive Fallout." Material contained in the booklets is based on a report made to Governor Rockefeller concerning the problem of radioactive fallout in the event of a nuclear attack. It spells out the protective steps to be taken for survival of citizens.

The handbook describes the hazards of fallout, how it spreads, and what measures responsible citizens should be prepared to take for the protection of their families. It could be a ticket to life, should an atomic bomb ever be dropped in this area.

Those who received one of these little booklets should peruse it thoroughly. Those who were missed should make it a point to obtain a copy. They are available from members of Scout troops or the Montgomery County civil defense organization.

A little knowledge may at times be a dangerous thing. But in other cases and nuclear warfare is certainly such a case, knowledge, little or great, could mean the difference between life and death.

keeping a watchful eye on the mails. The Democrat & Chronicle further suggests that parents launch their own campaigns to get interesting and wholesome reading into the hands of their children, and to stimulate them to take an interest in this kind of literature. There is certainly great merit in this editorial's comment that "the problem of salacious literature finding its way into young hands does not exist for youngsters who have been intelligently and skillfully motivated in their reading." I hope this idea will gain wide circulation, because it contains great promise.

I certainly commend the Democrat & Chronicle, which has consistently been in the forefront of efforts to wipe out the flood of filth, for its editorial stand, and I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT READING

While police and citizens' committees everywhere are debating how best to protect children from indecent books, the Batavia Youth Bureau comes up with a suggestion so simple many agencies haven't thought of it. That is for parents to do the protecting. Specifically the Batavia Youth Bureau asks that parents watch the mails for offensive reading matter addressed to minors.

Parents can do more. From the moment youngsters begin to recognize words, they should be provided with wholesome reading * * * preferably in books they themselves own. A colleague, besides drastically rationing televiewing time for his youngsters, lets the light stay on in their rooms an additional half hour if its spent reading. Other parents are reviving the art of reading aloud.

The point is that the problem of salacious literature finding its way into young hands does not exist for youngsters who have been intelligently and skillfully motivated in their reading.

A Positive Means for Combating Pornographic Literature

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. KEATING. Mr. President, tremendous interest has been generated all over the country in the great effort to combat the spread of pornographic literature and other materials. Religious and civic groups, government officials at all levels, and just plain interested citizens have joined the fray with particular emphasis on means for preventing the flood of obscene publications into the hands of our young people.

There are a number of legislative proposals in this field, each of which holds some promise for finding solutions to this perplexing problem. I am hopeful Congress will act soon in this area.

A recent editorial in the Rochester (N.Y.) Democrat & Chronicle pointed up a positive means for combating the spread of pornographic literature. The Batavia (N.Y.) Youth Bureau suggests that a good way to stamp out smut is by

World War I Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. HENDERSON. Mr. Speaker, for several years the veterans of World War I have been appealing to Congress for a pension. Members of the several barracks of the organization in the 15th District of Ohio have advised me that they are continuing their efforts to convince Congress of the need for such legislation.

Recently I received a letter from a member of the Muskingum County Barracks 454 in Zanesville setting forth his feelings with regard to the pension legislation. I ask unanimous consent that the letter be printed in the Appendix of today's RECORD.

The letter follows:

VETERANS OF WORLD WAR I
OF THE U.S.A., INC.,
Zanesville, Ohio, January 27, 1960.

DEAR CONGRESMAN HENDERSON: I remember—yes, I remember well—42 years ago in 1917 when President Wilson declared war on Germany; the call to arms when so many enlisted; the selling of war bonds; the speeches; the songs—"Over there, and we won't come back till it's over, over there."

The camps; the ships that carried us over there; the sleeping quarters where baggage was formerly carried; the subs that sank many ships; and the landing on French soil. Yes, we had come for a purpose—a just cause—so that freedom would not perish from this earth.

Yes, I remember the battles in the early part—Belleau Woods, Chateau Thierre, Meuse-Argonne, and many others; how we fought with airplanes (called crates) and the French 75 guns; how we lived and slept in the trenches for $30 a month (many never returned but sleep eternally in Flanders Field); the signing of the armistice on November 11, 1918, in a railroad car in France, so that this war would end all wars; also Armistice Day, 1918, and the singing and rejoicing that the war had ended in victory and glory for us and our allies.

So now all we ask is that the remaining "forgotten soldiers" be given an adequate pension, with no penalties attached because of a little savings or income which he or his wife may have.

Pensionas given to all ex-Presidents and ex-Presidents' wives (also Congressmen and generals) have no penalties attached because of their earnings or their wife's earnings or because of their incomes. We ask only for the same conideration for the soldiers of 1917 which is now given to the Spanish War veterans.

Yes, all of us remember last Armistice Day, November 11, 1959, when taps were blown and the guns facing the east were fired in memory of those who have answered their last rollcall. As one speaker said, "They should be remembered this day and every day for the sacrifices they made so that we might have peace and liberty once more." Permit us to remind you of the World War I veterans who remembered to join the U.S. forces in 1917 and who did not forget to salute our flag in 1959. We now ask that you not forget the veterans of 1917.

We now respectfully ask that you, as a Member of this Congress of the United States, amend pension bill No. 7650 of 1959, or pass bill H.R. 6336 without income penalties attached and that this be done this year.

An early reply to this letter will be greatly appreciated.

Sincerely yours,

MUSKINGUM COUNTY BARRACKS
No. 454,
FRANK J. SHURTZ,
Past Commander.

International Development Association

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. JAVITS. Mr. President, the International Development Association is a fine new instrument for the development of the high capabilities of full association among free nations and freemen for high

policy. It has the potential of expanding aid to the industrially newly developing nations such as India which is so vital to the free world which faces crisis times on a large scale within a few years unless considerably more aid is forthcoming to enable its development plan to succeed. As the soft currency subsidiary of the World Bank, IDA needs the prompt approval of its charter if it is to do the work for which it was created. It will support a lending program of $160 million annually to newly developing nations, which is really not more than a beginning but which provides a base for development and broader application. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Beginning," published in the Washington Post and Times Herald of February 2, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BEGINNING

Member nations of the World Bank ought to lose no time in approving the charter of the Bank's new soft loan subsidiary, the International Development Association. The initial capitalization of $1 billion, with about four-fifths of it in hard currencies, will support a lending program of only some $160 million a year to underdeveloped nations. Obviously this will need to be expanded before IDA can take on a truly significant share of the economic development task.

India alone, for example, will require several times as much assistance annually if it is to break the tightening grip of poverty. Thus the industrial countries cannot view their IDA subscriptions as alternatives to continuing national programs, at least until the IDA's sights are materially lifted. Nor should there be any illusion that the subscription of soft currencies by countries which have acquired large amounts will significantly lessen the need for hard capital in the early stages.

With the experience and integrity of the World Bank behind it, IDA ought in time to attract a growing proportion of the industrial nations' foreign economic assistance funds. Through such a multilateral approach, the broadest possible participation would be assured, while the political and other inhibitions that often attach to strictly bilateral aid programs could be avoided. Ultimately, this new window at the Bank could become the focal point for a mighty, free-world effort to bridge the gap between the "haves" and the "have-nots," to which the latter could in time make their own growing contribution.

The Need for Depressed Area Legislation

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. SAYLOR. Mr. Speaker, as Congress gets down to the business of acting upon the many important issues that must be acted upon in the coming months, it is important that every Member be apprised of two important facts relating to a highly urgent matter:

First. Despite the rising level of general industrial and business activity, there remain surplus labor areas in which thousands of American families are deprived of an opportunity to obtain adequate food, clothing, and shelter; and

Second. President Eisenhower has reiterated his desire for legislation to assist areas of urgent need.

The White House position in this regard should be noted carefully by the Congress. The President has appealed for a law specifically designed to provide assistance to regions of chronic unemployment, but he cannot in conscience subscribe to the catchall bills that have been proposed from time to time for the purpose of attaching to a reasonable and proper measure an assortment of pork barrel projects that have no relevance to distressed areas. Nor can any of us whose immediate concern is for those unemployed citizens who have been looking in vain for Congress to take the lead in stimulating the economy of their neglected communities.

Surplus labor legislation should and must be kept free of political implication, for the savage consequence of prolonged unemployment have no regard for party affiliation. A number of the depressed regions are represented by our colleagues on the other side of the aisle, and I have been working with many of my friends over there for many months on this problem. Those of us who have walked through stricken communities cannot help but resent their situation in a period when most of America is enjoying a high degree of prosperity. Our only recourse is to appeal to Representatives of districts which have fortunately escaped the horror of chronic idleness persisting in our constituencies for many years.

I do not belittle efforts that the Federal Government has put forth in its program to wipe out pockets of unemployment. In many States there is ample evidence of success in the small business programs, financial assistance for urban renewal, public facilities, State and local industrial development corporations, and the procurement of goods and services and construction of Government facilities.

Yet even these projects have their limitations, with some areas almost wholly outside the perimeter of benefits extended. A sound distressed area bill is therefore vital to reinvigorate the economy of those communities which, through no fault of their own, have not been able to take advantage of other Federal programs.

Mr. Speaker, I introduced a distressed area bill soon after the 85th Congress convened in 1958. Similar bills have been proposed by other Republicans and Democrats alike. Which of these measures is enacted is of no significance. I assure you that I shall give my enthusiastic support to whichever one comes up for a vote. I ask only that the House reject any attempts to tack on a myriad of other items that have no relationship to the serious problem which is facing us at this time, and work towards a bill that will become a reality.

The Right To Vote for the District of Columbia

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. BEALL. Mr. President, on February 2 the Senate passed Senate Joint Resolution 39 which, among other things, gives Washington, D.C., residents the right to vote. This, together with the home rule legislation which the Senate passed last year, culminates what has been an arduous, but gratifying, effort in giving the residents of the District of Columbia the full measure of self-government which they so rightly deserve.

I was pleased to join the Senator from South Dakota [Mr. CASE] and the Senator from New York [Mr. KEATING], in proposing the amendment to Senate Joint Resolution 39, and I share their hopes that our efforts will be duplicated by early action in the House.

The Washington Evening Star of February 3 and the Washington Post and Times Herald of February 4 carried editorials commenting on the success of the Keating amendment and expressing similar hopes that the House will act quickly in approving this legislation. I ask unanimous consent that these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Feb. 3, 1960]

THREE CHEERS

The heavy Senate majority, comfortably exceeding the required two-thirds, which approved the Constitutional amendment yesterday granting Washington residents the right to vote for President, Vice President, and representation in Congress, is something to cheer about.

Some 65 proposals of the same sort have been introduced in Congress in the past 83 years. A few have received adverse reports from committees and about as many have been favorably reported. But yesterday's Senate vote on the Keating resolution, previously sponsored also by Senator CASE of South Dakota, and BEALL, of Maryland, was the first time the matter has ever received a test on the floor in either House of Congress.

We are confident that if it can be brought to the floor of the House it will be as decisively approved. For it is unthinkable that the extraordinary contradiction, here at the heart of the Republic, of everything we preach to ourselves and the rest of the world regarding the right to vote can much longer to condoned. We would have wished that the Keating resolution could have been considered alone and on its own merits, rather than as part of a package containing two other Constitutional amendments, one of them of more political than actual importance. But the Senate vote yesterday was of great significance in registering the support of the District's cause by so many Senators.

It is a matter of interest that the House Judiciary Committee, which now receive the

Senate resolution, is headed by a chairman who long since demonstrated his own support of its objectives. When the late Hatton Sumners, of Texas was chairman of the House Judiciary Committee, the present chairman, Representative CELLER, of New York, conducted hearings on a somewhat similar resolution which brought a favorable report from the committee. Many Members of the House, unable to stomach home rule, have indicated their support of granting to residents of Washington their basic rights as citizens to be represented in their National Government. These are the rights secured by the Senate-approved amendment.

We hope Chairman CELLER will arrange prompt hearings, and that the amendment will be sent to the 50 States in this election year of 1960.

SALUTE TO THE SENATE

The Senate's feat of Tuesday is nothing less than a constitutional handspring. Two of the constitutional amendments it approved with dramatic speed have been kicking around the corridors of the Capitol for decades. Apparently the sponsors were able to catch the Senate in an amending mood. In any event, the coup is a remarkable one, and it greatly encourages hope that three grave defects in the Constitution can now be remedied.

Ordinarily it is risky to tie several amendments together, as this gives the opposition to each a chance to combine and kill them all. Fortunately, this did not happen in the Senate. If the House will now accept the entire package, each amendment can be considered separately on its merits by the States, under terms of the resolution. At least that will prevent one amendment from dragging on the others in the ratification process.

This newspaper has previously given hearty support to the objectives behind all of these amendments. The poll tax is a discredited device used largely to disfranchise poor Negroes in five Southern States. We applaud the Senate vote to wipe it out. Senator KEFAUVER'S amendment to authorize Governors to fill vacancies in the House in case of a national disaster is also a laudable precaution in these days of nuclear rockets. The Keating amendment to permit District residents to vote in presidential elections is a simple act of justice that should have been approved a century and a half ago.

Some fear is being expressed that this proposed grant of national suffrage to residents of the District may impede action on the District home rule bill in the House. Actually these measures are unrelated, except in one particular. The home rule bill, which requires approval by only a majority of the House, would create a local government here, with an elected legislature. Its chief purpose is to give District residents a voice in their local government and to relieve Congress of the burden of serving as a city council.

The Keating amendment, which must have approval by two-thirds of the House and by the legislatures of three-fourths of the States, would enable District residents to vote for presidential electors as if the District were a State and for delegates to the House equal to the number of Representatives that the District would have if it were a State. The proposed delegates could be transformed into voting Representatives by act of Congress. We should much prefer an amendment that would make these proposed legislators full-fledged Representatives from the outset. But the amendment as it stands would be a great step forward.

The only overlap between the home rule bill and the Keating amendment comes at this point. The home rule bill calls for a nonvoting District delegate in the House. It is said, however, that this provision may be stricken as a compromise to get action on the bill. That would be a logical step if there is a chance of getting House action on the three-amendment package.

The most pressing step is completion of the roster of 219 names on the petition to dislodge the home rule bill from the House District Committee. No vision of presidential suffrage should be permitted to interfere with this drive. If the right to vote for presidential candidates and for potential Congressmen can be happily added to home rule, the District will indeed be grateful.

Today's Farm Problem

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. SHORT. Mr. Speaker, the magazine U.S. News & World Report, in its issue dated February 8, 1960, has published an unusual but factual appraisal of today's farm problem. As a member of the House Committee on Agriculture, and a lifelong operating farmer, I can testify to the many frustrations with which the modern farmer is faced, in staying in step with new developments and financing new equipment and facilities. Some legislation that was passed to help the farmer has, over the years, been of questionable benefit to the small wheat farmer, particularly. I must say, I have not given up hope for legislative relief in 1960, but the outlook is not bright. The complexion of the Congress is the same as last year, but it would be my desire to lay aside political differences on this important matter.

The disagreements among the major farm organizations over a basic approach, I believe, have been tempered to a small degree. Among our farm population itself, I believe, there is recognition that a further buildup of surpluses must be stopped. Under the circumstances so clearly set out in this article, it is difficult to see how the farmer could cut his production and stay in business without an increase in price.

Mr. Speaker, the magazine article I ask to include here contains some basic truths about the situation in farming today, and I commend it to the House of Representatives:

WHERE MODERN EFFICIENCY DOESN'T PAY OFF

Farmers once again are caught in a squeeze between rising costs and declining income. The squeeze is expected to grow tighter as pay raises for city workers, sparked by the raise in steel, are passed on to farmers in the form of higher prices on the things they buy.

What the farmer sees when he looks at the facts is shown by the accompanying chart. He sees, for one thing, that efficiency hasn't paid off for him.

The American farmer, on the average, has increased his efficiency by 65 percent in the past 10 years. He has done this by investing his own money, or borrowed money, in new machinery and improved methods. This improved efficiency has been accompanied by a drop of 7 percent in farm prices.

By contrast, the city worker in office and factory has had raises far greater than his increase in efficiency. While efficiency in offices and factories has gone up by 21 percent in the past 10 years, pay has risen by 58 percent. The increase in efficiency by city workers was due largely to investment by employers in new equipment and methods.

BARGAIN FOOD? NO

Consumers, however, have not enjoyed lower food prices as a result of declining farm prices.

The food from U.S. farms that goes into the market basket of the average housewife now returns the farmer 12 percent less than it did 10 years ago. The housewife, however, has to pay 9 percent more than she paid 10 years ago. Increases in "middleman's" costs have more than offset the farmer's loss.

Farmers, as a result, get a smaller percentage of the consumer's food dollar than at any time since 1939.

Another comparison watched by the farmer is the "parity ratio," official measure of his buying power. It has dropped nearly 20 percent since 1950, to the lowest point since 1940. In simple terms, this means that a bushel of corn, a bale of cotton, a slaughter hog will buy less than 10 years ago.

All this has put the farmer on a treadmill. He has increased efficiency, enlarged his farm, sold more products. But his income for a year's work remained virtually the same in 1959 as in 1950—about $2,500 for the average U.S. farm. Those dollars, today, are worth 18 percent less than in 1950.

That is today's farm problem as seen by farmers.

Higher output means gains for everybody but the farmer

SINCE 1950	Percent
Workers' output, in factories and offices, per man-hour	up 21
Workers' wages per hour	up 58
Farmers' output, per man-hour	up 65
Farmers' income, from products they grow	down 1

Result: Farmers ended the 1950's, a "decade of progress," with income dropping, despite increased efficiency.

Food prices rise but farmers get less of the money

SINCE 1950	Percent
Housewife's cost, for a market basket of food	up 9
"Middlemen's" charges, for processing and selling the food	up 28
Farmer's prices, for the food in the basket	down 12

Result: Farmers get 38 percent of the housewife's food dollar, their smallest share since 1939.

Farm buying power lowest in 20 years

Parity ration, the official measure of purchasing power of farm products:

	Percent of the 1910–14 level
10 years ago	96
Now	77

Result: Buying power of farmers' products is at the lowest level since August, 1940.

Basic data: U.S. Department of Agriculture; U.S. Department of Labor.

The Meaning of Yeshiva University

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, February 4, 1960

Mr. KEATING. Mr. President, from its modest beginning in 1928, when 750

students formed its first class, Yeshiva University, in New York City, has grown to become one of the outstanding centers of learning in the United States. Today, Yeshiva University has a student enrollment of 5,000, and its dynamic building program envisages, in the years ahead, a new Yeshiva with its own campus and with facilities for 10,000 students.

Recently, at the annual scholarship dinner of Yeshiva University, held in New York City, Charles H. Silver, president of the board of education of the city of New York, and one of the great moving spirits behind the success of Yeshiva, delivered an address on the subject of the creation of this university and of its meaning in the modern world as a symbol of spiritual triumph. In view of the inspirational character of the address, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY CHARLES H. SILVER AT THE YESHIVA UNIVERSITY SCHOLARSHIP DINNER, WALDORF-ASTORIA HOTEL, DECEMBER 13, 1959

In the procession of civilization no period can claim a monopoly on the defense of human rights. Nor may any one people boast of being the sole champions of education.

Every age has had its own struggle to keep burning the lamp of liberty and learning. Every race and creed has, at some moment in time, brought forth a leader to advance the cause of understanding and knowledge.

But it has been the particular obligation and privilege of the Jew to bestow upon the world the eternal blessing of our Holy Scriptures—the law and commandments. These have been a beacon of hope and divine guidance to all the generations of man.

And it has been the Jew on every page of history, in almost any corner of the world, hounded, beaten, and at bay, who has turned on his tormentors to cry out for justice and to strike at least one telling blow for humanity.

As we approach the feast of lights in tribute to the dauntless courage of the Maccabees, we take pride in the survival of their fierce determination to protect the ancient heritage and immortal teachings of our tradition. We see their flaming deeds kindled again in a brave new nation. We see them growing to greater strength on our own shores, in the modern miracle of our great university.

For what is Yeshiva but our people's hopes and dreams, preserved in a notable center of culture, as surely as they have been in our noble Commonwealth of Israel.

One is the embodiment of our legacy of learning. The other is the living symbol of our love of freedom.

I know of nothing more glorious in the long, tortured road we have traveled through space and time, than the creation and development of that citadel of learning whose anniversary we celebrate tonight.

The very fact of Yeshiva University with its 17 schools and divisions must bring a surge of pride to every Jewish soul. It surely must fill your hearts with satisfaction, as it does mine, that we have been given the opportunity to share in establishing and sustaining this vast contribution to human knowledge.

Yeshiva is a wonder of our age, and of the ages, for here we find an impossible dream come true in a type of pioneering which combines the most advanced scientific methods of our missile age with the imperishable wisdom of the Torah.

We have tapped the deep wellsprings of the past to serve the needs of the future.

In the last few years, Yeshiva University has established four graduate schools, offering instruction in the vital fields of mathematics and physics, teaching, social service, and medicine. From the limited facilities which offered meager accommodation to 750 students in 1928, we have grown to a student body of 5,000, with a faculty second to none. The years ahead will see a new Yeshiva University rise on its own campus with classrooms and dormitories for 10,000 students, on an ideal site, four blocks square on Broadway, in the eighties. This will be the dynamic center of the Yeshiva University of tomorrow which you are building with your hands and hearts—and never-failing help—today.

Our graduate school of education has become, in a few short years, the third largest in the entire metropolitan area, richly deserving of a building of its own and recipient of a Ford Foundation grant of half a million dollars. The Stern College for Women has earned such eminence that it can accept only one out of every nine young women who seek to enter. Our Albert Einstein College of Medicine, a $140 million city of health, is the only medical school under Jewish sponsorship in America, and is already recognized as one of the finest in the world.

Meanwhile, across the seas, Israel waits watchfully as the Middle East rumbles with threats of renewed violence. And it must grieve many of you who know the suffering and anguish of the refugee and the wanderer, who look to the Holy Land as a haven, to hear one of our own leaders question the principle of aid to Israel from the Jews of America. What a tragedy it is that this infant land, with more borders than territory, and not a day of peace, facing foes on every hand, should now be threatened by one among her friends.

Behind the Iron Curtain, despite the smiling assurances of our recent visitor, the Jew is little better than a tolerated intruder, deprived of status and even of hope for a better day. In North Africa, he faces a harrowing wall of hostility. In Germany, he sees the smouldering ashes of anti-Semitism licking up into sickening new tongues of hate.

Even here, in our own God-loved land, bombed synagogues and fanatical pamphlets remind us that the fear-makers have not abandoned their evil trade.

Against this background of darkness and distrust, the lights of the Menorah remind us of a handful of Jews, 20 centuries ago, who triumphed over adversity and seemingly certain defeat. And the soaring towers of Yeshiva tell the world that our rich traditions and love of learning will survive the threat of prejudice and the ravages of circumstances to serve mankind, through all eternity.

Our feet have remained firmly fixed in the shifting sands of time. Our eyes are set on a star—and however painful the climb, however long or far the winding path ahead—we shall remain faithful to our destiny:

To bear the word of God.

To build the world of man.

To sustain Israel as one more beacon light of justice and liberty.

And to support Yeshiva for all men of all lands, of all races and creeds, asking only that they love knowledge—and truth.

Reapportionment of Congressional Districts

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of a report to me from the Library of Congress, Washington, D.C., dated January 5, 1960, generally concerning the subject of reapportionment of congressional districts in connection with the oncoming anticipated U.S. census report. I know it will be of nationwide information and interest.

THE LIBRARY OF CONGRESS,
Washington, D.C., January 5, 1960.

The Honorable CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR MR. DOYLE: In response to your request of November 13, 1959, asking several questions about congressional districts and the population of certain of the States, the legislative reference service submits the following information and materials for your consideration.

In answer to question 1—Which 25 Congressional districts in the United States contain the largest population, according to latest information?

In attempting to answer this question, an examination was made of figures found in the Census Bureau's files. These figures consist of estimates made up from local sources by different methods and at different dates, the latest of which is July 1958. These estimates therefore are in no way official in nature. The result of our search was the compilation of a list of 23 congressional districts—rather than 25—on which population information of the nature described immediately above is presently available. The 23 districts are listed numerically by district and alphabetically by State below in the answer to question 3.

The latest available official and complete population statistics for congressional districts are those compiled as a result of the census of 1950. We are inclosing a copy of a study done by the legislative reference service entitled "Congressional Districts, 83d Congress, Ranked by Population as of April 1, 1950 (17th Census)" hoping that this will also prove useful in answering this first question.

In answer to question 2—Which States are losing population; and how much is California gaining in population?

The States of the Union which are losing population are three in number, namely, Arkansas, Vermont, and West Virginia. There are, however, at least 13 States in the Union which will lose seats in the House of Representatives after the 1960 census has been taken. These are the following:

	Seats lost
Alabama	1
Arkansas	2
Georgia	1
Iowa	1
Kansas	1
Maine	1
Massachusetts	2

	Seats lost
Minnesota	1
Mississippi	1
New York	3
North Carolina	1
Pennsylvania	3
West Virginia	1

California is one of a number of States which continue to show a very substantial gain in population. As a result of the census of 1950, the State had a population of 10,586,223 people. The provisional estimate for July 1, 1959, was 14,639,000. Thus, there has been an approximate increase of 4,053,000 persons since the 1950 census was taken, or in terms of percentages an increase of 38.3 percent.

We are enclosing copies of two Bureau of the Census publications which should prove helpful in fully answering this second question. One of these is entitled "Projected Reapportionment of Number of Congressmen by States." The second, which became available only last December 27, is "Provisional Estimates of the Population of States and Selected Outlying Areas of the United States."

In answer to question 3—How many congressional districts in the United States have a population of more than 600,000? Where are they?

The list of districts which follows cannot be said to be definitive. As indicated above, the estimates of population are made up from local sources, by different methods, and at different dates, the latest being July 1958. Congressional districts possessing 600,000 or more population are the following:

District	Year	Population
9th Alabama	1957	607,758
10th California	1958	661,500
17th California	1956	632,269
25th California	1956	609,060
28th California	1956	619,762
30th California	1956	666,598
1st Florida	1958	696,000
4th Florida	1958	893,100
5th Florida	1958	644,600
6th Florida	1958	627,300
5th Georgia	1957	739,196
11th Indiana	1957	652,000
5th Maryland	1958	687,830
6th Michigan	1957	613,400
7th Michigan	1957	613,830
18th Michigan	1957	637,260
1st New Jersey	1956	645,000

Sincerely yours,

HUGH L. ELSBREE,
Director.

CONGRESSIONAL DISTRICTS, 83RD CONGRESS, RANKED BY POPULATION AS OF APRIL 1, 1950 (17TH CENSUS)

Final population figures from the 1950 census for the 424 congressional districts in the United States were reported on October 16, 1952 by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Although the House of Representatives has 435 Members, 11 are currently elected at large and do not represent specific congressional districts

The 424 congressional districts ranged in population from the Second District of South Dakota, which had 159,099 inhabitants on April 1, 1950, to the Eighth District of Texas, which had 806,701 inhabitants. Three out of every five of the congressional districts, however, had between 300,000 and 400,000 inhabitants, and 19 out of every 20 fell in the range from 200,000 to 500,000 inhabitants.

The Representatives of six States—Delaware, Nevada, New Mexico, North Dakota, Vermont, and Wyoming—are elected at large. Of these six States, New Mexico and North Dakota have two Representatives each, and the remaining four States have one Representative each. Connecticut, Texas, and Washington, although they have districts, each elect one additional Representative at Large.

Congressional district boundaries were redrawn in 16 States following the apportionment based upon the 1950 census. These 16 included 14 of the 16 States which had either gained or lost Representatives as a result of the apportionment. Two additional States which had no change in the number of Representatives—Ohio and West Virginia—revised the boundaries of their congressional districts. In the remaining 32 States, the boundaries of the congressional districts were not changed. In Texas and Washington, each of which gained a Representative, the additional Representative is elected at large.

At-large congressional districts—11 House seats

State	Number of at-large seats	Population
Texas	1	7,711,194
Washington	1	2,378,963
Connecticut	1	2,007,280
New Mexico	2	681,187
North Dakota	2	619,636
Vermont	1	377,747
Delaware	1	318,085
Wyoming	1	290,529
Nevada	1	160,083

Regular congressional districts—424 House seats

The Emergence of Communist China

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. WILEY. Mr. President, the emergence of Red China as a powerful nation, dominated by an aggressive Communist regime, requires, I believe, effective long-range planning aimed at determining how to cope best with this evergrowing threat to the security of the free world.

Today, Red China is No. 1 in world population with about 650 million people. In land area, it ranks third with a total of 3,750,000 square miles.

The Chinese Communist regime is undertaking a dynamic industrial, agricultural-military development program.

Recently, a special study prepared by the Library of Congress published, at my request, under the auspices of the Senate Foreign Relations Committee, reveals that, although there are serious difficulties within Red China, the Commu-

nist regime retains an iron grip on the reins of that country. Despite real problems, however, the country is moving forward at all possible speed.

Contrary to our own precepts of justice, this progress—to a large degree—unfortunately neglects the interests of the individual—all such rights and interests being made subservient to the will of the Communist state.

However, the major threat is for the years ahead, rather than as an immediate threat to our security—or competition to U.S. progress economically.

Currently, for example, the national output of Red China is only about $55 billion—or about one-ninth that of the United States.

In the light of the growing and expanding power of communism, however, we—as a world leader—and our allies must undertake long-range programs designed to preserve our security and freedom for the future.

Fortunately for us, the balance of power will not depend upon manpower alone. If it did, there is a real possibility that we would eventually be engulfed.

However, the weapons of the future will be created out of the ingenious technological and scientific capabilities of man—a field in which the United States and other free countries have splendid records.

In the face of the long-range challenge, however, I believe there are some fundamental principles which must serve as guidelines to development of policies for the future. These include:

For the present, prevent any further territorial expansion of communism.

Effectively combat the ideological campaigns of communism.

Assure economic superiority of our own over the Communist system.

Strengthen the regional coalitions of non-Communist nations in a self-preservation-type program.

Attempt to establish world law—and the machinery to enforce such law with justice; so as to eliminate the possibility of nations and people being subjected against their will to alien ideas and power.

Recently, a special research project was conducted by Prof. Daniel Lerner and Morton Gorden of the Massachusetts Institute of Technology Center for International Studies. Among other things, the study revealed that, in the minds of a great many people throughout the free world, Communist China may become the most powerful nation on earth by the year 2000. Reflective of a situation that demands our serious consideration in policy planning, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL CHINA BE TOP DOG?

(By Peter Edson)

The thought that Communist China may be the most powerful nation on earth by the year A.D. 2000 has emerged from a special research project conducted by Profs. Daniel Lerner and Morton Gorden of Massachusetts Institute of Technology's Center for International Studies.

This completely unexpected opinion on the rise of Red China over the next 40 years came from over 2,000 out of 4,000 British, French, and German Government and civilian leaders interviewed over the last 5 years. Most of the 2,000 were in France and Germany—only a few in Britain.

The interviews were not conducted like one-shot public opinion polls. They were what research men call interviews in depth. They ran over an hour. They covered some 200 questions, 50 on key issues.

Early interviews conducted by nationals of each country in 1954–58 were rechecked in 1959 to determine any changes in thought trends. Results of the complete survey will be published in book form later this year. It is expected to prove useful in foreign-policy guidance.

It will contain none of the usual predictions of weekends on the moon, pushbutton living, exploding populations, and you'll have to eat algae and like them.

Here are serious efforts to see what the international political situation will be. But anyone interested in the kind of world his children will be living in four decades hence will find food for thought in such research.

About two-thirds of the Western European leaders interviewed do not look for a third world war in this century. They do foresee continuation of the cold war. No chance is seen for full disarmament. Continued heavy expenses for national defense are therefore seen necessary.

As of today, the United States is ranked the most powerful nation on earth. Soviet Russia is second and Communist China third. The rise of Red China to surpass Russia in less than two generations would be an achievement equal to the Soviet's rise from 1917 to 1960. Curiously, no one ranked India as a future world leader or rival to Red China.

Only 7 percent of the Western European leaders interviewed for Messrs. Lerner and Gorden think the world balance of power will remain in the West at the end of the century.

But at the end of the 5-year study period a growing confidence in European unification was apparent. A few leaders now venture the opinion that a politically and economically unified Western Europe could become a leading world power. This may be one of the important new international facts of life developing in this century.

A number of other research projects in this field of international relations are revealing many interesting findings on which foreign policy can be based.

Lloyd A. Free, president of the International Institute for Social Research, Princeton, N.J., last year published the results of his interviews with 100 parliamentary leaders in each of "Six Countries and a Neutral"—Britain, France, Germany, Italy, Japan, the United States, and India.

Mr. Free found American Congressmen pessimistic on the possibility of closer relations with Russia. Only 2 percent here thought it held promise, against 14 percent in Britain, 24 percent in France, 26 percent in Germany.

Oregon Honored—Again

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mrs. GREEN of Oregon. Mr. Speaker, the University of Oregon is about to lose the services of a great president, Dr. O. Meredith Wilson, who is accepting a new position as president of the University of Minnesota. Dr. Wilson's contributions to the University of Oregon, and to all of Oregon's educational system, cannot possibly be overestimated. He has been a real source of pride to the students and faculty of the university and to the people of the entire State. But under the present State administration which, like the national administration after which it professes to pattern itself, values a balanced budget as the highest of all goals, we cannot afford to pay for the services of this great educator.

Oregon's Governor, Mark Hatfield, has greeted the news of Dr. Wilson's move to Minnesota with the astonishing statement that "it is an honor to Oregon that Minnesota should come here for a university president." So it is, of course. Minnesota stands at the top of the list of the States in expenditures for educational purposes, and its leadership has traditionally been willing to pay for what that educational system needs. But the honor which has been paid to Oregon is a little bit offset, I think, by the disgrace which is Oregon's at being unwilling to offer enough to retain the services of this fine college president.

Dr. Wilson's departure for Minnesota is not the only loss the State of Oregon has suffered in recent months. Dr. Harold M. Erickson, State health officer, has also resigned his post to go to California. Dr. Erickson plainly pointed out that his departure was occasioned by the State's unwillingness to take the problems of public health in the modern age seriously. Again by Governor Hatfield's criteria, Dr. Erickson's departure for California is an honor paid to Oregon.

I hope I will not be accused of a lack of appreciation when I suggest that Oregon can ill afford many more such honors. I think most of the people of Oregon who are interested in topflight education and topflight public health services, would just as soon pay, instead of having the honor of the thing.

I ask unanimous consent that a recent editorial on this subject, appearing in the Coos Bay (Oreg.) World, be printed in the Appendix of the RECORD.

OREGON HONORED—AGAIN

Governor Mark Hatfield said yesterday he felt Oregon was honored to have the University of Minnesota hire Dr. O. Meredith Wilson, president of the University of Oregon, as president of the midwestern school.

That's one way of looking at it.

We realize that the $27,000 offered Dr. Wilson by Minnesota can't be matched by the university at Eugene, and we are happy for Dr. Wilson that he can step up to a better job—almost the very essence or realization of ambition in America.

But he follows Dr. Harold M. Erickson, former State health officer, from the State too closely to promote a feeling of comfort.

Dr. Wilson is leaving the State, he says, with regrets. Dr. Erickson didn't express too many, despite his many years of service. It was apparent he felt frustrated in his inability to promote good health conditions under current conditions.

We hope Dr. Wilson is not covering a similiar situation with bland words.

Despite the honor of losing Dr. Wilson to Minnesota and Dr. Erickson to California where he was willing to become assistant in order to find a more favorable climate for performance, we are concerned over this migration of top men to other States.

Oregon needs every able and talented man and woman it can get if the State is to progress to the position the State's resources portend.

But, as someone remarked, we still have Len Casanova, head coach at the university, who turned down a chance to go to the University of California.

A good football coach is far more valuable than a university president or a health officer, someone said during a discussion of Wilson's departure.

And that must be so, because in many places the coach is paid more than the school president.

And money is the American standard of worth.

So we get what we pay for, not what we need most, perhaps, but what we want most.—Coos Bay World.

Newspaper Editors Evaluate Article in Saturday Evening Post Concerning West Virginia

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. RANDOLPH. Mr. President, on Monday of this week I made comment in this chamber concerning a Saturday Evening Post article on the problems and possibilities of West Virginia and its citizens. Reaction to the Post writer's observations and conclusions has been voiced by several newspaper editors and through published statements by public officials. Two editorials, one from the Fairmont (W. Va.) Times and the other from the Charleston (W. Va.) Daily Mail, both published on February 2, 1960, are well written and couched in restrained, yet realistic, phraselogy. I ask unanimous consent that these editorials be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fairmont (W. Va.) Times, Feb. 2, 1960]

NOT OUT OF BUSINESS YET

A national magazine article, "The Strange Case of West Virginia," is attracting wide attention in the Mountain State. It is not a pretty picture that Ruol Tunley, the author, has painted but most of his facts apparently are correct.

Any competent reporter could have done the same type of piece on any State or large city in the country if he set out to find their worst features. Without leaving the main offices of the Saturday Evening Post in Philadelphia, he could have pointed to the vast improvements being made in the downtown section of the historic city while slums continue to flourish on its outskirts.

He could have visited some of the lavish resorts in the Pocono Mountains of Pennsylvania and compared them to the misery in the long-suffering anthracite fields only a short distance away precisely as he contrasted the luxury of the Greenbrier Hotel at White Sulphur Springs with abandoned mining camps in nearby southern West Virginia coal regions.

For that matter, the very approaches to the magnificent vistas of the Nation's Capital are such that there is some embarrassment on the part of those who greet distinguished visitors arriving at Andrews Air Force Base and have to enter Washington from the south. Only a few blocks away from the Capitol itself are shacks and tenements scarcely fit for human occupation.

That these conditions exist in West Virginia, almost side by side with prosperous—even booming—communities has long been known. For 30 years, at least, the problem of what to do about them has been of concern at local, State, and National levels.

One point that the magazine writer may not have made entirely clear when he spoke of the inroads made by the mechanization of the coal industry on the total number of employed was that some of the mining camps he singled out as ghost towns didn't get that way because of automation. Many resulted from worked-out acreage, and the camps would have been abandoned by the operating companies if a machine had never been used to extract the coal.

Doubtless the article will be used as a peg for political machinations in Charleston and pontificating by pundits throughout the State. Governor Underwood can point to his "rendezvous with hunger" public works program as being the sole and only path to the alleviation of the conditions mentioned in the nationally circulated piece. The Democrats can claim they have a better way of doing it without making the program a Republican boondoggle.

Had West Virginia's plight been so desperate as the magazine writer suggested, it is doubtful whether a single one of the major industries which have come to the State in recent years would have located within its boundaries. We may assume that plant locators will not rely wholly on the Tunley report in making future decisions and from that take hope that West Virginia itself will not become a ghost State.

West Virginia has survived what many constitutional authorities claim to this day was an illegitimate birth; it has withstood the rape of its minerals and its timber by outsiders, and it has borne up under almost total indifference to its well-being on the part of successive Federal administrations, Democratic as well as Republican.

There is no reason to believe that a single magazine article, rasping to West Virginia sensibilities as it is, will prove to be the back-breaking blow that will put the State out of business once and for all.

[From the Charleston Daily Mail, Feb. 2, 1960]

IT HURTS, BUT THE POST'S FULL PORTRAIT OF WEST VIRGINIA IS LARGELY THE TRUTH

The Saturday Evening Post's long-awaited look at West Virgina is out, lavishly illustrated, in the issue for February 6.

West Virginians who read it will wince, bridle and fume. It is not a pleasant picture. If they can cool down long enough to read it again, they cannot escape the truth: What the Post says of West Virginia and West Virginians is not only the way we look to an outsider well equipped for color photography; it is very nearly the way we are.

The author traveled everywhere. He saw Charleston and the Greenbrier. He also saw Stotesbury and the random chain of "ghost towns" which link them. He inquired as he moved, and there is not much that he missed.

The detail he picked up along the way is comprehensive and judiciously balanced. The diagnosis is almost indulgently fair. The author (Roul Tunley) has gone to exhaustive lengths to avoid the criticism that he did not stay long enough or talk with the right people. In summary he points his finger squarely at the bewildering paradox: How could a people sitting upon one of the world's great concentrations of natural wealth live so long in wretched and almost hereditary poverty?

For all this the Post's look at West Virginia is also fairly superficial in several important respects.

Mr. Tunley does not note that in the era of the "great handout" West Virginia has been "handed" nothing. In defense industries, in the whole range of national and foreign economic policy (TVA, the sugar subsidy, price supports) West Virignia's interests have been steadfastly ignored.

Mr. Tunley touches upon the price the State has paid or its absentee ownership, a sore point with many West Virginians. He does not acknowledge the coequal truth that it is also absentee ownership which is responsible for the development of its progressive and prosperous chemical, aluminum and steel industries.

Neither does he assess the heavy price West Virginia has paid for its two great wars—the Civil War which gave it birth and still splits its social structure, the mine wars which marked its industrialization and still infect every effort to arrive at some common cause. Sometimes the State seems destined to illustrate everything Marx wrote about the conflict of the classes.

Most disappointingly, perhaps, Mr. Tunley does not touch upon what may be the most serious possibility of all—the possibility that the State's misery is in the evolutionary sense inbreeding and self-perpetuating. That is to say that as the State becomes less and less attractive, the more alert and progressive of its citizens will go elsewhere, leaving the State's problems to those who are less and less capable of solving them. There is some suspicion of this already. Any confirmation of it could become the worst problem of all.

But this is not to find fault with what the author has done. He was not trying to write a social and economic history of the State. He was commissioned, rather, to paint a picture, and this he has done in broad, sure strokes. There are a few factual erorrs: West Virginia's illiteracy is not so great as he says it is, and he accepts uncritically the figures on illegitimacy. But in the main it is an honest and even generous effort to see West Virginia in the round—beautiful, but depressed, free (mountaineers always are), but backward, deserving, but unenterprising and leaderless.

The 54th legislature ought to pause long enough in its labor to listen while the whole thing is read aloud from the rostrum.

The Spirit of Gettysburg

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. FLOOD. Mr. Speaker, Nicholas Meligakes, proprietor of the Plaza Restaurant, located on the town square in Gettysburg, Pa., and owner of the Book Mart, a book and gift shop, situated in the same town, is the author of "The Spirit of Gettysburg," a book which is of

great interest to persons concerned with that portion of our Nation's history.

Mr. Meligakes, a young unlettered immigrant from his native Greece, settled in Gettysburg and through hard work and perseverance achieved success in the restaurant business. His industry, honesty, and integrity won him the respect of his fellow townsmen.

Not being very familiar with the history of his newly adopted country, Mr. Meligakes was constantly beset at his inability to answer queries about Gettysburg made to him by tourists who patronized his restaurant. He determined to learn all he could about the area, its early history, the historic battle which took place there, and most important—the significance of all these things.

He searched available records, books, old newspapers, and talked with persons conversant with the region's history. As a boon which enabled him to understand all he read and heard about the region, since his formal education didn't amount to very much, he kept a dictionary near at hand and used it to help him understand the words and phrases which had been perviously printed about his newly adopted home community.

After years of laborious research and note taking, Mr. Meligakes determined to preserve this material for the benefit of others who might be interested in the compelling history of the battle which was the turning point of the War Between the States. This material is the basis of the book he wrote, "The Spirit of Gettysburg," which is now available to all persons interested in Gettysburg and its meaning.

In further recognition of Mr. Meligakes' impressive achievement, Mr. Charles McCarthy, a student and writer of history from Pittston, Pa., located in my congressional district, wrote an interesting background article which appeared in the Pittston Sunday Dispatch, January 31, 1960, and as part of my remarks I quote the article:

LOCAL INTEREST IN CIVIL WAR CENTENNIAL

Local interest in the Centennial Commemoration of the Civil War which will be held next year is heightened by the information that a 252-page book on this subject, "The Spirit of Gettysburg" was written some time ago by Nicholas A. Meligakes, the owner of the Plaza Restaurant and the Bookmart, an outstanding book and gift shop, both situated in Gettysburg.

His wife is the former Sophia Sfarnas, a former resident of 26 Exeter Ave., West Pittston, whose father, Peter D. Starnas, operated Sweetland in Pittston for over 30 years. This business is currently maintained by her brother, Ernest G. Sfarnas, one of Pittston's popular young businessmen.

In commenting on his book, "The Spirit of Gettysburg," Mr. Mliegakes said: "It is a recorded tribute to those brave men whose blood baptised this hallowed spot. Here, courageous men of the Blue met brave men of the Gray as destiny guided a divided nation to a new objective."

In the introduction to "The Spirit of Gettysburg," Paul L. Roy, the editor of the Gettysburg Times, lauded Mr. Meligakes for his tireless efforts in delving into the history of this phase of the War Between the States.

Dr. Robert Fortenbaugh, professor of history at Gettysburg College described Mr. Meligakes' book as "a graceful tribute to the American spirit by one who cherishes his American citizenship."

Safety for Household and Farm Chemicals

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, February 4, 1960

Mr. HARTKE. Mr. President, I recently invited John L. Harvey, Deputy Commissioner of the Food and Drug Administration, to appear before the Indiana Farm Safety Council, Indianapolis, Ind. Mr. Harvey accepted and made an address on the safety of chemicals which are used on farms and in households.

Much has been said about proper labelling of household and farm chemicals. Last session I conducted hearings of the Senate Interstate and Foreign Commerce Committee on legislation requiring proper labelling of hazardous household substances as a safeguard. More children die each year from poisonings than from the combined total of the so-called dread diseases—polio, diptheria, scarlet fever, and meningitis.

Mr. President, I commend Mr. Harvey's remarks to the attention of my colleagues, and I ask unanimous consent to have Mr. Harvey's speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SAFETY FOR HOUSEHOLD AND FARM CHEMICALS

(By John L. Harvey, Deputy Commissioner, Food and Drug Administration, U.S. Department of Health, Education, and Welfare)

I was delighted indeed to receive a request from Senator HARTKE to participate in this meeting with the Indiana Farm Safety Council in the old Hoosier State. While I knew that the date indicated would find me still busy indeed, I nevertheless took advantage of the occasion to meet with you. Your program chairman with the education committee, Mrs. Scheibner, has been most helpful in furnishing me with information, and I am indebted to your Food and Drug Director from Indiana, Tim Sullivan, for constituting a host and reception committee for me.

I shall, of course, discuss the safety of chemicals which are involved in the household and in farm life from the standpoint of the Federal Government and particularly from the standpoint of laws enforced by the Food and Drug Administration.

The tremendous, indeed revolutionary, advances in science and technology within the last 15 to 25 years is completely apparent to everyone. When we reflect upon the literally thousands of new and relatively new aids to agriculture, aids to health, aids to housekeeping, and aids to food production and manufacture which are chemical in nature, we get some idea of the monumental and complex problems that are involved.

In modern life it is essential that we have pesticides to produce food crops. It is essential that pesticides be capable of killing pests. Therefore it is necessary that we use in the production of our food crops substances which if not properly handled, controlled, and regulated, constitute a health hazard to the user and to the consumer. It is entirely necessary under our modern scheme of food production and distribution to employ many chemical food additives in order to have sound, ready-to-use food available for consumption thousands of miles from the point of production, months beyond the date of maturity, and ready to be used in the time that is allotted by the busy housewife who has many other things to do besides prepare meals. Indeed many housewives do a full day's work in an office, shop, or factory in addition to the preparation of meals.

To manage the household efficiently there are countless chemicals for cleansing purposes, for sanitation purposes, and to fill many other household needs which save hours of labor and make modern housekeeping possible.

Not too many years ago most of the drugs available, and particularly those that were available for self-treatment and household use, had the virtue of being relatively harmless—whatever may have been their value in curing the sick. Just as has been true in food and other allied industries, there have been in the past decade or so changes which amount to a revolution in the drug business. Drugs in use today are effective and are potent and are thereby tremendously more dangerous if misused than the simple remedies available in grandfather's day. In this evolution there has really been little choice. Modern inventiveness in science and industry has merely kept pace with demand and need so that it would not be possible for the trend to be reversed back to the good old days where life was relatively simple and our environment was relatively safe. We have developed a way of life which employs in our day-to-day living these substances which are tremendously important, tremendously valuable, and which contribute so much to our lives. Concomitant with such great value to us, they carry with them a significant hazard to our health and well-being if they are not handled properly and properly regulated and controlled.

This situation has created the necessity for governmental regulation and control of these items which we use in our daily lives, and the development of appropriate methods and schemes of adequate control so that the public may have the benefits and avoid the dangers which have constituted and do still constitute major problems in government.

The concern about these matters from a governmental standpoint has, of course, not been exclusively Federal. In some instances, and in some areas, the States, and even municipalities, have been more forward-looking than has the National Government. In other instances, the National Government has taken the lead, followed by appropriate legislation at State and other levels of government—generally in uniformity and conformity with the Federal pattern.

Because of the limitation of jurisdiction of the Federal Government, all of these problems of regulation must be shared by the States. The Federal Government must discharge its proper role because the vast majority of the products about which I am talking are nationally distributed and are articles of interstate commerce. This being true, they are, to a considerable extent, beyond State regulation.

Indiana, significantly, has displayed outstanding leadership in enacting and enforcing laws designed to protect its citizens more adequately from hazards associated with the use of chemicals on the farm and in the home. It is one of the pioneer States in enacting hazardous substances labeling law and we are looking with a great deal of interest at the development of this new law in your State.

Perhaps of necessity the different kinds of farm and household chemicals and the different uses to which they are put produce not a single all-purpose law, but a pattern of laws which are similar in character and which for the most part, from the Federal standpoint at least, are enforced along with

or as a part of the pure food and drug laws.

One important law which bears the distinction of being jointly enforced by two different Federal departments is the pesticide law of 1954. This law, or these laws, to be more exact, revamped the insecticide and fungicide law of the Department of Agriculture and amended the Federal Food, Drug, and Cosmetic Act enforced by the Food and Drug Administration. It provides that the U.S. Department of Agriculture shall deal with the registration and approval of pesticidal chemicals for use on the farm and in and around the home from the standpoint of their safety to users and safety to crops and farm animals and their usefulness for the purposes for which they are intended. At the same time it is recognized that when toxic pesticidal chemicals are used on farm crops and those farm crops are used as food for man and other animals that there are problems of carrying over the toxic residues in our food and feed supply. It therefore is provided that whereas the Department of Agriculture regulates the phases I have mentioned, the Food and Drug Administration is required to exercise its authority over the food supply by fixing regulations and tolerances specifying conditions and limitations under which residues of the pesticidal materials may be permitted or must be excluded from the foods and feeds. So under the law protection is afforded by the activities carried out jointly between the two departments.

The Food Additives Amendment to the Food, Drug, and Cosmetic Act is designed to accomplish the same kind of regulation of chemicals used in processed and manufactured foods that is afforded raw agricultural commodities upon which pesticides are used. The enforcement of the food additives law is entirely the responsibility of the Food and Drug Administration. In brief, it requires that chemicals not known to be safe must be proven to be safe before they may be legally used in foods at all. It provides for the issuance of regulations which specify the conditions and limitations under which such additives may be used.

In the drug area, the Food and Drug Administration enforces not only the general law which prohibits the marketing of drugs which are unsafe under the conditions specified in the labeling, but also the new drug law. This new drug law requires that no new drug may be placed on the market until satisfactory evidence has been presented by its manufacturer to demonstrate that it is not dangerous to users when used as directed.

In the field of cosmetics the Food, Drug, and Cosmetic Act prohibits the marketing in interstate commerce of cosmetic products which are dangerous or injurious when used according to directions or when used under conditions that are customary and usual. For example, a preparation intended for the hair, such as a shampoo, can easily bear directions to keep the product out of the eyes. On the other hand, the conditions that customarily prevail among most of us in shampooing our hair almost inevitably involve getting some of the shampoo material in the eyes. Of course, if it is innocuous it makes little difference, but if the material is capable of causing harm to the eyes then it is important that contact with the eyes not be had. Therefore, even though labeling may indicate that the product should not be allowed to get in the eyes, if the customary conditions of use are such that it is likely to get into the eyes anyway, the manner of labeling is not sufficient and the product must be kept off the market.

Now, in the case of chemical products used in the household and on the farm that are not pesticides, not food additives, not drugs, and not cosmetics, there is not at this time any comprehensive Federal law calculated to adequately insure safety of use. There is the Federal Caustic Poison Act which applies to 12 caustic and corrosive substances and which requires special warning labeling calculated to prevent misuse. This law has been of inestimable value in reducing the incidence of injury from lye, strong acids, and similar substances. It is, however, inadequate because it is limited to a dozen dangerous household chemicals in use in 1927, and our households now abound in hundreds of dangerous household chemicals.

As I indicated earlier, Indiana has passed a comprehensive law to require special labeling for this vast group of chemicals which constitute a hazard unless they are properly used. There is pending in the Federal Congress a comprehensive hazardous substances labeling act which in my opinion will go a long way toward providing a much greater degree of safety in the use of household chemicals. This proposed legislation is not significantly different from the Indiana statute, but if and when it is passed it will apply nationwide. Manufacturers of chemical products and chemical specialties generally have not only declared their support of this legislation, but, indeed, have taken a very active part in developing and sponsoring it. The particular bill which has already served as a basis for a hearing in the Senate in the 1st session of the 86th Congress is in fact not a bill introduced at the request of our Department. It was introduced by Senator MAGNUSON, of the State Washington, and I am sure it is of considerable interest to you that Senator HARTKE, of Indiana, is the chairman of the subcommittee which pushed this bill forward to a hearing. Senator HARTKE has contributed much to carrying this legislation forward and undoubtedly will lend his tremendous strength to its enactment. I know also that my good friend Senator CAPEHART, the senior Senator from your great State, is deeply interested in this protective legislation.

It appears that putting all of these various laws and the pending legislation just mentioned together, the Federal pattern of law will constitute quite comprehensive protection to the farm and household in the use of chemicals which require control and regulation. There is one remaining piece of legislation which is pending which ties into the same picture. Historically, coal-tar colors, which play a significant role in our food and cosmetic supply and which are also indispensable ingredients in some drugs, have been treated in a separate category and have been required to be specially certified for safety before they may be used. Advances in methods for evaluating safety of such products have demonstrated that many of these colors which have been considered suitable for use are not completely harmless in the sense that the law requires. It has therefore been necessary to discontinue authority for distribution of a significant number of the coal-tar colors. This has been necessary under the law even though in many instances these colors can be used under appropriate limitations in a variety of products even though in greater quantities and under other conditions they may not be wholly harmless. There is pending in the Congress a bill designed to modernize the color situation and provide for approval of all colors—non-coal-tar colors as well as coal-tar colors—on essentially the same basis as we now give approval to food additives and pesticidal residues; that is, after a determination is made that they are assuredly safe under the particular condition of use.

Now, I have attempted to point out in general terms that the Federal law pattern is directed toward safety for household and farm chemicals. I think it is worthwhile for me to add that laws of this nature are by no means self-enforcing and that they now require and will continue to require a significant amount of investigational and inspectional activity to insure that the rules for use of such substances are soundly established and that the rules so established are uniformly followed.

The cost of utilizing these boons to our standard of living is to be measured in terms of considerable expenditure of tax money by qualified experts employed by Government in guarding you against the dangers that can arise through improper, uniformed, and careless use of such products. It is therefore again worthwhile for me to point out that much of this tremendous effort which is being and will be exerted for your protection will fail in its purpose unless you as users and consumers take advantage of and apply all of the labeling information the law requires that you receive with these products, and that you use care and good sense invariably, and—above all—keep these substances out of the reach of children.

Address by Senator Thomas J. Dodd

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. IRWIN. Mr. Speaker, it was my privilege this past weekend to attend a luncheon of the Fairfield County (Conn.) Federation of Women's Clubs in Fairfield, Conn., at which my esteemed friend and colleague, Senator THOMAS J. DODD, delivered an inspiring and enlightening address.

With the permission of the House, I would like to introduce Senator DODD's remarks into the CONGRESSIONAL RECORD:

TEXT OF REMARKS BY SENATOR THOMAS J. DODD DELIVERED AT LUNCHEON OF FAIRFIELD COUNTY FEDERATION OF WOMEN'S CLUBS, JANUARY 30, 1960 AT CONTINENTAL RESTAURANT, FAIRFIELD, CONN.

We are living in an era that greatly resembles the late 1920's. At that time, our Nation was bathed in an optimistic glow of apparent prosperity. An enormously popular President, Calvin Coolidge, was preparing to leave office and his heir-apparent, Herbert Hoover, was waiting in the wings to assume the mantle of peace and prosperity.

Competent observers of our national life realized that the surface appearance of calm and well-being had been purchased at the cost of sweeping under the rug all of the really great problems of that time. The Republican administration of that day had ignored America's international responsibilities. It had ignored the farm problem. It had refused to make needed reforms in the field of mergers, trusts and stock market manipulation. It had paid no attention to the plight of millions of American workers who were laboring under sweatshop conditions for a wage that was inadequate to meet the minimum decent standards of living.

Calvin Coolidge was scarcely out of office when the great bubble burst and the false prosperity became a real depression. A series of disasters forced the Nation to face up to a host of economic, social, and governmental problems, problems with which his successor seemed unable to cope.

There is no need to recount the details of the great depression. It is enough to recall that for many, the promise of American life seemed at a shabby end. In desperation, the people turned to the Democratic Party and we led them out of the darkness.

Today, too, we live in an era of complacency, lethargy, and false optimism. Today, too, an enormously popular President is preparing to leave office and a new heir-apparent is ready to assume the mantle of peace and prosperity.

Today, too, we have reached the stage where we have swept so many problems under the rug for so many years that the day of reckoning must be close at hand.

For 7 years this administration has failed to develop a consistent foreign policy. It has failed to develop a realistic military policy. We have no transportation policy. We have no civil defense policy. There is no administration policy on the conservation of natural resources, no education policy, no comprehensive plans for eliminating urban slums. Certainly there has not been adequate administration leadership on questions of agriculture, small business, depressed areas, interest rates, inflation, and in other vital questions. One by one these problems have been swept under the rug where they lie in wait for the next administration to solve.

Just as there are similarities between the 1920's and the present, there are also basic differences.

Then the problem was ignorance—ignorance of how to deal with complicated forces being let loose at home and abroad. Today the problem is not so much ignorance, but lack of determination and vigor.

Then the machinery of government was inadequate. Today it is adequate but unused. Then the price of failure of government was several years of misery, injustice, and suffering for many millions of people. This was a terrible price, but it was one we could pay. Today the price of failure may be permanent and total defeat for our country, a defeat from which we cannot recover.

I hope that there is another difference. I hope that the American people are more informed, more perceptive, more concerned with public affairs today than they were in the 1920's. I think they are. I think there is growing concern among the American people that, under this administration, America is allowing itself to become a second-best nation—second best in military strength, second best in diplomacy, second best in scientific achievement, second best in education, second best in economic growth.

Once again the Democratic Party offers the people of America an alternative. Once again we are asking for a chance to fire up the locomotive of government and put the train back on the track.

We offer the people of this country peace through strength. We offer a stronger defense, a speedup in scientific research, a vigorous space program. We offer a revitalized educational system and an increased rate of economic growth. We offer programs in place of platitudes.

Will this be another 1928 for our party, or will it be a 1932? Will the Democratic Party be given a chance to prevent disaster, or will the Presidency be denied us once more until all we can do is salvage the ruins? We cannot know. But we do know this:

We are far better equipped to carry our message to the country than we were 32 years ago. The country is more willing to listen to Democrats now than it was then. We are better organized and better prepared to make our appeal. We have a wealth of outstanding candidates.

We have a formidable task to perform in the next 9 months. We have 9 months to convince the American people of the terrible danger of our position in the world.

Those of us in Washington will do our best to make the image of the Democratic Party clear and strong, but it is those of you at home who must carry the message street by street and town by town.

Working together, I think we can gain a great victory for our party and usher in, as we did in the 1930's, a new era of American strength, progress, and achievement for our people and for the world.

The President and Alarmist Talk

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The President and Alarmist Talk," written by David Lawrence and published in the Washington Evening Star of February 4, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESIDENT AND ALARMIST TALK—MR. EISENHOWER'S CALM HANDLING OF ARGUMENTS CALLED INSPIRING

(By David Lawrence)

There is something inspiring about the calm and dispassionate way that President Eisenhower deals with the alarmist talk that has been filling the headlines of late about the safety of the United States against Soviet attack.

Mr. Eisenhower, in his delicate position, naturally cannot do any saber-rattling. For the Soviets would criticize him as a warmonger. Yet he must answer the criticism at home that comes from generals, as well as politicians, who think America is losing the race or failing to catch up on missiles, trips to the moon, and various other endeavors in the field of science and exploration. The President said at his press conference yesterday:

"I am always a little bit amazed about this business of catching up. What you want is enough—a thing that is adequate. A deterrent has no added power, once it has become completely adequate, for compelling the respect of any potential opponent for your deterrent and, therefore, to make him act prudently."

This is but another way of saying that the United States has the military power today to destroy the Soviet Union and doesn't have to feel inferior because some other country may have more of certain types of weapons. It is the adequacy of our overall power that Mr. Eisenhower explicitly reaffirms.

But, it is asked, how is it that General Power of the Strategic Air Command can testify that, with 300 missiles, the Soviets can destroy our ability to fight back? The answer to that is the one that the general himself gives—the airborne alert. This means that the United States would have in the air at all times enough manned bombers to deliver a destructive blow in retaliation, and the mere knowledge that this can happen is enough to deter the Russians from making the attack.

General Power wants more money for the "airborne alert." He is sincere about it. He thinks this is essential. But the President and his other military advisers, including the Joint Chiefs of Staff, think that until a crisis is imminent—and it certainly doesn't seem to be for the next few months at least—the same money, about $750 million, can be put into the development of missiles and the improvement of other weapons of warfare. In fact, the President put it this way in his budget message to Congress recently:

"It is neither necessary nor practical to fly a continuous airborne alert at this time. Such a procedure would, over a relatively short period of time, seriously degrade our overall capability to respond to attack. What I am recommending is a capability to fly such an alert if the need should arise, and to maintain that alert for a reasonable period of time, until the situation which necessitated it becomes clarified."

But a general naturally isn't satisfied with this. It's his business to keep his defenses up. The civilian side, however, takes what are called calculated risks. It means that in this era of Soviet policy the belief is that Moscow will not take a chance on a nuclear blow at the United States, for the Soviet Union would have to face manned bombers from European bases as well as missiles from naval vessels, and the Russians would not wish to risk such destruction.

"I don't believe," said the President yesterday, "that anyone today can destroy all of our capabilities for retaliation, and they cannot destroy today enough of them that we couldn't retaliate very effectively to the point of destructiveness to them."

As for the so-called psychological aspect—the widespread belief that America might be forced into a posture of "second best"—Mr. Eisenhower says that in certain things the Soviet Union will continue to be first and America will be second. He cited the Olympic games as something that the Soviet Union won, even though it had to resort to professionalism in sports and virtually make the athletes a part of the Government personnel. Naturally, the Soviets would win such contests, but, as the President puts it, "What did we do with that?" Nobody has lost much sleep over that defeat.

As for trips to the moon and various planets, what is important is whether any military knowledge is gained by such stunts. This is carefully studied by the United States, whose experts in science are constantly at work on the same problem.

But, as the President explains it, the United States isn't going to alter its system of life and abandon individual freedoms and enslave people as they do in Russia, just to win first place in certain contests.

Mr. Eisenhower concedes that there are disturbing headlines arising out of such things as "hitting the moon," and that often an interpretation is given "far beyond its true meaning." He adds:

"I've heard people say: 'Well, soon there'll be colonies on the moon and they'll be shooting at the earth from the moon.' I saw that in one story. Well, this is long after you and I will be gone. That I'll assure you."

So the President pointed out that the things "we should think about and talk about more in the world are the values which we do treasure."

It's all a matter of proportion and perspective, but the basic fact is that the American defense system is up to date and progressing, and that it has the power to deter a potential enemy from attack by being able to inflict counterblows of massive retaliation.

Delhi Tech World Affairs Forums an Educational and Community Service

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. ST. GEORGE. Mr. Speaker, the vitality and strength of our democratic system rests on informed public opinion. Institutions of higher learning have among their responsibilities the training of young men and women who can critically examine and evaluate information. As part of its educational program the Agricultural and Technical Institute at Delhi, State University of New York, which is located in my congressional district, is presenting a series of five forums on "World Trouble Spots and the United States," designed to create a greater awareness on the part of its student body of world affairs, but more specifically to stimulate and enhance the student's ability to think critically about the world in which he lives.

The general education division of the college, with the cooperation of the student union, has this year brought to the Delhi Tech campus His Excellency Sir S. S. R. Gunawardene, Ceylonese Ambassador to the United States and the United Nations, and His Excellency Avraham Harman, Israeli Ambassador to the United States. Each Ambassador addressed large audiences on problems in southeast Asia and the Middle East and during the day of their respective visits informally met with students enrolled in the international relations course at the college. In future weeks, Delhi Tech students will hear the Ghanan, Indian, and United Arab Republic Ambassadors to the United States discuss the problems and issues of those areas.

Dr. William R. Kunsela, president of the college, in opening the forum series stated that—

> The Agricultural and Technical Institute at Delhi will continue vigorously to pursue every means to enrich the educational and cultural life of our students. This series—

Dr. Kunsela went on—

> allows all our students, as well as those enrolled in international relations, to understand the practice as well as the theory of international politics. These forums provide us with the opportunity at least to understand the ideas and values of people the world over.

In conclusion, he noted that—

> The benefits to be reaped from this series go far beyond our student body, extending to the people of Delaware County, whose attendance we invite and welcome, because we believe that this institution has the task of stimulating and enriching the cultural and educational life of the community.

Mr. Speaker, under unanimous consent, I place in the RECORD the remarks made by Dean William Kennaugh and Prof. Seldon Kruger who moderated the first two forums, and two newspaper accounts of the remarks of the Ceylonese and Israeli Ambassadors to the United States:

EXCERPTED REMARKS OF PROF. SELDON M. KRUGER IN INTRODUCING HIS EXCELLENCY, SIR S. S. R. GUNAWARDENE, CEYLONESE AMBASSADOR TO THE UNITED STATES, THURSDAY, JANUARY 7, 1960

A look at a map of the world in 1960 reveals the great changes that have taken place in Africa, Asia, and the Middle East during the last 20 years. More than 20 nations have won their independence and freedom since World War II. More than 50 percent of the world's population have become their own masters. For these new born nations the American people have a profound admiration—recalling their own struggle for independence and freedom. The bond of freedom is a strong unifying force. The nature of freedom and its maintenance does not require of all its advocates complete agreement on all issues. Rather, freedom draws strength from the diversity of different viewpoints.

The task is to find and strengthen political relationships based on mutual respect, as the underpinning of common economic, educational, and other endeavors. The stated goal of U.S. foreign policy is to offer a partnership which appeals to all free and independent men. During the next few weeks we shall be exploring "World Trouble Spots and the United States." This theme reflects our desire to inform ourselves of how U.S. foreign policy is viewed by others.

This evening's guest knows the mind of Asia and is one of the architects of Asian and Ceylonese independence. For more than 30 years he has served the cause of independence and freedom. Ladies and gentlemen, it is an honor and pleasure to present to you the Ceylonese Ambassador to the United States and United Nations, His Excellency, Sir Senerat Gunawardene.

[Excerpted from the Delhi (N.Y.) Delaware-Republican Express, Jan. 14, 1960]

CAPACITY CROWD HEARS CEYLON AMBASSADOR AT DELHI TECH

His Excellency, Sir Senerat Gunawardene, was speaker at the opening session of the forum series being held at the New York State University Agricultural and Technical Institute at Delhi. An audience of more than 600 filled the college auditorium to hear the distinguished speaker. Sir Senerat Gunawardene is U.S. Ambassador of Ceylon and permanent representative to the United Nations.

"World Trouble Spots and the United States," is the topic of the forum series. Ambassador Gunawardene began his talk by remarking that he had lived in the United States 6 years. It has been a period in which he learned that in no other country had he found people so generous, so understanding, so ready to show kindness. But he has also found the people of this country quite impatient with disagreements, too ready to emphasize the areas of disagreement. He assured the audience that there is more conformity in the world than they realize. It is the Americans who are nonconformists. He asked that they believe that in relation to the vast diversity of cultures in the world, that agrement in the realm of fundamentals is universal.

"I am happy," he said, "that now we in Asia, and you in America are in better agreement."

"Democracy and peace must be founded on the rights of the individual. America has a tremendous part to play in shaping the destiny of the world," he continued.

"Human understanding is a marvelous thing," said Ambassador Gunawardene. "The American ideals of freedom gave Asia and the countries of Africa the basis on which they have based their struggle for freedom. Understanding is more powerful than bombs."

"What have you done to promote this feeling of good will?" he asked. "Within the past 10 years Russia has spent 10 times as much on propaganda as the United States. They started their drive with cultural festivals, such as music festivals and youth conferences. They concentrated on Asia, Africa, and Central America. Young men and women coming from underprivileged areas found a paradise in their first impressions of Russia."

He revealed that the Government has been terribly remiss in its granting of scholarships to foreign students. Many communities have done their level best to welcome exchange students and teachers, but the total number is a pitiful handful compared with the 150,000 foreign students in London, and the estimated 300,000 in Moscow.

"Has the United States had one music festival, or one youth conference?" and he went on with the cryptic remark, that such meetings were much less expensive than rockets or bombs, and much more effective in promoting the human understanding needed for a peaceful world.

Ambassador Gunawardene also explored the field of economic aid. So long as ignorance, disease, and oppression exist in areas of the world, there is cause for war. For this reason economic aid should be given to those areas, but it should not be given to buy friends, or as a business transaction, but from pure humanitarianism. Here again Russia has the edge with her offers of aid and trade agreements. Goods bought and purchased by or from them at 2½ percent interest as against our 5½ force countries to deal with Russia.

He pleaded for intelligent self-interest on the part of America. "You have more food than you can ever want. What have you done about distribution to starving peoples? And machines, what are you ever going to do with all you make? See that countries are developed so they can buy those machines," he admonished.

Delhi Tech World Affairs Forums an Educational and Community Service

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. ST. GEORGE. Mr. Speaker, the second speaker in the above-entitled forums was Israeli Ambassador to the United States, His Excellency, Avraham Harman.

EXCERPTED REMARKS OF DEAN WILLIAM F. KENNAUGH IN INTRODUCING HIS EXCELLENCY, AVRAHAM HARMAN, ISRAELI AMBASSADOR TO THE UNITED STATES, THURSDAY, JANUARY 21, 1960

It is a pleasure to welcome you to the second program in the series of the Delhi Institute forums. Before I introduce the speaker of the evening I should like to repeat some of the statements made at the previous session for the benefit of those who are attending the forum for the first time.

The forum series is sponsored jointly by the General Education Division under its chairman, Prof. James Armstrong and the Student Union under the guidance of Prof. Klare Sommers. The programs were conceived by Prof. Seldon Kruger of the Gen-

eral Education Division as a unique and practical way to bring students in our regular courses face to face with some of the real problems that exist in the world of politics. Thus, in an earlier forum series in connection with a course being taken by our students in American Government, officials of State and local governments appeared in this auditorium. The present series is presented in conjunction with Professor Kruker's course in international relations. During the course of this series we will have heard from the Ambassadors from Ceylon, Israel, Ghana, the United Arab Republic, and India. We are happy to be able to share these experiences with our friends and neighbors in Delhi and the surrounding communities.

I would be somewhat remiss if I did not point out at this juncture that in this current series we have leaned on the experience of a man who so successfully conducted the Andes forum for 2 years. That man is Mr. Ben Raymond, director of public relations of the college.

The theme running through this forum series is "World Trouble Spots and the United States". Now to some people the word "trouble" spells disaster and doom and is to be avoided at all costs. However to me it has always seemed that the word "trouble" can also be defined as "opportunity." First, it is an opportunity for the person or group in trouble to bring to bear on the problem the full extent of his or its human and material resources. At such times individuals and groups rise to full stature.

Second, trouble is an opportunity for friends and neighbors of the one in trouble to develop an understanding of the problem and an empathy for the one in trouble and to bring to bear their own human and material resources as a gesture of true friendliness and neighborliness.

And so tonight we, as friends and neighbors of the small and new nation of Israel will have an opportunity to acquire a better understanding of the problems of the Middle East. At this time it gives me the greatest pleasure to introduce to you a man who has served his government with distinction in many important posts. I introduce to you His Excellency the Honorable Avraham Harman, Ambassador to the United States from Israel.

[Excerpt from the Oneonta (N.Y.) Star, Jan. 23, 1960]

ISRAELI AMBASSADOR SAYS NATION SEEKS PEACE WITH ARABS—NEGOTIATIONS SHOULD SETTLE PROBLEMS

Over 600 persons heard Ambassador Avraham Harmon, of Israel, speak before the second meeting of the Delhi forums on Thursday night.

The Ambassador pointed out that if Israel's newly gained independence is to flourish it must have more industry and the "know-how" to work and expand such industry.

"After one gains independence," he pointed out, "there is a political and physical letdown. Once independence is attained, there is a sort of honeymoon period * * * our flag was raised for the first time * * * we were admitted to the United Nations. But still, what have we got? We cannot eat a flag, or live under it. One needs a roof."

In comparing the rebuilding of Israel with the birth of America, the Ambassador said that America was founded on virgin territory while Israel is building a new civilization on the ashes of a former great civilization.

"Unless Israel avails itself of all its resources, it will go to rack and ruin," he said.

The remainder of Ambassador Harman's address follows:

"The greater part of Israel is uncultivated and will remain so until we bring water to it. One of our problems is the conversion of the country's brackish water which is unsuited for agricultural uses. We have come a long way in reaching our agricultural objective, and are producing about 70 percent of our food needs. We are close to European markets for any surplus we may have."

"Israel is faced with two problems," the Ambassador said, "higher living conditions and a greater population. The major answer must lie in industry. Our two basic problems are the lack of raw materials, and the know-how.

"We have elements for great chemical expansion, both in copper and iron. We have a great many skilled workmen who have the know-how in developing our industrial diamonds industry, which has grown to $40 millions per year.

"A major internal problem is how to weld our mixed refugees from 20 lands, not into a standardized or uniform nation, but a unified nation. It is not easy. Our common language is Hebrew. We have our backs to the wall, or rather to the sea. We were embattled and besieged. This is our last opportunity for our people to protect its place in the sun. It is a great cohesion force." And he repeated, "Israel will not be destroyed."

"The big question is 'where do we and the Arabs go from here'? The present situation is not satisfactory. The world has been living in a twilight period, with neither peace nor war. Peace is a positive concept.

"We do not say that if you want to be a friend of Israel, you must not be a friend of the Arabs. Just as we demand the right of independence, they, the Arabs, also have the right of independence. We would like to see nonaggression pacts between Israel and the Arab Republic; an inspection of armaments by agreement, and thus save the resources we all need so badly.

"Negotiation is the only answer to the situation. We must all recognize the other man, and give and take, treating each other as equal. The key to the world situation is in the Middle East; and we are closer to using that key than we were a few years ago."

At the conclusion of the session in the Tech gymnasium, Ambassador Harman attended a reception, given in his honor, by the student union of the college.

Liberties Award for "Herblock"

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. HENNINGS. Mr. President, certainly one of the greatest political satirists of this era is Mr. Herbert Block, better known as "Herblock," the editorial cartoonist for the Washington Post.

Mr. Block's wit and cartooning ability are matched only by his courage and consistent defense of civil and constitutional liberties. This courage, known to many of us here in Washington, has been recognized this year by the New York Civil Liberties Union, which has awarded "Herblock" the 1959 Florina Lasker Award.

I ask unanimous consent that an editorial dealing with this award and published in the St. Louis Post-Dispatch be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Feb. 2, 1960]

LIBERTIES AWARD FOR "HERBLOCK"

Last year the Florina Lasker Award of $1,000 for consistent and outstanding courage and integrity in the defense of civil liberties went to five Negro students who stood fast in the face of taunts and dangers at Little Rock's Central High School. This year the award, which is administered by the New York Civil Liberties Union, goes to Herbert L. Block, editorial cartoonist for the Washington Post.

In these two contrasting choices is striking recognition of the fact that the battle for freedom must be waged on many fronts and that the contributions may vary greatly in origin and nature. The five Little Rock boys and girls are from among many hundreds of thousands of high school students over the country. Herblock, on the other hand, is in the front rank of cartoonists, syndicated in more than 200 newspapers and known literally around the world. More than 1 million copies of his pamphlet, "Herblock Looks at Communism," have been printed in many languages and distributed overseas.

If anyone has stood more strongly than Herblock against the erosion of the liberties of the individual in the years since World War II, his name does not come to mind. This bold, keen cartoonist has hit hard and often at the McCarthyites, the inquisitors, both private and governmental, the misguided, frightened conformists. He knows the folly of harassing special oaths, the evils of censorship, the wrongs in official suppression of information a self-governing people must weigh and act on. And he has told it all in his cartoons, as readers of the Post-Dispatch are aware.

Herblock was greatly missed during his recent heart illness and his friends take it as a happy omen that he is now back at his drawing board. We can wish for him nothing better than the fullest return of his great powers of ridicule, satire, exposure, and burning indignation.

Some Hurdles and Hassles of the 1960's

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech delivered by my good friend and former Under Secretary of the Treasury, Mr. A. L. M. Wiggins, of Hartsville, S.C., in the RECORD.

I hope that every Member of Congress will take a few minutes of his valuable time to read Mr. Wiggins' speech entitled "Some Hurdles and Hassles of the 1960's."

SOME HURDLES AND HASSLES OF THE 1960'S

(By A. L. M. Wiggins)

Following the current pattern of public discussion, I wish to present some of the

opportunities and hurdles of the 1960's. The general prosperity of recent years has diverted us from dealing with many of our most serious problems. We have swept them under the rug with the thought of getting around to them later on or that they might somehow go away. Recent developments at home and abroad bring into sharp focus the urgent necessity of not only facing these issues but of doing something about them.

My basic thesis is that in the coming decade our economy can and should move ahead at a rate that will serve the increasing needs of our growing population and that will maintain our world leadership. It calls for maximum growth in terms of productivity with reasonable stability in the value of the dollar.

WORLD AFFAIRS

The changing pattern brought on by the world revolution of the past half century presents today some clearly defined areas of probable developments in the years ahead. Within recent years, there has been a turnaround in the financial and economic affairs of many countries of the world. American aid to Western Europe, Japan and other countries under the Marshall plan has resulted in their vast capital expansion of modern productive facilities, utilizing the most modern techniques for efficient and economical operations and has made possible a substantial advance in their standards of living. With productive labor costs in many of these countries one-third of ours or less, they now enjoy a competitive advantage in world trade which once was ours.

The strengthening of European currencies with convertibility, plus a resolute containment of inflation and a rapid increase in productivity and exports have resulted in a favorable change in the balance of payments of most of these countries. The dollar and gold shortages of many European countries, which plagued them for years, have now become a dollar and gold deficit of payments for the United States. The large gifts and grants by this country, the maintenance of vast military installations throughout the world, the heavy investment by American capital in productive enterprises abroad and the reduced competitive position in world markets of many American industrial products have resulted in a net deficiency of our balance of payments in the past 2 years in excess of $7 billion and an outward flow of our gold supply of more than $3 billion. While this adverse flow is not an immediate threat to the dollar, the continuing loss of gold can reach a point where the integrity of the dollar, as well as the possibility of devaluation, might be seriously questioned abroad. How we handle this situation is extremely important to the economic development of this country and to the world.

The increased productivity and unity of effort of the six-nation Common Market of Europe, and the efforts of the European free trade area to solve mutual problems and the possibility of their eventual cooperation have vast potentialities in increased production, in improving standards of living and in increasing markets throughout the world. The hope is that the policies and programs of these unified areas will result in a high degree of cooperation with the United States and other nations on problems of world trade rather than become a serious hurdle.

Another challenge is the awakening of many undeveloped countries to their potentialities of improved living standards through increased productivity and better health. Such improvements, though slow, will not only increase their importance as producers but as consumers as well, thereby creating new markets for the production of other countries. The self-interest of the United States requires our continuing aid to these undeveloped countries.

We must also deal with the emerging economic power of Russia and its program of economic and political penetration of the free world.

The challenge presented to us is to increase productivity in the United States, and at costs that are competitive in world trade and, at the same time, maintain a stable dollar in which the world can continue to have confidence. Only in this way can we participate effectively in the growing international trade and maintain the strength of our position of world leadership.

INFLATION

Problems of the continuing erosion of the value of the dollar constitute a most serious hurdle. The great American Bernard Baruch makes the point that while inflation, like sin, is denounced regularly, unfortunately, like sin, it is also tolerated, encouraged, and even enjoyed by many. He calls inflation a cancer which is eating away our economic and financial health, undermining our security and spiritual strength and responsible for much of the burdens of taxation, of swollen prices, and of Government debt. He predicts that if we allow this malady to run unchecked, it will impoverish the people and destroy the Nation.

During the past decade, growth in this country, measured by various indices has been some 50 percent but of that 50 percent, one-half has been eaten up by inflation. In stable dollars our 10-year growth has been nearer 25 percent.

The present deficiency of investment funds in terms of current demand is caused, in part, by our failure to accumulate savings fast enough to meet investment and commercial needs in the inflated dollars required. Most significant is the reluctance of the investor to buy future dollars through the purchase of bonds bearing fixed interest when he lacks confidence in the value of the dollar he will receive in payment. The result is an unnatural diversion of savings into common stocks, in spite of interest rates that are 50 percent higher than average dividend income. No prudent person will buy a 10-year bond except at very high interest rates if he expects to lose one-fourth of the value of the dollars he will receive 10 years hence. This was what happened in the past decade.

A U.S. savings bond, which in many ways is our most important and popular investment security, that was purchased for $75 10 years ago, when cashed last year produced $100, an increase of $25. Of this $25, Federal income taxes took $5 and inflation took $19. The investor actually received $1 in purchasing power for the use of his $75 for 10 years. The same thing happened to our savings accounts, life insurance and other fixed dollar assets. While much of this dollar attrition was the result of the Korean war, it has continued at a creeping pace during the succeeding prosperous peacetime years.

It is estimated that in order to produce an annual increase of $1 of gross national product, an investment of $1.65 must be made. This means that if the GNP in this country is to increase to an annual rate of $750 billion by 1970, an investment of more that $400 billion will be required. A substantial part of this investment must be provided through loans to finance industrial expansion and public and private construction. Unless the saving and investing public is convinced that the dollars with which they will be repaid will be in reasonable relation to the value of the dollar invested, there will be an increasing unwillingness of investors to buy fixed dollar securities, even at higher rates of interest. Inflation discourages prudent saving and investment and contributes to speculative fever.

If our people are so little interested in the effects of inflation on our national economy that they are unwilling to accept the disciplines needed to preserve a reasonable stability of the value of the dollar and if they accept the inevitability of a continuing erosion of the dollar, the result eventually will be devaluation. If, year after year, the value of the dollar becomes worth less and less, it eventually becomes worthless. There is no reason to expect that the ultimate result of persistent inflation in this country will be any different from what has happened in other countries throughout history.

Although there are many theories about inflation, we know that increased costs, of which labor is the principal ingredient, result in increased prices; that increased demand, fed by easy monetary policies and superficial theories of abundant purchasing power, will pull prices up; and, that excessive increases in the money supply and credit cheapen the dollar and stunt real economic growth. We must not let our monetary policies be used to validate or support a continuing wage-price spiral. Many thoughtful people, including the President's economic advisers, are convinced that this country is headed for a severe "bust" if the wage-price spiral keeps on turning.

There is a cause for concern that while inflation seems to be increasingly unpopular in this country, the principal factors contributing to inflation, such as easy money, greater Government spending and spiraling wage and fringe benefits year after year, still have strong advocates who blindly pursue their objectives with reckless disregard for the ultimate consequences.

If the Federal Government spends more than its income and covers the difference by creating money or near money, such as short-term Government securities, inflationary pressures increase. No one has to be a student of finance to know that if the Federal Government must finance the refunding of its maturing obligations and its current needs in the short-term field and is excluded from the investment market for securities beyond 5 years, the pressure on the short-term market will, as it has, drive short-term interest rates ever higher. It is hard to believe that any Member of Congress would be willing to gamble with the national economy and the possibility of a serious financial crisis by trying to lock the huge national debt in a 5-year explosive prison.

FISCAL IRRESPONSIBILITY

We have heard a lot about scandals in recent months but the most serious scandal directly involves the Federal Government itself. It is the failure of the U.S. Government to make payments on its huge debt. It is a disturbing thought that throughout the present generation of some 30 years, the solemn promise of the U.S. Government to pay has not meant what it said. Its promise to pay has been nothing more than a promise to renew, to refund, to revalue the debt, to reshuffle its creditors. What financial heritage of honor and integrity is this generation passing on to succeeding generations in creating and increasing an enormous Government debt and refusing to adopt a program to pay off any part of it, even in years of prosperity?

According to the budget estimates of the President, Federal Government revenues may exceed expenditures in fiscal 1961 by some $4 billion, which he would apply on the Government debt. This would be at least a token payment of slightly over 1 percent. Will there be a ground swell of resounding public approval of this honest and proper use of these funds? I sincerely hope so. But the spenders are gleeful over the prospect of handing out a billion here and another billion there. Taxpayers savor the possibility of getting a $20 per capita reduction in taxes. Shall we not show the good faith of our country by paying on the debt when we can?

In 4 years out of 5 over the past three decades, the Federal Government has paid out more than it received. Its greatest peacetime deficit of $12.5 billion occurred in fiscal 1959, a year of growth and national prosperity. Much of the financial strain and stress of today is a result of that fiscal disruption. It requires no financial seer or student of economics to understand that no institution and no government can continue to live beyond its income and disregard the integrity of its promises to pay without the eventual loss of confidence at home and abroad.

TAXES

The inequities and imbalance in our Federal tax structure have long been recognized as deterrents to economic growth. We have refused to come to grips with this problem. Our tax system is a product of war necessity which has been allowed to continue without substantial change. Present rates of taxes on personal income approach confiscation at the higher levels. Corporate income tax rates, when applied to overstated income as a result of inadequate depreciation charges, represent, in effect, a capital levy. Income taxes and other direct taxes levied by the Federal Government produce 84 percent of its income, the highest proportion of any major country in the world. The proportion in Canada is 59 percent and in Great Britain 55 percent. The result is that the ups and downs of our economy have an immediate and severe leverage effect on the Federal budget, particularly in a recession. Witness the $12.5 billion deficit in fiscal 1959 following the moderate and short 1957–58 recession. We must broaden the tax base for greater stability and remove the deterrents to investments and savings in our income tax structure if our economic growth in the 1960's is to match our aspirations.

ROLE OF GOVERNMENT

We should now determine and set the role of government in our economy for the coming decade as one of providing an environment in which the forces of a free, competitive private enterprise system can operate more effectively. It is a warning for us that while the Socialists of some of the European countries have renounced economic panaceas, have come to accept realistically the fruitfulness of private enterprise in their party declarations and are retreating from the deadening effects of state socialism, in the United States we continue to embrace the Socialist concept of enlarging the role and functions of government in our economy.

There are some so-called liberal Members of Congress and others of similar inclination who welcome the present tight money situation as an opportunity to enlarge the role of government by imposing selective credit controls which, in effect, would not only ration but control by bureaucratic determination the supply and availability of credit. The succeeding steps would be price controls, and then profit controls, and eventually wage controls. The basic philosophy of some so-called liberals is that government can operate the economy by laws and rules and regulations more effectively in the public interest than can the operation of a free, competitive private enterprise system. Many of them believe that a balanced budget is antisocial, that a greatly expanded Government spending program would accelerate economic growth. They confuse Government spending with economic growth. There are, of course, certain programs and purposes where the public interest requires the diversion from private spending to public spending such as for national defense and education. There are many other areas, however, in which government spending contributes little, if anything, to economic growth. Advocates of increased government spending present charts and graphs to show that a forced-draft annual growth of 5 to 6 percent in the national production generated through government spending would create a steamed-up prosperity. When compelled to take a stand on the resulting inflation, they speak glibly of reasonable and tolerable inflation, ignoring the simple fact that even a so-called mild inflation of 2 percent a year compounded would clip more than 20 percent from the value of the dollar in a single decade.

ORGANIZED LABOR

Recent events have brought the American people to a recognition of the power of organized labor in this country to affect the Nation's economy. Expanding business was brought to a suffocating slowdown by the strike in the steel industry. The danger of economic paralysis as the result of the threat of a new strike forced an acceptance of union demands. There is a little doubt that, even though immediate price increases may be avoided, the terms of the settlement in this large, basic industry will have an inflationary effect and are not in the interest of our economy as a whole.

A realization of the uncontrolled economic power of large labor organizations and the concentration of authority in their leaders to issue orders that can bring this country to its knees have caused increasing concern and even fear among thoughtful citizens.

There is a rising tide of indignation throughout the country over this concentration of authoritarian power and monopolistic control under which a few labor leaders in this country can, at their will, bring our national economy to a grinding stop. It has been the history of this country that whenever the operations of any segment of our economy had such power and used it for self-advantage and against the public interest, the people through government have stepped in and restrained the exercise of such power. Government regulation of railroads was imposed at a time when railroads had a monopoly of transportation. Antitrust laws were passed when business concentrations became so great as to threaten competition. Regulation of the issue and sale of securities was imposed when the public needed protection against the unscrupulous.

For some 30 years, Government has promoted the growth of unionism in the interest of the vast body of workers who were at a disadvantage in dealing with their employers. Union activities were granted immunities from laws under which the rest of our economy operates. The power to strike was accepted as a necessary instrument to enforce the rights of employees. Authority was given under which all workers in an industry could be forced to become members of a union, thus giving monopoly control to union leaders over their members. From these special privileges has arisen a concentration of uncontrolled economic power unequaled in our history.

For many years, it was thought that a reasonable growth of union power was in the public interest. It is now recognized that little, if any, consideration of the public interest is given by unions in their demands. It is notorious that many so-called collective bargaining negotiations are really nothing more than the submission of the demands of a union to employers and that there is no place at the table for a representative of the public interest. Some of these negotiations are merely a private deal in which employer and employee cut for themselves a bigger slice of the national economy and pass the costs on to the public in increased prices whenever possible.

The result is usually an increase in wages unrelated to increases in productivity plus additional so-called fringe benefits with more and more payments for time not worked and goods not produced. It is said that the fastest growing "occupation" in the United States is that of not working and being paid for it. Some industries are paying compensation to five employees for the productive time actually worked by four. So-called fringe benefits represent costs equal to 20 to 30 percent of the payroll and are still rising. While some of these benefits are desirable and proper, the additional costs are paid for in prices to the consumer.

Public realization of the concentration of the monopoly power of union leaders over their members under union shop contracts and their economic power to choke large segments of our economy to suffocation without any consideration of the public interest, have resulted in a widespread demand that Government take effective action to restrict present abuses of union power.

One plan suggested is for the arbitration of labor demands by Government arbitrators after all other efforts have failed. Another is that public factfinding boards be set up to recommend terms of settlement. Such plans have the merit that they might terminate strikes and force settlements but there is no assurance that the findings of such boards would be based upon considerations of the public interest.

It has also been suggested that in such cases, public representation should consist of judicial bodies set up by the Federal courts with statutory authority defining their scope and powers to disapprove any proposed terms of settlement they find to be adverse to the public interest. Under this proposal, recognition would be given to the superior claims of the public interest over all other considerations. No strike would be permitted over terms of settlement that were declined by such judicial body as being against the public interest.

Another suggestion is that a Federal court be established to which all proposed labor settlements could be appealed for a determination not for arbitration of the issues involved but for consideration of such terms as might affect the public interest.

In view of the serious effect of many labor settlements on the national economy and the coercive powers of the unions to enforce their demands, the time has come when the public interest should be represented in an effective manner in cases where the public interest is substantially involved.

Re House Concurrent Resolution 459

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. KELLY. Mr. Speaker, I wish to call the attention of the House to the fact that I was incorrectly listed in the CONGRESSIONAL RECORD for February 2 as having voted "present" rather than "aye" on House Concurrent Resolution 459. I have determined that my actual vote is correctly recorded in the Journal and I have been assured that the error in the RECORD of the proceedings on February 2 will be rectified in the permanent RECORD.

Mr. Speaker, I do indeed support House Concurrent Resolution 459. I am privileged to be associated with the splendid leadership being shown by the Chairman of the Subcommittee on Inter-

American Affairs in safeguarding the interests of the Congress in this important matter.

I quite agree that flying the Panamanian flag in the Panama Canal Zone would be a major change in policy and a variation in the traditional interpretation of the several treaties between the United States and Panama on the matter of sovereignty in the Canal Zone.

This matter of flying the Panamanian flag became a matter for consideration during the negotiation of the treaty of 1955 with Panama. If necessary it should become a matter for new treaty negotiations in which the ultimate approval role of the Congress is clearly set forth in article II, section 2 of the Constitution of the United States.

I appreciate this opportunity, Mr. Speaker, of making my position clear on this important matter.

We Need More Color in Our Currency

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of my colleagues a most interesting proposal which I have received from a constituent.

The article's theme revolves around the practicality of giving our currency a new look and I think those who take the time to read it will perhaps be stimulated to think about an aspect of our paper money which heretofore has had little attention.

The article follows:

WE NEED MORE COLOR IN OUR CURRENCY

(By Michael Shuwarger)

It is surprising that we Americans who welcome periodic changes in almost everything around us have never raised a voice in protest against the eternal sameness of the product we handle most frequently—money currency. We look impatiently toward the unveiling of the new automobile styles, talk excitedly about the latest fashions, queue up for a look at a model house, but don't seem to mind it a bit that the color of our paper money has not changed for as many years as anyone can remember.

Ever since the first Treasury notes were issued in 1862 to finance the Civil War, the U.S. paper currency has always been green on one side. In 1928 the size of the bills was trimmed down to 6 5/16 by 2 11/16 inches, but the color has never been changed. True enough, our main interest in money is its purchasing power, not its visual appeal. Few of us, if any, look at it from the point of view of artistic satisfaction, although the skill and the imagination that enter into the engraving and printing of our dollar bills are on a par with the most elaborate works of art.

Much more important than the esthetic consideration is the need to increase the visual differences among the various currency denominations. At present all U.S. money, from the lowly dollar bill to the almost mythical $10,000 banknote, is green on one side and drab grey on the other. Such uniformity makes it necessary to examine closely every bill to avoid mistakes in counting money. We must look very carefully at every note to make sure that no $5 bill is paid out when only a dollar was intended. Errors directly traceable to the great similarity of the various denominations are considerable. In banking firms and other institutions where a tremendous turnover of paper currency is routine, the strain on the clerks counting money is always very heavy.

Why not keep the green color of the dollar bill as a bow to tradition, but make the $5 denomination, let us say, red, and the $10 one blue? We can use other colors to brighten up bills of higher value, for example, orange for $20, silver for $100, and shiny gold for a thousand-dollar note.

If the various denominations were distinguishable by colors, the sorting of money would no longer be an eye-blinding task. A bank teller could go through a wad of paper currency and quickly separate the various kinds of bills. It would be possible to glance into our wallets and without any effort pick out the denomination we want. There is also another benefit to be derived. The introduction of different colors into our money would make many counterfeiters unhappy. In the past the manufacturing of phony bills often involved no more than the raising of the value of the denomination, such as the changing of $1 to $10 by adding a zero. The forgers got away with it because few people can remember what men's portraits belong on different banknotes, and those who do hardly bother to look at the exact design. If a $10 bill were different in color from a $1 bill, the simple addition of a zero would no longer do the trick. The counterfeiters would have to design complete plates if they were to stay in business.

What possible objections could there be to a new look in our currency? Certainly there is nothing sacrosanct about the green color on all our folding money. No additional cost of printing new notes is involved, for old plates can be used, and it is quite obvious that blue or red ink costs no more than green.

Just a trifle more costly would be another possible improvement in our paper currency. A tiny perforation or an embossment somewhere on the note would make it possible to identify money by touch. This would be an immense boon to the blind or to the people with poor eyesight who are frequently swindled when dealing with conscienceless crooks.

In some foreign countries the distinction among the denominations is achieved through variations in size of different banknotes. The advantages of easy identification, moreover, are more than offset by the awkwardness of handling paper currency which is hard to fit into a billfold and is otherwise not easy to manage. The American system is much superior to most foreign currencies and could be made nearly perfect if the traditional greenbacks were to be joined by bluebacks, redbacks, and goldbacks.

Federal Dollars and Education

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. WESTLAND. Mr. Speaker, traditionally the education of our children has been in the hands of local school boards. This is as it should be, because it gives the parents of our Nation the opportunity to keep a watchful eye on what is happening in the schools attended by their children.

Recently, however, there has been an insidious campaign to transfer this traditional responsibility from the State and local communities, where it belongs, to a Federal bureaucracy. The need for higher teachers salaries and the need for additional school facilities are the guises under which this campaign is being waged.

Mr. Speaker, I am opposed to the Federal Government paying teachers' salaries and am opposed to the federalization of our education system.

The Everett (Wash.) Daily Herald published an editorial January 21, which points out that Federal dollars is not the magic symbol that will bring quality education to our children. This newspaper speaks for a great many people in my hometown and the Second Congressional District. It is for this reason that I reprint this editorial in the CONGRESSIONAL RECORD.

The editorial follows:

DOLLARS ALONE CANNOT GIVE SCHOOLS THINGS THEY WANT

The dollar sign is not the magic symbol that will bring quality education in the form of good teachers, good programs, and adequate facilities.

This is the conclusion reached in considering the action of the National Education Association in placing a flat billion-dollar-a-year price tag on what it conceives to be wrong with the classrooms across the country.

NEA takes the stand that pouring $4 billion into the schools over a 4-year period will solve all the problems. It has opened a new campaign in behalf of the Murray-Metcalf bill which advances the proposition that lavish largesse from the Public Treasury will obviate our school problems.

We will admit that education cannot come from a financial fairyland. But to assume that spending alone will provide all the answers needed is refusing to recognize the basic causes of educational shortcomings.

New classrooms, increases in salaries, additions to the present number of counselors will not improve teacher training.

Dollars alone cannot give educators, administrators, and teachers what it takes to carry out their work.

Dollars alone cannot shape human nature.

Raiding the Federal Treasury will in no way reimburse the local school districts, nor make it easier for them to meet the challenge of turning out students who are qualified to face the challenges they in turn face in higher education and through life.

When the NEA asks 700,000 teachers to apply pressure in behalf of the Murray-Metcalf bill it is a call to surrender their rights and the responsibilities of school boards and to place them all at the mercy of Federal bureaucracy.

It is merely seeking the easy way and the quickest way out. Federal control is the last element that should enter into the problems that are faced daily by school officials in every State of the Union.

Lewis M. Herrmann

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. WALLHAUSER. Mr. Speaker, today I would like to pay tribute to an out-

standing citizen and labor leader of my home State of New Jersey who has given much of his energies and fertile mind to the betterment of our Nation and its people.

He is Mr. Lewis M. Herrmann, of Newark, N.J.

It is a most auspicious day for giving recognition to Mr. Herrmann, for today he is celebrating his 75th birthday. For those of us who know Mr. Herrmann well, he is not today 75 years old, but, rather, he is 75 years young.

Additionally, the year 1960 is the 21st anniversary of Mr. Herrmann's pride and joy—the New Jersey Labor Herald, which enjoys the official endorsement of the New Jersey State Federation of Labor. Mr. Herrmann was the founder of this widely read publication and serves as its editor and publisher.

This evening members of the New Jersey congressional delegation will have the opportunity of personally extending birthday congratulations to Mr. Herrmann at the anual reception and dinner of the New Jersey State Chamber of Commerce at a hotel here in Washington, D.C. Mr. Herrmann is a regular attendant at these get-togethers and I cite the fact just to give an indication of the wide interest he has in affairs of government and in the field of management and labor relations.

Throughout his very active life, Mr. Herrmann's accomplishments have been many, but I would like to call particular attention to one endeavor that might well be emulated in other areas of our Nation.

While serving as a member of the New Jersey State Assembly from 1947 to 1951, three terms, as a Republican representative from my home county of Essex, Mr. Herrmann sponsored legislation which created the Labor Institute at Rutgers University, the State University of New Jersey. I believe the accomplishments of this institute, now known as the Institute of Management and Labor Relations, are well known throughout the Nation.

Mr. Herrmann's interest in the present and future of the institute continues to burn brightly. He is chairman of the institute's advisory council and is serving as chairman of a committee raising $550,000 for the erection of a labor center at Rutgers. The last report I heard was that the fundraising drive was nearing the $500,000 mark.

As the legislative sire of this institute, Mr. Herrmann can well look with great pride upon this accomplishment.

In recognition of his work, Rutgers University, on August 4, 1954, presented Mr. Herrmann with its "Award of Achievement Medal and Citation" for his "Service to Labor and Education." Then on August 14, 1956, the university gave Mr. Herrmann its "Special Award for Service to Labor and Education."

In paying this tribute to Mr. Herrmann, I would like to cite just a few more of the endeavors in which he has actively engaged and other awards that he has received. Some of these are:

Through appointment by President Eisenhower he serves as a member of the National Advisory Council for the U.S. Small Business Administration.

On September 6, 1959, he was presented the annual award of the National Labor Temple Fellowship for "Distinguished Service to Labor and the Nation."

In 1954, he was named the outstanding American Federation of Labor member in New Jersey and was presented with the award of merit at the New Jersey federation's annual banquet.

In World War I, Mr. Herrmann served as a sergeant of infantry in the U.S. Army, and during World War II, he headed a special War Department mission to the South Pacific combat area.

He serves as a member of the board of governors of the Northern New Jersey Multiple Sclerosis Society.

Mr. Herrmann has been commander of American Legion Post No. 104 and commander of the Atlantic County District, American Legion, and for 3 years was publicity director of the American Legion, Department of New Jersey.

For 15 terms Mr. Herrmann served as secretary-treasurer of the International Labor Press of America, and four times he was elected president of the Union Printers' League of New Jersey. He was a founder and president of the Eastern Labor Press Conference.

For 49 years Mr. Herrmann has been a member of the International Typographical Union, and for 44 years he has served as a delegate to the conventions of the New Jersey State Federation of Labor.

He is a member of the State Federation's executive council and serves as AFL–CIO national representative of the International Typographical Union of North America.

On behalf, therefore, of his many, many friends and admirers I would like to wish for his, his lovely wife, and family a great abundance of good health and continued good service in the years ahead.

Conservation of Water Resources

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. JENSEN. Mr. Speaker, most of us realize that a major domestic problem confronting us as a nation today is the conservation of our precious natural water resources.

The Congress has recognized this situation and has established programs and provided money to try to solve it.

There is both Federal and State responsibility in planning of this magnitude. A constant awareness of the task is not only desirable, but necessary. Education through publicity will accomplish this.

To that end I should like at this point in the RECORD to insert a splendid editorial contributed to the January Monthly Reporter of the National Rivers and Harbors Congress by the Honorable PHIL WEAVER, of Nebraska, my esteemed colleague on the Committee on Appropriations.

The editorial follows:

CONSERVATION OF WATER RESOURCES

(By Hon. PHIL WEAVER, U.S. House of Representatives (Fifth, Nebraska), chairman, National Rivers and Harbors Congress Project Committee)

In the past half century the development of our greatest single natural resource, water, has been delayed and at times mismanaged at the national level because of two factors: (1) The lack of foresight to develop an orderly long-term program and, (2) the tendency by some to look upon this sort of development as political pork.

Those of us who have been deeply concerned with this major national problem have worked under a handicap because of this Topsy-like growth of a natural resource develoment program in the past. Because—in years past—there was no attempt at logical planning, the field of resource development at times was thrown open to political pressures.

Many interested in conservation and development of our water resources have long seen the need for an orderly development in this area. Their efforts in recent years have succeeding in bringing at least a degree of order. In the forefront of this fight has been the National Rivers and Harbors Congress with its wide basis of representation.

That congress, for instance, has evolved its projects committee to screen every new proposal, to determine its merits and, equally important, to determine where and how individual projects fit into the overall national picture. By this criterion alone the projects are assigned a priority. This approach has also been adopted in the House Committee on Appropriations' Public Works Subcommittee under the able chairmanship of Hon. CLARENCE CANNON, of Missouri. Last year, for instance, more than a thousaid witnesses appeared before the committee to testify on proposed projects, many of them long authorized but dormant for lack of funds.

After studying this mass of testimony, both from the Executive and from individuals and associations, the committee developed a program which looked to the future as has perhaps no other program in recent years. It was a conservative program, a forward-looking one, and in which the confidence of the people could easily rest. It was a lean and muscular program, one from which every ounce of fat had been trimmed. We may be assured that the same approach will be used again this year by the committee.

It is to be hoped that both political parties at their July conventions will adopt a platform plank dealing forthrightly and honestly with this very important problem. Such a program, carefully worked out and looking to the future, would go a long way toward confounding those who level an accusing finger at water resources development and call it pork.

Statement of John J. Corcoran, Director, the American Legion National Rehabilitation Commission, Before the Committee on Veterans' Affairs, House of Representatives, February 2, 1960, on H.R 9378

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following statement:

Mr. Chairman and members of the committee, we appreciate this opportunity to express the views of the American Legion on current proposals to modify the procedure for investing the national service life insurance trust fund and the U.S. Government life insurance trust fund.

We are pleased that the chairman has seen fit to reopen this subject by the introduction of the bill, H.R. 9378. This measure would amend sections 720 and 755 of title 38, United States Code, so as to provide for the investment of both the national service life insurance fund and the U.S. Government life insurance fund in obligations bearing current rates of interest, subject to a floor of 3 percent per annum for the NSLI trust fund and 3½ percent per annum for the USGLI trust fund.

The existing section 720(b) authorizes the Secretary of the Treasury to invest and reinvest the NSLI fund, or any part thereof, in interest-bearing obligations of the United States or in obligations guaranteed as to principal and interest by the United States, and to sell such obligations for the purposes of the fund. Under section 755(b), the Secretary of the Treasury is authorized to invest and reinvest the USGLI fund, or any part thereof, in interest-bearing obligations of the United States, or bonds of the Federal farm loan banks, and to sell such obligations and bonds for the purposes of the fund.

The rate of interest at which the respective funds are to be invested is left to the discretion of the Secretary of the Treasury.

Early in 1941, the Secretary, with the approval of the President, determined to have the investments of the NSLI fund in special series of Treasury obligations and bear interest at the rate of 3 percent. This rate was selected on the basis of the fact that the National Service Life Insurance Act requires that the premium rates for such insurance shall be the net rates based upon the American Experience Table of Mortality and interest at the rate of 3 percent per annum. In 1944, the President approved a recommendation of the Secretary that the special obligations issued to the USGLI fund bear interest at the rate of 3½ percent inasmuch as the controlling law specifies that the basis of the calculation of the reserves and all other values under the USGLI policies shall be the American Experience Table of Mortality and interest at 3½ percent.

Thus, since the years 1941 and 1944 respectively, these funds have been invested at 3 percent for the NSLI program and 3½ percent for the USGLI program. Currently, the NSLI fund is entirely invested in 5-year special 3-percent Treasury notes. The special obligations issued to the USGLI fund are in the form of 1-year, 3½-percent certificates of indebtedness.

It will be remembered that during the years when the market rates of interest were less than 3 percent, there was considerable criticism from certain circles that these fixed rates resulted in an unwarranted subsidy of the veterans' insurance trust funds by the taxpayers as a whole. In the period since the average rates of interest have been higher than 3 and 3½ percent, we note that these same voices have not come forward to complain that the trust funds are now subsidizing the public.

In effect, the chairman's bill, H.R. 9378, makes two important points which we are glad to endorse. First, by reason of its nature, any insurance trust fund must be administered in such manner as will guarantee its actuarial soundness. Secondly, public policy upholds the underlying concept of H.R. 9378; that the individuals concerned are entitled to a fair return on their investment.

We are particularly pleased that the bill would give statutory sanction to the floor of 3 and 3½ percent, respectively, for the interest rates applicable to investments of the NSLI and USGLI trust funds. The American Legion supports the judgment of the Treasury Department that Congress did not intend that the rates of interest for investment purposes should be less than the rates specified in the respective provisions of law for determining premium costs and for other purposes.

Also, it is our understanding that the Veterans Administration deems these rates of interest to be the safe minimums requisite to securing the actuarial soundness of the respective trust funds.

It is the American Legion's long-standing policy to support programs and procedures which will maintain the integrity of the NSLI and USGLI trust funds, and to oppose measures which may tend to jeopardize the integrity of such funds.

To insure compliance with this policy and in order that the organization's position with respect to the NSLI and USGLI programs will be in accord with sound insurance practices, all proposals for change in these programs are normally referred for consideration and recommendation to the American Legion Insurance Advisory Board. The wisdom of this practice has been demonstrated time and again inasmuch as the board is comprised of individuals who are experts in insurance matters.

We regret that our insurance advisory board has not had opportunity to consider the proposals under discussion here today. The board's annual meeting will not be held until the 27th and 28th of this month.

We have, however, consulted with Mr. Milo J. Warner, chairman of the insurance advisory board, and with Mr. Robert M. McCurdy, chairman of the national rehabilitation commission. Mr. Warner, a past national commander of the American Legion, is accompanying me today.

Specifically, we have discussed the provisions of H.R. 9378 and the proposal of the Treasury Department, recently reported in the Appendix of the CONGRESSIONAL RECORD advanced by representatives of the Secretary of the Treasury in their appearance before this committee earlier today.

In our opinion, the Treasury proposal has considerable merit. In essence, it would retain the historic interest rates of 3 percent for NSLI fund investments and 3½ percent for USGLI fund investments as a floor, but provide for reinvestment of such funds at interest rates approaching current market yields.

Under the recommended formula, as we understand it, the special obligations issued to the funds would bear interest at a rate one one-half of 1 percent lower than a rate equal to the average market yield (computed as of the end of the calendar month next preceding the date of issue and adjusted to the nearest multiple of one-eighth of 1 percent) borne by all marketable interest-bearing obligations of the United States then forming a part of the public debt that are not due or callable until after the expiration of 5 years from the end of such calendar month; provided that the special obligations issued to the USGLI fund shall be at rates not less than 3½ percent and the obligations issued to the NSLI fund shall be at rates not less than 3 percent.

The reduction of one-half of 1 percent below the current average interest rate would be in consideration of the guaranteed floor of 3 and 3½ percent for the respective funds.

We believe the principles inherent in this plan are fair to both the public and the veterans concerned. We are satisfied it would be acceptable to the individual NSLI and USGLI policyholders. Certainly, it should serve to help curb further criticisms should the average market rates of interest subsequently fall below 3½ or 3 percent.

The Treasury Department's plan for conversion to the recommended formula appears to be well-reasoned and in keeping with Veterans' Administration requirements relative to operation of the insurance programs.

On behalf of the American Legion, we respectfully urge the committee's careful consideration of the proposal to reinvest the veterans' insurance trust funds at a rate of interest one-half of 1 percent less than the current average market yields, subject to a minimum rate of 3 percent for the NSLI fund and 3½ percent for the USGLI fund.

Thank you for your interest in and attention to the views of the American Legion.

They'd Vote Red

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. BROCK. Mr. Speaker, there has always been a question in my mind, and in the minds of many conscientious Members of this body, as well as many millions of responsible American citizens and taxpayers, as to the values and benefits gained from the vast amount of more than $70 billion poured into foreign-aid projects.

On this tremendous expenditure over the years, we are now paying close to $3 billion in annual interest charges alone, notwithstanding the principal that has been added to the national debt.

Various investigations conducted in connection with these programs have uncovered senseless waste, negligence, and outright graft on the part of some of the participants charged with allocation and distribution of funds and materials in foreign countries.

To take a case in point, the South American country of Bolivia has been the recipient of $128 million since 1954, to bolster their sagging economy. Today, they are in far worse shape than when our foreign-aid program was launched in that country.

The February 1 issue of the Omaha World-Herald, a leading Nebraska daily newspaper, carried an editorial on the subject of foreign-aid waste and extravagance in the country of Laos, southeast Asia. The article is entitled, "They'd Vote Red." The content is the result of a thorough investigation and report by a United Nations investigative unit into the expenditure of $225 million of American foreign-aid funds poured into that country since 1955, and the results attained therefrom. I need not remind you that it is tragic and the report speaks for itself.

With the permission of my colleagues to extend my remarks and include the editorial of the World-Herald in the RECORD, I commend to your attention this able piece of reporting in the public interest:

THEY'D VOTE RED

A United Nations investigative unit looked into the spending of $225 million in U.S.

foreign aid in Laos since 1955, and agreed it has not so far achieved significant results.

Jim Lucas, able correspondent for the Scripps-Howard newspapers, has an even more grim report from the scene. He writes:

"If free elections were held today in Laos, every qualified observer, including the American Embassy, concedes this hermit kingdom of southeast Asia would go Communist in a landslide."

In other words, the aid program has been such a disastrous failure we Americans can be thankful only that the people there have no chance to speak their minds about it.

What a commentary that is, not only on foreign aid but on the United States as the champion of free representative government.

In 5 years, says Mr. Lucas, Uncle Sam has invested almost four times the gross national product of Laos. And for what?

In 1955 Laos had no roads and still has none. It had no national communications system. There is still none. Laos was desperate for elementary schools and had only one high school. Uncle Sam built none, but spent a half-million dollars to start a university.

Laos lacked hospitals. It has one native doctor and three dentists. With $225 million spent, the foreign aiders never got around to building a hospital. Dr. Tom Dooley, with his few thousands of dollars from private charity, has done far more for medicine in Laos than has Uncle Sam with all his millions.

To create political stability, the foreign-aid planners gave Laos a 29,000-man army which has yet to prove it can fight but whose politically minded commanders assertedly connive to bring down every civilian government they oppose.

Things are supposed to be better now that wastrels and crooks have been fired from the Lao foreign-aid staff. There is much talk about the new team. Mr. Lucas and other observers absolve the present aid dispensers from blame for the unholy mess which now exists.

Nevertheless, all agree there is a political vacuum in that key southeast Asian country and at least one American correspondent says that in a free choice today the people of Laos would choose communism. Here foreign aid has betrayed America's interest and the cause of freedom. Short of treason, it would sarcely be possible to return a stronger indictment.

House Concurrent Resolution 459

SPEECH
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. NORRELL. Mr. Speaker, on February 2, 1960, House Concurrent Resolution 459 passed the House. This measure expressed the sense of the Congress that any variation in the traditional interpretation of the treaties between the United States and the Republic of Panama shall be made only pursuant to treaty.

In order to clarify my position with reference to this resolution, I want to say that I was in favor of its passage. I was present in the House Chamber during the major portion of the debate, but unfortunately I was called away before the vote was taken. If I had been able to be on the floor at the time the rollcall was taken, I would have voted "yea."

Loyalty Oaths and Disclaimer Affidavits

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. SCHWENGEL. Mr. Speaker, most of the agitation about the loyalty oath and the disclaimer provision in the National Defense Education Act has come from legislators, educators, and school administrators.

The greatest beneficiaries of the act have had little opportunity to voice an opinion one way or another. In that regard, it is interesting to note a resolution adopted last month by the Senate of Associated Students of Westmar College, Le Mars, Iowa.

I take this opportunity to include a copy of that resolution in the RECORD so that the Members will know that some of the students have voiced an opinion with respect to these provisions. The resolution follows:

LOYALTY OATHS AND DISCLAIMER AFFIDAVITS

The Senate of the Associated Students of Westmar College notes with approval the position taken by the 12th National Student Congress of the U.S. National Student Association and also the position taken by the National Executive Committee of USNSA in regard to loyalty oaths and disclaimer affidavits.

The Senate disapproves of loyalty oaths and disclaimer affidavits due to its belief in the following principles:

1. Loyalty is based upon ideals and cannot be legislated or created by slogans.

2. That, historically, loyalty oaths and disclaimer affidavits have been a source of much abuse.

3. That they do not serve their purpose. No subversive would have any qualms about taking a loyalty oath or signing a disclaimer affidavit. On the other hand, loyal Americans who refuse to sign on principle are singled out.

4. They are a threat to academic freedom, for:

(a) There is a danger that they will lead to more restrictive legislation;

(b) There is danger that their meaning may be expanded through interpretation;

(c) They imply that a student and/or faculty member is disloyal until he makes a positive statement expressing his loyalty. The requirement does not indicate a belief in the basic loyalty of American college students and/or faculty members;

(d) A student or faculty member's refusal to sign because of principle results in suspicion of disloyalty.

5. They often discriminate against college students or faculty members. In the instance of loyalty oaths and disclaimer affidavits required under the provisions of the National Defense Education Act of 1958 college students are required to take the oaths whereas recipients of Federal aid under other programs (e.g., farmers) do not have to take oaths or sign disclaimer affidavits.

The Senate is particularly concerned with section 1001(f) of the National Defense Education Act of 1958 which requires loyalty oaths and disclaimer affidavits for student loans. The Senate strongly urges repeal of section 1001(f) of the act eliminating both the loyalty oath and the disclaimer affidavit. Movements to repeal the loyalty oath that are now under way are encouraging but it is of utmost importance that the disclaimer affidavit provision be repealed also.

While the Senate feels it impractical for Westmar College to discontinue participation in the NDEA program in protest of section 1001(f) it notes with approval the position which the administration and the faculty of the college have taken against section 1001(f) as a result of the college's participation in the American Association of American Colleges.

The Senate mandates that copies of this resolution be sent to Members of the U.S. Congress from Iowa, to the Faculty Senate and to the national affairs vice president of the U.S. National Student Association.

The Senate recognizes the assistance of information obtained from USNSA in the preparation of this resolution.

The Southern Parents's Viewpoint on Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. HERLONG. Mr. Speaker, I have from Mrs. Joseph L. Dicks of Ormond Beach, Fla., a communication addressed to the Congress of the United States, in which she has earnestly and ably presented a plea to each Member of Congress for understanding of the southern parent's viewpoint on the so-called civil rights question.

In order that every Member of Congress may have an opportunity to read this communication, I ask consent that it be printed in the Appendix of the RECORD.

The communication follows:

To the Congress of the United States:

Proposed legislation, bearing the misnomer "civil rights," is now, or may soon be, before you. It is not to my own representatives I write concerning this legislation, for they are well aware of those things of which I speak, but it is to those Members of your body of whom I am not a constituent that I address these words, since the action you take on this proposed legislation probably affects me more than those constituents who elected you. Perhaps I am naive in doing so, but it seems incomprehensible that a Congress which has specifically granted control of public schools to some States, would, for a temporary political advantage, withdraw this privilege from the States of the South because of hate propaganda aimed at destroying public education in those States, as well as the peace and tranquillity of the people who live in them.

If you have been led to believe that resistance to integrated public schools in the South consists of a few leaders and extremists, and that parents will eventually accept such schools, you have been misinformed. These parents believe they have the constitutional right to guide their children in all matters concerning religion, education, and association, and in so doing, insist that their children be educated in a decent, wholesome atmosphere, free from sociological pressure, or the need for police protection. In exercising these rights concerning their children, they feel they deprive no citizen, of any race, color, or creed of the enjoyment of any citizenship rights to which they are entitled. The low moral and scholastic level of integrated public schools is well known to you, for you operate such schools in the District of Columbia. Your own record of the crime, disease, and low educational standard of these schools shows them to be a national disgrace.

Some of you Congressmen have recently made tours of Russia, but have you made tours of inspection of the South's public schools, both white and Negro, which you are now being asked to destroy? Do you know how many privately endowed white schools were absorbed into the public school systems of some States in order to educate southern children? And do you also know that in the schools of most southern communities Negroes furnish a large proportion of the pupils in the public schools while paying only a minute part of the school tax?

The southern white population has long been cognizant of the Negro's exhibited lack of initiative and ability, despite opportunities. Out of christian love and compassion it has largely fed, clothed, and educated the Negro in its midst, hoping that in time these people might eventually assume their responsibilities as citizens in a free society. Southern white parents, however, have also been cognizant of the Negro's moral characteristics and living habits, and they have no intention of allowing their children to be used as sacrificial offerings for purposes of social experimentation, whether in the name of brotherhood or civil rights. Should compliance with the Supreme Court's mandate be insisted upon, either by court orders or civil rights legislation, the public schools of the South will eventually be abandoned entirely, or else again reduced to the level of those free institutions of a few generations ago, patronized only by the shiftless and the indigent.

The continued exploitation of the race issue as a means of exacting some kind of retribution for the "sins of the South" is fast becoming intolerable. It would seem that during the course of nearly a hundred years the American people could have learned that the South not only did not invent slavery but that slavery was a lucrative business plied by the slave traders of the North, and would cease to be the gullible victims of racial propagandists. If the South ever owed a debt to the Negro, which I doubt, that debt has long been paid in full. If any injustice has been done the Negro people, it has not been done by the white citizens among whom they have freely chosen to live for nearly a century. It was perpetrated by the Federal Government, when, for ulterior motives, and by illegal action, it bestowed upon them American citizenship, without first teaching them the duties and obligations imposed by that citizenship.

The cry for the Negro's equal opportunity is constantly heard through every avenue of communication. The many tax-free foundations and pressure groups, with their unlimited wealth, have seen to that. But have you Congressmen ever looked behind this smoke screen? Are you sure it is equal opportunity that is wanted, and not the fruits which others through equal opportunity have industriously acquired?

That you would have us, who reside in the South, believe the Constitution demands the surrender of public schools to a minority group which assumes little responsibility for their cost while sharing bountifully in their benefits, thereby denying a voice to those who built those schools and support them, is, indeed, to presume that we are as ignorant and provincial as our critics say of us. We are well aware that the hue and cry for "civil rights" is not a Constitutional matter, but a political maneuver, whereby it is proposed to sacrifice our children to procure votes for you and your political parties.

Despite the label of "anarchists," the South's pattern of resistance to school integration in the past has been that lawful resistance prophesied by our early patriots should there be a usurpation of powers by any branch of the Federal Government. There has been a "disquietude of the people," a "refusal to cooperate with the officers of the Union," the "frowns of the executive magistracy" of the States, as well as the "embarrassments created by legislative devices" in order to evade the consequences of such usurpation. I earnestly entreat each of you to put aside selfish motives in considering the grave proposals which may now come before you, lest those more drastic acts of resistance described by these men be brought about by oppressive civil rights legislation.

Surely, I need not echo the further words of our Nation's founders and ask "But what degree of madness" would ever drive you "to such an extremity."

Mrs. WESLEY O'NEALL DICKS,
Parent, Ormond Beach, Fla.

Running Against the Tide

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. MUMMA. Mr. Speaker, two separate newspaper articles happened to come across my desk at the same time which I feel are pertinent right now. They advise how we might save on the one hand, the cost to finance the huge national debt with a computation for Lebanon County, Pa., which is in my district, and the debt-free situation we strive for as exemplified by the community of Paxtang that is also in my congressional district. We might take a lesson from the people in Paxtang who can boast of being free of debt. They are on a pay-as-you-go program. There is no mortgage on the unborn of that community.

The two newspaper articles follow:

[From the Harrisburg (Pa.) Evening News, Jan. 27, 1960]

PAY-AS-YOU-GO PROGRAMS KEEP PAXTANG FREE OF DEBT

(By Jerry Fitzpatrick)

Paxtang, a community of 2,000, is conservative, has low taxes and, rare as an unmortgaged split-level house, is free of debt.

Municipal and school district leaders cheerfully boast there isn't another community in the 2 dozen in Greater Harrisburg that can claim to be debt free.

The reason: "We've always been conservative here," say William A. Foreman and William S. Sanford, borough and school board secretary respectively.

"We never permitted our community facilities to lag. We operate on a 'pay-as-you-go' program, using good housekeeping."

The borough is out of debt to all intents and purposes. It has $14,000 in sewer bonds to pay off, but has sufficient money in the sewer sinking fund to cover the debt.

"We would pay that off now," Foreman states, "only we don't have the right of prepayment."

The 30-year bonds expire December 1, 1961. The sinking fund had $13,662.91 at the end of 1959, plus unfigured interest from bank savings. Another $900 will be appropriated to the fund from the budget at the end of this year.

The loan costs the borough $665 interest per year, at 4¼ percent.

The borough was one of the first suburban communities to get sewers, again illustrating the official conservative approach, claims Foreman.

The school district has had no indebtedness for about 10 years, Sanford points out. The second floor of the elementary school was renovated at that time.

True, the district is under rental agreement to the Central Dauphin Joint Schools Authority, but that is a function and a debt of the jointure and not the individual district.

There is little likelihood that the borough will get into debt in the foreseeable future.

Its streets are all paved, all have been resurfaced in recent years, are curbed, and are "in excellent condition." The borough has an active street improvement program.

The municipal building, erected in 1932, also is in good shape. Bonds on it were paid off last year.

The elementary school is old, but is in as good condition as any modern school and has met all State inspections, Sanford says. Four years ago the district spent $17,000—without going into debt—for modernizing the classrooms.

Taxes, as a result of the conservatism, are low. Borough taxes have remained at 18 mills for a decade. There is a 1-percent real estate transfer tax.

School district taxes are 56 mills, where they have remained since 1955. There also are $10 residence and $5 per capita taxes.

The residence and the transfer taxes are the only two enacted by the borough under the limitless "tax anything" law.

Despite low taxes, the "local effort" in school support is high compared to most communities because of high property valuation, Sanford relates.

Taxable assessed valuation is $2.4 million for the small community. The valuation includes the giant structures of the State headquarters for Nationwide Insurance Companies and the Pennsylvania Farm Bureau Cooperative.

This has resulted in one of the lowest reimbursement ratios in the State from the Department of Public Instruction, the two men claim. In 1955 the ratio was the lowest in the State.

Apparently people find paying taxes in Paxtang a real joy.

Foreman, who had been school board secretary until 2 years ago, and Sanford related that "it is astounding, but each year we collect 99.9 percent of our realty taxes."

Most communities "consider themselves happy if they have only 10 percent outstanding by the end of the penalty period," they say.

Ninety percent of Paxtang's taxes comes in during the discount period.

Out of last year's school tax yield of $85,692.60, for example, only $14.40 is outstanding.

Paxtang, the two officers agree, "is a phenomenon."

[From the Lebanon (Pa.) Daily News, Jan. 28, 1960]

COSTS OF NATIONAL DEBT HIGH IN COUNTY

NEW YORK, January 28.—What price national debt? How much is it costing residents of Lebanon County in taxes each year to pay their portion of the interest charges alone on the debt?

From calculations made by the Tax Foundation, which keeps an eye on taxes and spending at all levels of government, the current interest charges average $51.48 per person for the entire population of the country.

It is nearly $1 a week, every week in the year for every inhabitant.

For Lebanon County residents, applying the average interest costs locally, it adds up to $4,556,000 a year.

The rate will go up in the next fiscal year to a new high of $53.71 per person. This

was indicated recently by President Eisenhower when he told Congress that the interest charges on the national debt, which were $8.1 billion a year ago, are now approaching $9.5 billion.

This rise of $1.4 billion, translated into more understandable terms, amounts to an increase in interest costs of $7.81 a year per person.

The Tax Foundation notes that, next to Defense Department expenditures, payments for interest on the debt will be the biggest costs to be met in the next fiscal year. They will exceed by far the outlays for veterans and for agriculture.

At the present time, the national debt stands at $291 billion, which is nearly $1,650 for every man, woman and child in the country.

If the residents of Lebanon County were to pay off their share of this obligation they would need the tidy sum of $146,025,000.

A glimmer of hope is seen in the President's announcement of a possible $4.2 billion budget surplus in fiscal 1961. If it is achieved, he said, it should be applied to reducing the debt.

A quick calculation shows that a reduction of this size would cut Lebanon County's portion of the debt by $2,190,000. Local interest costs would drop proportionately.

Some idea of how huge an amount is the $291 billion that represents the national debt comes from the Federal Home Loan Bank Board. It points out that it is equal to the combined savings of the American people—in the form of savings accounts, life insurance and Government bonds.

Aberdeen, S. Dak., Indian Health Program

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues to the generous efforts of a group of Federal employees in the Aberdeen, S. Dak., Area Office of the Division of Indian Health in forming the Indian Health Employees Scholarship Fund which has made it possible for qualified students of Indian descent to obtain training in a health field.

The program was begun in September 1958 through the suggestion of Dr. J. H. Gerber, medical officer in charge when he learned insufficient funds were available for Indian students desirous of continuing their education in health programs beyond the high school level.

Gerber suggested that the employees in the Aberdeen Area Indian health program participate on a voluntary basis. Books containing 50-cent donation coupons were distributed to all employees in the area. At the end of the drive in December 1958 a total of $1,567.85 had been collected. In 1959, the total receipts were almost double that amount as a result of the employees donating their time, money, and energy in sponsoring several dances, bingo parties, and other fundraising activities throughout the area.

This operation is indeed unique among Federal employees and is indicative of their sincere interest in improving health conditions among the Indian people of South Dakota, as well as providing educational opportunities for them. I feel they should be commended for their efforts.

Payment-in-Kind Farm Legislation

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. SCHWENGEL. Mr. Speaker, this week it was my privilege and duty, as I saw it, to join with several of my Iowa colleagues in introducing payment-in-kind legislation to deal with the corn-surplus problem.

We feel that this forthright approach is the only way to cope with a full-blown dilemma which vitally affects the midwest economy. We see it as a three-pronged attack upon the problem. The legislation, when adopted, will (1) reduce current supplies of corn along with the staggering storage and handling charges thereon; (2) reduce current production of corn, and (3) establish an adequate reserve of corn in case of an emergency.

We trust that hearings can be held on this legislation so that a bill can come before Congress this session and put this plan into operation.

Payment-in-kind legislation has been proposed over the past several years. In the district I represent, two men have given a lot of thought to the problem—Dave Livingston of Washington, Iowa, and Frank Summers, of Milton, Iowa—both of them have circulated their plans quite freely.

This week I received a letter from Frank Summers calling my attention to his activities in promoting this type of approach over the past 4 years. He has printed a digest of these activities, and under leave to revise and extend my remarks, I request that this digest appear in the Appendix of the RECORD so that due credit will come to Mr. Summers:

SOLVE THE FARM PROBLEM THIS YEAR 1960

(By Frank Summers)

Preface: This is a partial digest of Mr. Summers' prior printed documents, dated December 5, 1955; January 27, 1956; February 13, 1956; February 3, 1958, and February 17, 1959, all of which suggested the issue of negotiable warehouse certificates to farmers and/or stockmen (hereinafter referred to as farmer or farmers) for taking far more cropland out of production, in order to solve the problem of the burdensome surplus of corn, wheat, cotton and the like.

It is well settled that the major farm problem is to greatly reduce the increasing large surplus of agriculture commodities, so that they will not cast a very bearish influence on the markets, thus bearing prices down and down far below parity.

Following is a brief digest of said documents as to the increasing large surplus of corn and wheat.

If the productivity of the farmer's cornland would average about 60 bushels per acre, our Government could issue said farmer a negotiable warehouse certificate for 60 bushels per acre, for the additional cornland thus taken out of his allotted or base acres for this year 1960.

Likewise with wheat if the productivity of the farmer's wheatland would average about 20 bushels per acre, our Government could issue said farmer a negotiable warehouse certificate for 20 bushels per acre of the wheatland thus taken out of his allotted, base or growing wheat acres for this year 1960.

The farmer if he desired and it was practical could exchange said certificate for the actual corn and/or wheat direct from the CCC storage or warehouse.

Or if the farmer desired he could sell his certificate, at or near the market price, to another farmer, who then could exchange said certificate for the actual corn and/or wheat from CCC storage or elevator, if practicable.

Or if the farmer desired he could sell his certificate, at or near the market price, to his local dealer or elevator, who then in turn could pool said certificates thus purchased from a plurality of farmers, said dealer then could sell said certificates to his terminal grain dealer, elevator, or processor, just the same as if the actual corn and/or wheat had been handled.

By said plan the corn and/or wheat would end up mainly in the terminal grain dealer's elevator or processor, just the same as if the farmer had grown and sold the actual corn and/or wheat this year 1960, thus in many instances the grain would not be moved from the CCC storage or elevator in said sales.

As an illustrative example, if negotiable certificates were issued for, say, 400 million bushels of stored CCC corn, based on an average of 60 bushels per acre, this would take about 6,600,000 acres of average corn land out of production for this crop year 1960. This would decrease the combined corn crop and the CCC surplus corn for the 1960 crop year in the neighborhood of 800 million bushels.

Another illustrative example is, if negotiable certificates were issued for, say, 300 million bushels of stored CCC wheat based in an average of 20 bushels per acre, this would take about 15 million acres of average growing wheat out of production for this year 1960. In this instance it would be necessary for the farmers to clip, plow under, or disk the wheat before it matured into grain, in order to earn said certificates for this crop year 1960. This would decrease the combined wheat crop and the CCC surplus wheat in the neighborhood of 600 million bushels for this year 1960.

In order for the wheat farmers to qualify this year, 1960, for said certificates, it would be preferable for them to clip or disk effectively the growing wheat on the acres thus taken out of production, the wheat straw should be left laying on the ground, which would add organic matter and fertilizer to the land, and also tend to prevent erosion by wind and water.

Above illustrations and examples also applies likewise to cotton, peanuts, grain sorghums, tobacco, and the like, if said suggested plan was enacted into law, and properly administered, it would act as an automatic valve tending to keep production in line with demand, which would tend to raise farm prices or income up to par, or on a level with other classes of our economy.

It is submitted that said plan is the cheapest and the most effective way to solve the enormous increasing amount of the farm surpluses of corn, wheat, cotton, and the like, as it would not take any cash outlay by our Government, as the surplus stocks are already paid for, and further said stocks are fast deteriorating and it is costing our

Government over a million dollars a day for storage and expenses to keep said surpluses.

The quicker the farm problem is generally solved, the cheaper and easier it can be done, surely eventually it will have to be solved in the above manner, so why not this year 1960?

Probably over a million farm families have been and are being forced to sell their farm equipment and the like and leave the farm, because of the relatively fast decline in general prices of agriculture products. Which is throwing many million pieces of second-hand farm machinery on the market, and is being bought at relatively low prices by implement dealers and remaining farmers. Thus this is virtually stopping the sale of many million pieces of new farm machinery, such as tractors, combines, trucks, corn pickers, and the like.

It is apparent the majority of farmers in general want the farm problem solved this year 1960. Some people have stated that the increasing population might use up the surplus crops a decade or 10 years in the future. Such a possible solving the enormous surplus is absurd or ridiculous to several million farm families now living on the farm trying to have a home, and to make enough money for the necessities of health and life, and to educate their children and the like. Solving the surplus farm problem a decade or 10 years in the future, would be of no benefit whatever, to several million people living on the farms now. Even if the farm problem would be solved next year 1961, it would be far too late for many thousands of farm families.

Said plan would operate with, or in addition to price supports, the two-price system, production payments (the Brannan plan) and voluntary or legislated controls and the like.

It appears to be well settled that about 40 percent of the people of the United States, depend directly or indirectly, for their livelihood on agriculture.

Piecemeal legislation has not, and will not, solve the farm problems, but only prolong and increase them.

Said plan could be effectively and economically administered through the many ASC offices throughout the United States.

It will surely take a far greater period of prosperity (or so-called inflation) for all classes of our economy, if the enormous Federal debts are ever paid or even substantially reduced, especially in view of the constant threat of an atomic war hanging over our heads, with its terrific increasing military cost, in order to provide for the safety and security of our great Nation.

It follows, a bipartisan plea is most earnestly requested of our administration and Congress, to solve the farm problem this year 1960 on behalf of many millions of people who are depending directly and indirectly on agriculture, for their livelihood, and thus in general alleviate or stop the fast increasing hardships and/or insolvency of several million people.

The U.S. Flag in the Panama Canal Zone

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mrs. Helen P. Lasell, national chairman, the U.S. Flag Committee, Jackson Heights, Long Island, N.Y., regarding the U.S. flag in the Panama Canal Zone. Mrs. Lasell's letter is dated January 23, 1960:

THE U.S. FLAG COMMITTEE,
January 23, 1960.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: We write to thank you for your splendid work regarding our flag in the Panama Canal Zone. We wonder where the other Congressmen are, that more do not speak up, as you did?

Why are not our troops ordered to guard our flag and our rights there—just as they were ordered to take over Little Rock, to protect a few children attending the public schools?

We consider this just one more illustration of the sellout which has been going on, in Washington, for a number of years. Instead of being the strongest country, we are rapidly becoming the weakest, because any country is strong or weak, according to the people in it. Those in power today are not so concerned with protecting American citizens as they are to bringing about one world federation. And the prospects for 1960 are no better.

Sincerely,

THE U.S. FLAG COMMITTEE,
HELEN P. LASELL, *Chairman.*

Baring Reveals Use of False Technical Data in Third Street Highway Selection

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter I addressed to the Secretary of Commerce on January 27, 1960, in which I showed conclusively that the Bureau of Public Roads did falsify pertinent technical information in presenting its side of the picture to the John Blatnik committee investigating the selection of the routing of the Interstate Freeway System from the California State line through Reno and Sparks to Vista, Nev. As you know, the estimated cost of completing the Interstate Highway System pursuant to the Federal-Aid Highway Act of 1956 and 1958 has now reached the gigantic figure of $39.8 billion. Since it is apparent that urban planning of the system is based on falsification of technical fact, the situation today should be of vital concern to every Member of Congress. The letter follows:

JANUARY 27, 1960.

Mr. FREDERICK H. MUELLER,
Secretary of Commerce,
Commerce Building,
Washington, D.C.

DEAR MR. SECRETARY: On September 22, 1959, Mr. Robert E. Merriam, Deputy Assistant to the President, wrote to me outlining certain developments relating to the Interstate Highway System routes in the Reno, Nev., area. A copy of this letter is attached hereto. In that letter he concludes that the routing question in the Reno-Sparks area had received full and adequate consideration by the local and by the State authorities concerned, and that their findings and recommendations were after proper evaluation approved by the Bureau of Public Roads. I must take exception to the information furnished Mr. Merriam upon inquiry.

Let me here point out that charges of influence by the Bureau of Public Roads were not cleared by investigations of the John A. Blatnik Special Subcommittee hearing held in Reno on February 24, 25, and 26, 1959, but only confirmed.

The Blatnik subcommittee, page 17 of its report, did attach no sinister motives to the action of the Bureau in the above regard. (Approval of line J by the State of Nevada, the approval acquiesced in on February 21, 1957 by the Bureau of Public Roads, all in advance of public hearings, and dispatch of telegrams by the Bureau of Public Roads which contained statements obviously designed to influence action that accorded with earlier State and Bureau of Public Roads approval of line J.)

A part of this action to which the Blatnik Subcommittee did "attach no sinister motives" is so obviously illegal in the light of Title 23, United States Code, Highways, Section 128, and so clearly in conflict with the spirit of the Bill of Rights of the Constitution of the United States, that a paragraph from the Blatnik Report, page 17, is here quoted in its entirety:

"The statements contained in the telegrams addressed to the Washoe County Board of Commissioners from officials of the Bureau of Public Roads were obviously designed to influence action that accorded with earlier State and Bureau of Public Roads approval of line J. Certainly, a local body faced with a telegram that line J is the 'only location acceptable for the expenditure of Federal interstate funds' has little room for deliberation. It might also be noted that the Washoe County Board had earlier approved the route, prior to holding public hearings."

Again referring to Mr. Merriam's letter of September 22, 1959, I should like here to quote for your convenient reference the next to the last paragraph:

"While there does not appear to be any evidence justifying further consideration of this matter, I can assure you that if the State of Nevada and the city of Reno wishes to reconsider their recommendations, that the Department of Commerce, through the Bureau of Public Roads, will be willing to review any new factual information or competent engineering data pertinent to the establishment of the Interstate route in the Reno-Sparks area."

It is quite inconceivable that the Bureau of Public Roads would be requested to review any new factual information or competent engineering data pertinent to the establishment of the Interstate route in the Reno-Sparks area submitted to it by the Nevada State Highway Department, since it is that department, through its consultants, that is responsible for the transmission of so-called technical data in support of the route through the city of Reno.

The State Highway Department, and in turn the Bureau of Public Roads, shows a highly technical line or argument to support the Third Street program. Essentially, both the State Highway Department and the Bureau of Public Roads pretended to sympathize with the people of Reno in their need for a useful and desirable route from the local viewpoint and pretended to protect the interest of the United States by choice of an economical route, volume of traffic, use and service considered, while at the same time the Bureau was insisting upon the destructive and expensive Third Street route. The Bureau of Public Roads sustained this pretense by choosing to use the professional

engineering concept of benefit-cost ratio in an effort to prove its position.

Benefit-cost ratio is a measure of the economic value of a proposal which is determined by dividing the public benefit to be expected from the proposal by the cost of the proposal, if reduced to the same time period. The resultant figure is a numerical ratio—the benefit-cost ratio.

The people of Reno have not had the advantage of highly trained traffic and highway engineers on their side. All the qualified engineers were on the side of the Bureau of Public Roads, the State highway department, the county and city governments involved. The Blatnik subcommittee noted this unbalance of technical support and stated in its House Report No. 292 covering the Reno hearings, report dated April 23, 1959, that "In matters requiring technical knowledge, great reliance is placed on expert opinion." From kindergarten on into our adult life we are trained to be guided by the voice of technical knowledge and authority. However, the voice of expert opinion at the Reno hearing was an uncertain trumpet.

The Bureau of Public Roads testimony that the benefit-cost ratio of the Third Street Route would be 4.6 is false by its own data. The benefit-cost ratio concept chosen in this instance, as an instrument of deception to the people of Nevada and to the Congress of the United States, is remote from the experience of most people. It is so remote that the Chief Engineer of the U.S. Bureau of Public Roads spent considerable time at the hearing describing what the benefit-cost ratio means.

The Blatnik subcommittee report gives this explanation on the bottom half of its page 10. With this explanation, and on the same page, various high benefit-cost ratios for each of the discussed alternate routes through Reno ranging from 4.6 to 7.0 were given, with the single exception of the Rim Route asked by the people. This Rim Route received a benefit-cost ratio of only 1.1 which, according to the second table on page 10 of the Blatnik subcommittee report, is admittedly a Bureau of Public Roads estimate.

Here the ingenuity of the deception practiced by the Bureau of Public Roads at the Blatnik hearing becomes apparent, when it is understood that investigation of the 1.1 Rim Route benefit-cost ratio reveals the figure is too nearly correct to warrant comment. Only when the 4.6 Third Street benefit-cost ratio figure is examined does the enormity of the deception on the part of the Bureau of Public Roads become evident. The Bureau's own supplied figures and estimated data presented to the Blatnik subcommittee revealed that the 4.6 benefit-cost ratio for the Third Street Route can be achieved only by using the absurdly high driving cost figure of 18.8 cents per mile for the present streets and present Highway Route 40. This statement has been checked and rechecked by competent engineers, some calculating independently of others.

The Bureau of Public Roads further impairs its integrity. This 18.8 cents exaggerated present operating cost figure will not give a 1.1 benefit-cost ratio for the Rim Route. One has to use a present operating cost figure about 5 cents lower per mile on the present streets to achieve a 1.1 benefit-cost ratio for the Rim Route. Any exaggeration of a present operating cost exaggerates the benefit to be expected from a proposed program.

The absurdity of alleging a 4.6 benefit-cost ratio for an urban Third Street route is further revealed by noting in the Detroit Metropolitan Area Traffic Study, part II, 1956, pages 101, 119, 131, 132, and 133, that an urban expressway has to carry about 50,000 vehicles per day to achieve even a 1.0 benefit-cost ratio. This is a situation in which the benefit only matches the cost.

Further inspection of the same pages shows that an urban expressway has to carry over 130,000 vehicles per day by 1975 to achieve a 3.4 benefit-cost ratio. Reno has possibly a somewhat lower freeway construction cost than more urban Detroit, and Reno's freeway is proposed to be less capacious. These factors would somewhat reduce the 130,000 traffic volume needed to provide the 3.4 benefit-cost ratio in Detroit. These same factors, however, would not reduce the needed traffic volume to a figure anywhere near as low as 16,400 vehicles per day given by the bureau of public roads for the Third Street route.

The 4.6 benefit-cost ratio is simply a false assumption that the benefit of the Third Street route would amount to 4.6 times its cost. The trick of inflating the benefit-cost ratio to push a proposal beyond its merit is old. This evil practice is revealed by the following quotation from the same Detroit Metropolitan Area Traffic Study, part II, page 118:

"The measures illustrated on map 30 were summed for the entire network and show that the benefits accruing to drivers actually assigned to expressways are 10 percent greater than the construction cost of the network. This 1.10 ratio of benefits to costs may seem low by comparison with many traffic reports issued in other places proposing to make such measurements."

Along with the theoretical economic desirability of an expressway proposal must be considered the esthetic, neighborhood, commercial and human factors involved. Cities are for people, not for abstract structures which do not attract people. The essence of Reno is the concentration of its attractions which can be reached, one from the other, by walking. The introduction of a structure to cut downtown Reno in two clearly reduces the attractiveness of the city to its citizens and to its visitors. This is true no matter how good the structure may be for vehicles. The proper determination of this route can be made only if factual technical and economic data are objectively considered.

To the extent that any charges alleging false technical data before the various deliberative bodies concerning an expressway route through Reno during the periods of deliberation remain unrefuted, confidence in the wisdom of their judgments is unjustified through possibly no fault of the members of such bodies.

The determinations of public bodies and constituted authorities are no more reliable than the information or opinions upon which they are based, and the best information can be useful only to the extent that it receives attention and objective evaluation. No valid determination of the best route location or method or traffic flow improvement for the Reno area has in fact yet been made. As a matter of fact, an objective and comprehensive study of tarffic improvement, social and economic impacts and community betterment has to date only been authorized by the Bureau of Public Roads for the city of Boston. What is authorized for one city is justified for every city.

Now that the facts concerning the false information about the Reno highway situation, as furnished the Blatnik subcommittee by the Bureau of Public Roads, have become known, the constituted authorities should not attempt to push ahead construction plans on any part of the California State line—Sparks freeway proposal, until true factual data can be properly evaluated and considered. Any such attempt to proceed hastily at this time must be carefully scrutinized and could be viewed as collusive action with the Bureau of Public Roads in its effort to accomplish a route selection through the use of false technical data.

I have accordingly introduced a bill in Congress—H.R. 9802, a bill to prohibit the Secretary of Commerce from approving plans, specifications, and estimates for a specified portion of a route on the Interstate System in Nevada, and to prohibit further obligation or expenditure of Federal funds in connection with such such route. A copy of this bill is attached for your convenient reference.

The false technical prestige of the Bureau of Public Roads won the day with the Blatnik subcommittee and prepared the way for the uninformed and frequent attacks which have since been launched against me for my interest in the Reno highway situation. These attacks are false because their technical bases are false.

On October 22, 1959, in a document dated October 16, 1959, which is since the Blatnik hearings, I revealed the method by which the Bureau of Public Roads falsified the cost of operation on the present streets and on Highway Route 40 in Reno. This document had a large distribution. A copy was mailed to you. It is interesting to note that to date, it has been accepted without objection.

The issue at stake is much bigger than Reno; it is vastly bigger than Nevada; it is as big as the future of the United States of America. We investigate television and radio programs. While the President of the United States wonders how "the television industry could want to do these things to us," in matters of entertainment with only hundreds of thousands of dollars involved, the Bureau of Public Roads and some of the cooperating roadbuilding authorities and interests are deceiving us in matters of reality with millions of dollars involved in Reno and with billions of dollars involved throughout the United States.

The public must be given correct factual information on all matters of public consideration and correct factual information must be presented to our deliberative bodies by constituted authorities and their consultants. It is imperative that we improve the moral fiber at both public and private levels.

I am today writing this same letter to Mr. Merriam, with copy to Congressman JOHN A. BLATNIK. I feel certain that when Mr. BLATNIK learns through unrefuted charges that the Bureau of Public Roads has presented false technical information to his committee at the Reno hearings, his committee will wish to reexamine its attachment of "no sinister motives" to the action of the Bureau of Public Roads in the above regard.

I urge, Mr. Secretary, that you take immediate steps to put into effect the provisions of my bill H.R. 9802. I further urge that the approval of the Third Street Route through Reno and of line J from the State line to Lawtons be rescinded, as they were based on false technical facts, and the processes of locating a new route from the California State line to Vista, Nev., be immediately inaugurated, with the intent of securing the most economical system and at the same time meeting the objectives of the Interstate System.

I sincerely hope you will lend your fullest cooperation to the accomplishment of this end.

Respectfully,

WALTER S. BARING,
Congressman for Nevada.

Contributions of Dr. David McGregor Cheney

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend

my remarks and include therein a very fine article about the distinguished author, intellectual, and professor, my friend, Dr. David McGregor Cheney of Clinton, Mass., who has recently been elected a fellow of the International Institute of Arts and Letters, one of the highest honors which can be conferred upon a writer.

The ably written article from the Clinton Daily Item contains a very interesting summary of Dr. Cheney's contributions. There can be no question but that Dr. Cheney is one of the outstanding thinkers of our times. Dr. Cheney has won many honors in academic and literary circles. It would not be possible for me to do justice to the broad range of his intellectual interests and the significant work he has done in many fields. His well-trained, richly stored mind is a relevation to those who know him or his works. There is hardly a field of human learning to which he has not given assiduous, painstaking attention.

Perhaps his outstanding work is his "Index to Knowledge," a multivolume, new-type dictionary which applies modern scientific principles and meticulous research to the definitions and elaboration of the meaning of words. This monumental work has taken Dr. Cheney over 50 years to complete and it is now ready for publication.

Suprisingly enough, notwithstanding its magnificent scholarship, careful preparation and modern format, Dr. Cheny has been having difficulty getting it published principally because of the very high estimated costs incident to printing the several volumes which the work embraces.

Since it is something more than a dictionary and more useful than an encyclopedia, it obviously would have great value, not only in schools, colleges and educational institutions, but also in common usage. It is the kind of work that is vitally needed to facilitate general and specialized learning in educational institutions and by the public. It would be truly invaluable, and it should have been published long ago. Because of the cost and other factors involved and the size and magnitude of the work, private publishing concerns have not as yet undertaken it. However, it is to be hoped that, if it is not published by private interests, that some of the foundations, or even some of our Government agencies, would be willing to undertake to publish it at an early date.

I have been giving considerable time and attention to the matter of expediting publication of this great work and I hope that before long some affirmative results can be achieved so that the students and the people of this and future generations can be assured of having the benefit of this tremendously vital and significant intellectual project of Dr. Cheney's which should, if generally adopted, revolutionize education and learning in this country and exert beneficent influence in intellectual fields for many generations to come.

I take pleasure in heartily congratulating my valued friend, Dr. Cheney, and his gracious wife and helpmate, Gratia, upon this new award and richly deserved honor bestowed by the famous institute and wish for them continued success and happiness in all their endeavors, and in their personal lives, which have produced such great benefits to the intellectual world and to the Nation.

The article follows:

DR. CHENEY HONORED BY LITERARY SOCIETY

Dr. David M. Cheney, of 130 Prescott Street, Clinton, author and lexicographer, has been elected a fellow of the International Institute of Arts and Letters, one of the highest honors a writer can receive.

The election of Dr. Cheney adds to his other letters, the honorary, international degree of F.I.A.L. and makes him the 68th of the new group elected during the past year.

CONSTITUTION

The institute by its constitution elects only 760 fellows throughout the world, and to receive this honor, a vacancy must occur. Following World War II, many such vacancies had remained unfilled, and the society has been electing fellows throughout 1959.

Among those so honored have been college presidents, heads of departments at the universities, leaders in the fields of art, literature, science, music, the drama, movies, and executives whose contributions have been of worldwide significance.

The International Institute of Arts and Letters is for the world what the American, the British, and the French Institutes and academies are for these countries. Its avowed purpose is international cooperation in the cultivation of arts, letters, and sciences. It publishes brochures and books by its fellows. At the headquarters in Switzerland, there is an international art museum.

UNPUBLISHED INDEX

Cheney's still unpublished "Index to Knowledge," a new-type dictionary, has been estimated to be of such bulk it will fill 26 volumes of a thousand pages each. It is the first dictionary that not only defines the terms, but enables the consultant to find his right word or the information he seeks in a matter of seconds. It is estimated that the work contains about 1 million terms, and was the work of his leisure hours for more than 50 years.

Among Dr. Cheney's other works have been: "Son of Minos," a novel of the bronze age; first published in 1930 by Robert M. McBride & Co., of New York, with foreword by Burton Rascoe. Mr. Rascoe was formerly editor of the Bookman and literary editor of the New York Herald-Tribune. He was an authority on Greek literature, and indeed refused the chair in Greek offered him by Yale.

"Son of Minos" was twice recommended by the authoritative journal of English of the University of Chicago for use in schools and colleges, and was and is so used by many, including old English 22 at Harvard, Tufts, Brookline High, Lowell Teachers College, Bridgewater Teachers College, Andover, etc. A second edition was published in 1941 by Bruce Humphries, Inc., of Boston—and the book still lives.

HISTORICAL NOVEL

In 1942, Dr. Cheney's historical novel of the Third Crusade, "Bow Strings," was published, and was also recommended by the University of Chicago Journal. This book is now out of print.

Among his other works are the brochures, "The Madonna of Martha's Vineyard" and "A Collection of Crusoes," the latter being a reprint first appearing in the old New Bedford Standard and the Boston Sunday Globe. His story of the fighting in Flanders, sold under a pseudonym to the New York Times and appearing in two installments in its Sunday issues, was reprinted in Current History as one of the outstanding tales of the war, based on the actual adventures of a soldier in the Princess Pats, Romeo Houle. His newspaper work included feature stories in the New York Times, the old New York Herald, the Boston Sunday Globe, and numerous articles in Parade magazine of the Worcester Sunday Telegram, editorials, and in other years numerous verses.

Dr. Cheney was elected to "Who's Who in New England" in 1947; and to "Who's Who in the East" in 1951, where his biography is still to be read. He served on the English faculty of Tufts College for many years, and was during that period director of the bureaus of employment and publicity and faculty director of the Tufts Union. When radio was in its infancy he began broadcasting from old station WGI on Medford Hillside—before any commercial sets could be bought and when the broadcasting room was a little chamber only twice the length of a modern telephone booth. He was one of the first "radio uncles," and, as Uncle David, carried on for some years a children's period at WGI. When the burden of his other college duties made it advisable, he resigned, as "Uncle David," and was succeeded by Big Brother Bob Emery, who there began his distinguished career as an entertainer.

RADIO WORK

Dr. Cheney wrote one of the first literary compositions prepared especially for the radio, "The Golden Goblin, a Fantasy." Its popularity was such that, after being repeated 3 times, the little fantasy was published and some 10,000 copies sold. Music for one of the lyrics was written by Mrs. Leo R. Lewis, a well-known composer, and presented to Dr. Cheney—but the music has never been published, and Dr. Cheney plans to seek a publisher to revive the little booklet.

Dr. Cheney was educated at Clinton High School and left for Harvard before graduation. He had sold to Old St. Nicholas a short story in his sophomore year, and as a result was admitted to Harvard as a special student (at that time a unique occurrence) in 1904 without any examinations. In college he soon made the dean's list for scholarship, and while a student, by extra courses removed all his conditions, became a regular student at the close of his fourth year, and returned a fifth for his degree. He received his bachelor's degree in 1909 as of his class, 1908, with the old honor distinction in English, cum laude.

Mr. Cheney received his master's degree in history from Tufts College, in 1925. He taught advanced English composition at Harvard University for years, in association with the late Prof. Frank Wilson Cheney Hersey, in old English 22, an honor course. In 1941 he was appointed head of the course in advanced English composition, given by the colleges of Greater Boston as an extension course, under the direction of Harvard. This course was founded by the famed nature writer, Dallas Lore Sharpe, head then of the English department at Boston University. One of Dr. Cheney's predecessors in this work was the famed "Copey", Prof. Charles Townsend Copeland. The course counted for a degree in any college.

MANY BOOKS

Among the many books Dr. Cheney has edited have been Satyananda Roy's "My Boyhood in India," Dr. Meyer's "Seven Seals of Science" (used by many colleges, including M.I.T.), "Job Hunting and Getting," and Ruth Kilgour's beautifully illustrated and printed "A Pageant of Hats, Ancient and Modern" (Robert M. McBride & Co.) Mrs. Kilgour is the wife of Vernon Kilgour of West Boylston and formerly of Clinton.

For some years, Dr. Cheney conducted his own school for professional writers in Boston. During part of this period, he served as dean of the English department of Stanley College, which had given him the honorary degree of doctor of the art of oratory in recognition of his long teaching in Boston Public Library, and of his novel "Son of Minos."

Dr. Cheney married Miss Gratia B. Bryant in 1910, a cousin of William Jennings Bryan (her branch had added the "t"). Two children are living: Mrs. Walter Haynes Dunn, of Clinton, who sold her first poem to Good Housekeeping when only 20, and Mrs. Lewis Wellington Knaggs, of Traverse City, Mich., who sold her first poem to the Saturday Evening Post, stimulated by her sister's success, at 17.

There are six grandchildren: Walter Cheney Dunn, a freshman at Clark University; David MacGregor Dunn, president of the senior class at Clinton High School; Marcia Carol Dunn, of Clinton; David George Knaggs, Ann Marie Knaggs, and Robert Lewis Knaggs, of Traverse City.

The Crisis on the Commuter Railroad: No. 4

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. IRWIN. Mr. Speaker, in my series of CONGRESSIONAL RECORD articles calling attention of Congress to the crisis on the commuter railroads, considerable stress has been placed on the obvious problems of safety and inconvenience to the commuters themselves.

There is, however, still another side to this issue—that of potential economic distress to a large, concentrated and prosperous interstate area served by the New Haven Railroad.

To highlight this particular side of the problem, Mr. Speaker, I am introducing into the CONGRESSIONAL RECORD a statement of the Wilton, Conn., Democratic Town Committee with respect to the transportation problems created by the New Haven Railroad.

The statement follows:

STATEMENT OF THE WILTON DEMOCRATIC TOWN COMMITTEE WITH RESPECT TO THE TRANSPORTATION PROBLEMS CREATED BY THE NEW HAVEN RAILROAD CO.

The New Haven train operation directly affects a large, concentrated and prosperous interstate area of which Wilton is a part. A concerted drive is necessary to correct conditions that any day may result in human disaster and, on a longer basis, severe economic distress. Every person in every community served by the New Haven is directly affected.

Twice daily the commuters are exposed to delay, discomfort and possibly injury or even death. The uncertainty of train arrival interferes drastically with business and, unless corrected, will compel these families to move away from Wilton to places nearer their jobs.

Local business in Wilton depends on the safe and reliable transportation of commuters from home to work and back. Our commercial enterprises are geared to this service.

All property values of every sort in Wilton are directly related to transportation and accessibility by rail. Removal of residents to places nearer their work will depress all values and leave the town less able to carry the heavy bond indebtedness incurred to provide schools for the present and anticipated population.

The breakdown of the New Haven's rail service thereby becomes an immediate threat to every resident of Wilton and its recovery is urgently necessary for the welfare of our town and all who live in it.

Moreover, this paralysis of service cannot be confined to the so-called commuter areas. A rotten spot soon and inevitably spreads over the whole apple. This problem not only requires statewide action but must enlist the attention of the whole of Connecticut.

The signs of this are plentiful. The rail service between Waterbury and Hartford has been suspended. The New Haven has declared that it will stop service on the Pittsfield line beyond Danbury. These are not commuter services. They affect the health and welfare of towns and cities all over the State.

There has been a great deal of talking and very little action while the situation deteriorated. It has reached a point where action can not be longer deferred.

Specifically, we ask examination by our public officials of the steps other threatened States and areas are taking, to develop plans for our protection and for area cooperation.

Massachusetts, having tried subsidy for the Old Colony branch of the New Haven, is investigating ways of taking over control and operating the line in the public interest.

Philadelphia is forming an Authority which will hire the Pennsylvania & Reading Railroads to run its trains under the Authority's control. If this becomes a subsidy, its use will at least be determined by public direction and in the public interest rather than by the railroad managements for their interest.

The Long Island Railroad has been transformed and, after its long and notorious failures, is apparently giving satisfactory service.

An alternative for the New Haven which should be investigated is enforced reorganization on the ground that the management has neither ability nor a program nor a desire to discharge its charter obligation of serving safely the public convenience and necessity. Mr. Alpert's seemingly single solution is to raise fares indefinitely, without a promise of giving better service, indicating that he is concerned only with the safety of railroad investors at the public's expense.

Other threatened or afflicted areas are more active in self-protection through their elected officials than ours is. They are providing ideas and programs which deserve to be studied.

We call on our Representative to call together all the Fairfield County members of the general assembly so that, as a group, they can persuade all other legislators that this is a statewide danger, a creeping paralysis which is already affecting them, requiring a statewide solution.

Transportation is a governmental obligation and is only delegated to private facilities in the belief that private enterprise is better able to keep the Nation's lifelines open with economy and efficiency. Whatever the cause of the disastrous plight of the New Haven, it must be eliminated and the service restored. The whole public must carry its proportionate share of the cost, properly protected, and this includes train riders, property owners, business enterprises, job holders, railway management, bondholders, stockholders, and perhaps even creditors.

Railroads

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include a speech delivered by my good friend Mr. A. L. M. Wiggins, chairman of the board of the Atlantic Coast Line and Louisville & Nashville Railroads.

I am certain that since we have several pieces of legislation pertaining to railroads pending before the Congress each Member would be interested in the statements contained in Mr. Wiggins' speech.

Mr. Wiggins has served as Under Secretary of the Treasury of the United States and has been one of our State and National leaders for a number of years. I hope every Member will take a few minutes of his precious time to read this speech:

RAILROADS

My comments on the railroad industry will be brief. I do not pretend to speak for the industry nor anyone else but will make some personal observations.

A logical conclusion seems to be that if the postwar deterioration of the railroad industry continues at its present pace without removal of the impossible handicaps under which railroads operate, some railroads are headed toward serious financial difficulties and the specter of the nationalization of the industry may rear its head by the end of the decade.

These handicaps are well known. They include (1) archaic, outmoded, and restrictive laws and regulations by Government—Federal, State, and local; (2) the competitive disadvantage of railroads in depending on user charges for their entire operating revenues while paying their full costs in competition with other forms of transportation that have the use of facilities and services and subsidies provided at the taxpayers' expense and are promoted and financed in part by Government agencies; and (3) operation under uneconomic contracts of employment that provide for payments for work not done and services not performed.

Railroads are regulated by both State and Federal Governments and have little freedom in pricing their services to reflect increasing costs. Competition with other modes of transportation, regulated and unregulated, imposes a ceiling on rates. With 65 percent of railroad operating expenses represented by labor costs, spiraling wages and increasing fringe benefits, along with uneconomic work rules and practices, have a devastating effect.

Here are some of the results of the past decade: (1) In spite of the general business prosperity in recent years and notwithstanding a net increase in property investment of over $4 billion, operating revenues of the railroads in 1958 were less than in 1948; (2) revenue ton-miles in 1948 of 638 billion had dropped to 552 billion in 1958; (3) revenue passengers decreased from 643 million to 380 million in the 11-year period; (4) net railway operating income in 1958 was only three-fourths of 1948; (5) the rate of return on investment in 1948 was 4.31 percent and in 1958 and 1959 the rate was about 2.75 percent; (6) average compensation per employee in 1948 was $3,594 and in 1958, $5,865, an increase of 63 percent; (7) in 1948, labor's

share of the earnings from direct railroad operations as related to capital's share was 82.7 percent and in 1958, 87 percent.[1] It is easy to see what the railroad situation will be if the trend of the past decade is projected through the 1960's.

I cannot believe that the American people will stand by and permit the railroad industry to go down the drain as private enterprise when all that is needed is equality of treatment of the railroads and equality of opportunity with other forms of transportation.

The U.S. Government recognizes the importance of rail transportation to other countries by making grants and loans to build, equip, and modernize their railroads. On the other hand, it is ironic that there is no executive agency of our Government that is primarily concerned with fostering policies to maintain a strong and effective railroad industry in this country. This fact becomes painfully apparent in the failure of the executive branch of Government to present an effective and adequate program to rehabilitate the railroad industry in congressional hearings that resulted in the Transportation Act of 1958. Other forms of transportation are fully and properly represented by agencies in the executive branch of the Government. The Interstate Commerce Commission cannot be the spokesman for the railroads. It is an independent, semijudicial body, responsible to Congress, having certain duties and functions affecting several forms of transportation but by its nature cannot help the railroads carry their fight for survival on a basis of equal treatment. Some agencies of Government actively oppose the railroads in hearings before the Commission in their efforts to obtain fair and equitable relief from inadequate compensation for services. Other departments go even further by pursuing a vigorous policy of diverting traffic from the railroads to other forms of transportation.

Clearly, the time has come for a reorganization of the various governmental agencies dealing with transportation, preserving the independence of the semijudicial bodies while bringing together the administrative and promotional agencies under a new department of Government headed by a Cabinet officer. Such department should include an agency or division charged with the specific responsibility of fostering equal treatment by Government of the Nation's essential railroad transportation system. A healthy, vigorous, and growing transportation system including the railroads is essential to sound economic growth in this country. Problems of unification and coordination as well as the difficulties presented in an industry that is regulated in part and unregulated in part can be served only by a unified department of Government devoted to the problems of transportation.

It may surprise you to know that while the railroads of the United States are suffering from financial malnutrition and inequitable treatment by Government, railroad facilities and operations in Russia are being multiplied with the result that the railroads of Russia in 1958 handled more ton-miles of traffic than all of the railroads of the United States combined.

Nor is it surprising that the common stock of some of the principal railroads in this country can be bought in the market for less than 15 cents on the dollar of their invested capital and many of the rest can be bought at from 30 to 50 cents on the dollar. Little wonder that railroad officers find difficulty justifying the borrowing of money at interest rates of 5 to 6 percent to make capital outlays when the average return on their investment is only 2.75 percent.

It has now become fairly obvious that the most effective, most economical, and most serviceable transportation can be provided only by more completely unified and integrated national transportation systems under unified corporate structures that will permit using the advantages of every mode and method of transportation. A revolution of thinking and a complete change of transportation law will be required to bring this about.

Railroad management has not been negligent in its efforts to promote efficiency, to effect economies, to improve services, and to meet competition. It has shown courage, ability, and vision. Vast expenditures for the dieselization of the railroads produced economies that saved many railroads from bankruptcy in the past decade. In spite of the difficulties of financing, capital investments for improvements of railroad plant and equipment exceeded $15 billion since the end of World War II. The railroads are utilizing the advantages of automation and of electronic equipment, installing pushbutton freight yards, multiplying trailer on freight car service, and are moving vigorously into the broad field of containerization. The possibilities of substantial savings by mergers are under study by a number of railroad managements. All that management needs is to be released from the shackles of impossible handicaps.

The handicap that represents a roadblock in utilizing modern equipment and methods to improve efficiency and reduce costs is the failure to modernize working rules and bases of compensation of employees to meet the technological advances of the railroad industry. Farsighted union leaders should recognize the necessity of utilizing the most modern techniques for reducing costs, improving service, and increasing productivity as the final resource out of which compensation of employees can come. It makes no sense for union leaders to vilify railroad managements in their efforts to strengthen the industry by programs to increase the productivity and the value of the services rendered by the employees. Based on a personal acquaintanceship with many railroad workers, I affirm that there is no finer group of employees and citizens in the country. They are honest, hard-working, and loyal to the railroads by whom they are employed. Some of them are disturbed over the moral and ethical as well as the economic questions involved in some of the existing labor contracts. They want to do what is fair, and reasonable, and proper, in terms of their interests and of the railroads as well. They are looking for statesmanship in their leaders that will help strengthen the railroad industry. I am confident that in the course of time such leadership will emerge.

CONCLUSION

I have presented only a few of the hurdles and hassles of the 1960's that must be met if the growth of this country is to reach its highest potentials in the coming decade. There are, of course, many others that are significant and important.

What, then, should be our role in these developing contests of the 1960's? As business leaders, we believe that the operation of a free, competitive private enterprise system is the most productive and fruitful economic system the world has known and that its benefits are more widely distributed to more people than under any other system. As citizens, we believe that our system of democratic government with the protection of individual freedom is the most satisfying social and political system that man has been able to devise. We believe that both our economic and political systems must be grounded on integrity, honesty, and the recognition of the rights and the dignity of the individual human being.

Our first task is to increase our own knowledge of the operations and functioning of our economic system and see to it that such knowledge is transmitted to the public and particularly to the students in our schools and colleges. Although there is more information available today than ever before about the operations of our economy, there is colossal ignorance as to how it really functions and what gives it creative force. The essential nature of the market economy in which the consumer is the ultimate authority, is poorly understood. It is estimated that less than 5 percent of the students in schools are taught anything about the functioning of the private enterprise economic system and even that 5 percent receive only a smattering of knowledge. Even worse, they are being taught in many cases that the continued widespread improvement in the standards of living of the American people is not the product of our competitive private enterprise system but is the gift of a great and wise and benevolent Government. In all too many instances, they are being led to believe that a private profit system operating in a market economy is antagonistic to the interest of labor and of the consumer and that big government is their only protection.

Less than one-fourth of the graduates of colleges and universities receive any education in the field of economics. How can we expect to preserve our private enterprise system when the rising generation is largely ignorant of its functioning and of its essential contribution to the well-being and to the progress of the American people?

We should also ask ourselves, How can we expect our democratic system of government to promote a sound economy when it is so largely controlled by pressure groups that effectively use their political power to promote their own interests without regard to the public interest?

We should recognize that the final arbiter of the future of this Nation is public opinion expressing itself through political action. Here is a field in which business leadership is negligent, timid, and ignorant. Business leadership has failed to exercise the rights and duties of effective participation in democratic government through personal political action. It has surrendered the determination of policies and programs of Government to groups that are politically active and effective in seeking their own ends. Some of these powerful groups are dedicated to programs that are essentially socialistic and antiprivate enterprise. It is a lamentable fact that what we know as a capitalistic economy which derives its energizing force for growth and development from the savings and investment of millions of individuals has more detractors than supporters among the so-called liberal intellectuals.

The major challenge to the leaders in business, finance and industry in this country is to respond to their duties and opportunities by exercising their leadership in the field of public information to the end that the public will know and understand that our competitive, free enterprise system is the base from which springs the prosperity and well-being of the American people. They must then translate that philosophy into policies and programs of Government through effective personal political action. The year 1960 provides that opportunity.

Secretary of Commerce Mueller sums up the challenge to the American people in these words: "We stand at a crossroad in history. The American people are making

[1] The relative division of the sum of all salaries, wages, health and welfare charges, unemployment taxes—as representing labor—and net railway operating income as representing capital.

material and moral decisions that may well set the course of our Nation and our world for the remainder of the 20th century. Not only progress but survival itself is in the balance."

What Sensible Americans Ought Not To Do

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I would like to include the following article by George Todt. It appeared recently in the North Hollywood (Calif.) Valley Times:

In a recent address here, Harry Bridges has advised his cohorts to concentrate on three items in particular:

1. Insist on a summit meeting.
2. Send local delegations to the U.S.S.R.
3. Work tirelessly for disarmament.

Bridges' instructions are always interesting, if only to point up what sensible Americans ought not to do.

The question of disarmament is intriguing, of course—for many more reasons than may appear on the surface.

The predominant one is the fact that the Soviet Union talks of disarmament out of one corner of its mouth and, at the same time, prepares overtime for a destructive air-space-nuclear war of aggression.

It is impossible for any astute observer of the facts of this case to assume that the Reds' predilection for disarmament on its own terms can be aught than a cunning propaganda device to further its effective form of psychological warfare against the West.

We have been warned amply of this type of diversionary tactic by no less than Dimitri Manuilsky, former Soviet military chief of the United Nations Organization, who, speaking at the Lenin School of Political Warfare in Moscow in 1931, prophesied:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we will need the element of surprise. The enemy will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them."

Manuilsky, now deceased, became chairman of the U.N. Security Council in 1949—which indicates that he was no small potato in the Red hierarchy. He knew what he was talking about. And 30 years from the date he spoke the lines just quoted would take us to 1961. How about that?

Unfortunately, the honeyed words of Ivan the Bear have already apparently taken their toll from the West. Most of our NATO allies in Western Europe have seized upon them to bring nearly to a halt their miserly contributions to our mutual security program.

Frankly, the effort put out by our talkative allies has been a miserable one when judged by any yardstick of measurement. Although the West Europeans were responsible for raising almost 500 army divisions in each of the two previous world wars, they profess to be unable to produce a couple of dozen today. They want us to do everything for them and they have almost milked the American taxpayer to death in the process. Recently there have been some official protests from our side.

Actually, it is time for Uncle Sam to put his foot down. It is patently impossible for America to fulfill her role as Warden of the Western Marches with her 180 millions of population while 300 millions of European allies sit on their backsides doing as little as possible. For the good of the latter, they must be weaned from our apron strings. And the sooner, the better.

What our Nation needs is a new and realistic look at the world situation—and we should put our allies on a firm quid pro quo basis exactly as Great Britain's brilliant Lord Castlereagh did in the days of the Napoleonic wars. The great Englishman played it this way: no quid pro quo, no money. Even prima donnas dance to this tune.

The modern American position in the same arena seems to have become: Take our money, and forget the quid pro quo if you wish to do so. As a matter of fact, our allies have apparently convinced our inept statesmen that it would amount to political blackmail if we were to attach any strings to our monetary grants. This is for the birds. Nobody deserves our money unless he renders us a service. Where is it?

The time has come for us to tell the Western European members of NATO to shoulder their own defense and to take care of the necessary aid to the underdeveloped nations our alliance is concerned with in the scheme of things today. Let them shoulder this portion of our burden—they are doing precious little of anything else.

As for the resultant savings, we should invest it in overwhelming air-space-nuclear supremacy which will give even the Reds pause in their diabolical plans to master the earth and its people.

Here at home, we should cut down on outdated ground and naval forces and concentrate on the most superlative air-space-nuclear qualitative weaponry which we can produce for ourselves. The future of free men and women on this planet may well depend on it. Can we afford to take chances?

Let the Republicans forget that Senator STUART SYMINGTON, Democrat, of Missouri, has been the foremost voice in this direction over past years—and get into the act of their own accord.

Let the Democrats stop making political hay so selfishly for themselves and bid correctly for bipartisan support on this great overriding issue of today.

And let the American people forget about partisan politics long enough to make sure they have the air-space-nuclear wherewithal to defend our flag against all comers in the future.

What better way than this to insure peace with justice in our time?

Adm. Husband E. Kimmel States His Position Regarding Relations Between the United States and Panama

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a letter, dated January 17, 1960, which I received from Adm. Husband E. Kimmel, a distinguished Navy officer now in retirement, in which he expresses his views concerning the relations between the United States and Panama, with specific reference to the U.S. position in the Canal Zone. Admiral Kimmel's letter is reproduced here with his written permission:

JANUARY 17, 1960.

DEAR CONGRESSMAN FLOOD: Thank you very much indeed for sending me a copy of the address you delivered in the House on January 13, 1960, in regard to recent events in the Panama Canal Zone and their implications.

I hope your efforts to reverse the present policy of appeasement are successful. Unless this policy is reversed, the United States will lose control not only of the Panama Canal, but of the whole Caribbean area which in turn will lead to demands for further blackmail throughout Latin America and the world at large.

My best wishes for your success in this undertaking.

Most sincerely,

HUSBAND E. KIMMEL.

Renaissance International

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. HUMPHREY. Mr. President, the other day a leaflet of more than usual interest fell into my hands. It is a statement of purpose of a new intercultural organization known as Renaissance International, Inc., a nongovernmental, nonpolitical agency devoted to improving international understanding and friendship on a people-to-people basis.

Although Renaissance International is scarcely two months old, it has already attracted favorable comment by distinguished persons here and abroad. The first activity of the new organization will be an international seminar on world art to be held late in November 1960 here in Washington.

Because of its unique character and its devotion to the pursuit of excellence in all aspects of culture, I am taking the liberty of calling it to the attention of my colleagues in the Senate. From its statement of purpose and philosophy, I feel confident that it will make a significant contribution to the cultural life of the United States and other nations in the years ahead.

Mr. President, I ask unanimous consent that the statement of purpose of Renaissance International be printed in the Appendix of the RECORD.

There being no objection, the statement of purpose was ordered to be printed in the RECORD, as follows:

STATEMENT OF PURPOSES OF RENAISSANCE INTERNATIONAL

AIMS

Renaissance International is a nonpolitical, cultural organization devoted to improving international understanding and

friendship on a people-to-people basis. It strives to safeguard and expand the basic concepts of freedom, liberty, and the dignity of the individual. It is dedicated to recapturing the Renaissance spirit in the 20th century: the pursuit of excellence in all human endeavors leading to genuine cultural values. It intends to establish facilities for social and academic meetings.

PHILOSOPHY

The philosophical framework for the organization was inspired by the ideas prevalent during the centuries of the European Renaissance from 1300 to 1600. Unprecedented scientific breakthroughs in recent years compare in many respects with discoveries of the 14th and 15th centuries. Once again we experience a need for pure research, discussion, self-criticism, and development of the arts, as well as the ardor for a more creative and abundant life. Culture determines a people's spiritual, mental, and material well-being. Excellence at all levels of achievement provides the base for culture. The self seeks instinctively for mastery and excellence—to nurture and encourage that mastery builds genuine culture. High individual performance is the mainspring of the dynamism to be emulated in the Renaissance philosophy.

MEMBERSHIP

Both sexes of any nationality may become members in RI. Each applicant will be judged by the degree of excellence achieved in his chosen field of endeavor. Election to membership will be for life.

PROGRAMS

RI plans to conduct international meetings on the arts, science, education, and philosophy. Initially, seminars will be held in Washington, D.C., and will consist of plenary sessions, lectures, and group dynamic discussions in special fields of interest. It is also planned to award fellowships in various fields to persons who have made outstanding contributions in the renaissance fields. In the overseas establishments, in addition to seminars, it is planned to offer daily programs featuring the finest in the arts, e.g. concerts, exhibits, and social events designed for the members' entertainment. The first Renaissance Society Conference is planned to examine a renaissance in world art through an international seminar to be conducted in Washington, D.C., in late November 1960. Artists, art students, professors, art collectors, and art historians, worldwide, will be invited to exchange ideas and information on the role of art in fostering international understanding and culture.

ORGANIZATION

Renaissance International, Inc., is a service corporation for the Renaissance Society. Stock may be purchased in Renaissance International, Inc., only as outlined in the offering circular. It is planned to build a society of about 10,000 international members.

FACILITIES

Initially, the society proposes to secure physical facilities in Washington, D.C., or in Rome, Italy. Subsequently, facilities may be established in Paris, London, and Frankfurt. Clubrooms will be decorated in the Renaissance motif. Original paintings, statuary, books, jewelry, and other objects d'art will be collected by the Society for display in its buildings; a restaurant, conference rooms, and other accommodations are projected. It is planned to contract for these facilities at the earliest practicable date.

ADVISORY COMMITTEE

The Renaissance Society's advisory committee will consist of prominent persons of many nationalities recognized for their leadership qualities.

INFORMATION

A quarterly Renaissance Bulletin will be sent to all society members. It will contain programs of general interest in the fields of international communication, science, and education. The society maintains offices at 934 E Street NW., in Washington, D.C.

"Dead Hand at the Throttle"—The Damage to the Railroad Industry From Outmoded Regulations

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. CUNNINGHAM. Mr. Speaker, a recent editorial in the Washington Daily News is entitled "Dead Hand at the Throttle." The dead hand refers to ancient Federal regulatory legislation which stifles the vital railroad industry.

While the editorial points out that repeal of these outmoded rules and regulations would not solve all of the problems plaguing this industry, it makes the telling point that relief would be a shot in the arm to the railroads and enable them to compete more fairly with other forms of transportation.

It is time to consider the problems of railroads now.

The editorial, which appeared February 2, 1960, follows:

DEAD HAND AT THE THROTTLE

A railroad strike could damage the country vastly more than even the 116-day steel shutdown. Negotiations between management and a number of the rail unions are continuing, but he pattern increasingly resembles the march of events which closed the steel mills. The two sides are far apart, with no sign of material concession by either.

The railroads say they can't pay the 12 to 14 percent pay increase demand by the unions and they raise the familiar issue of work rules. "Featherbedding," they say, is costing them $500 million a year.

Railroad men, meaning the crews which operate the trains, have traditionally been substantial citizens. There is, we think, much sympathy with their efforts to protect both their jobs and their pay scales.

On the other hand, the financial plight of the railroads is unquestioned. They have been plagued by punitive taxes and hog-tied with outmoded regulations which hamper their competition with other forms of transportation. The fact soon must be faced that there isn't much more blood in that turnip.

The situation as regards the locomotive engineers is near the breaking point. They have halted negotiations and will poll their 40,000 members on a strike. The firemen are in a similar position but have asked mediation. In all there are 711,000 railroad workers, rerpesented by 21 unions. A walkout by almost any of these could throw the others out of work and cause widespread further unemployment by halting the Nation's principal means of transportation.

Fortunately a strike cannot come abruptly. Under the Railway Labor Act, it must be delayed for 60 days while a factfinding board studies the controversy and makes recommendations. That would throw a strike—if there is to be one—sometime into the early summer.

Federal regulatory legislation, written when the rails were a virtual monopoly, keeps a dead hand on the throttle of this vital industry. Repeal of a lot of it would not magically solve all the railroads' troubles. But it would help. It would encourage aggressive managements to go after the business which would encourage investment in new equipment and provide workers a respectable wage.

Congress should give this matter serious attention while there still is time—rather than wait for an emergency requiring abrupt action to keep the trains moving.

No Housing Worries Here

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. GREEN of Oregon. Mr. Speaker, in a recent issue of the Reader's Digest there appeared an article about a housing development in the city of Portland, Oreg., pointing out some of the very fine things that have been done by private groups in providing housing for retired persons. The article's description of Willamette View Manor was a good one, and deservedly so. Portland is very proud of the work done to establish this apartment development for some of our senior citizens.

This effort by a distinguished Portland Methodist organization, standing alongside projected developments by other church and civic groups, is an outstanding example of what can be done by private citizens to meet the housing needs of retirees. It is a real credit to the State of Oregon, and to the dedicated people who have made it come true. To this extent, the Reader's Digest article was one which Portlanders could read with pride and approval.

However, the title of the article was extremely misleading and, taken at its face value, would have indicated a very incorrect picture of the housing situation in Portland as its affects retired people. The title was "No Housing Worries Here." That is simply not the case.

Mr. Gene Rossman, executive director of the Portland Housing Authority, has written to the Reader's Digest pointing out the serious housing problem which remains in Portland, in spite of the existence of Willamette View Manor, and other similar projects being developed or planned. A copy of his letter and an article which he prepared for the Digest was sent to me. Today I received a letter from Mr. Rossman informing me that his article had been returned by the Reader's Digest because it was not in line with the editorial requirements of Reader's Digest. It is unfortunate that this magazine should not feel free to print material correcting the false impressions which a prior article may have

given its readers. The conservative editorial policy of the Reader's Digest has long been sensed by most people but this admission that material showing that there is a housing shortage does not fit their editorial requirements is, in my experience, a uniquely frank one.

However, I do feel that the materials brought together by Mr. Rossman should be made available to the public, to combat the incorrect notion that there are no housing problems in Portland. Under unanimous consent, I include Mr. Rossman's letter to the Digest and the accompanying article at the conclusion of my remarks in the RECORD.

The letter and article follows:

HOUSING AUTHORITY OF PORTLAND, OREG.,
Portland, Oreg., January 8, 1960.

Mr. DEWITT WALLACE,
Editor, Reader's Digest,
Pleasantville, N.Y.

DEAR MR. WALLACE: Nothing could be further from the truth than the title of the story starting on page 193 of your January issue—"No Housing Worry Here."

From my vantage point as executive director of the Housing Authority of Portland, Oreg., I am in position to observe conditions, as they actually exist, that relate to the real problems on housing of a vast majority of our aging population in this area—and perhaps throughout the country.

Our recent physical survey of the private dwellings of Portland's more than 5,000 senior citizens who are recipients of old-age assistance alone revealed that over 75 percent of these oldsters are presently housed in critically substandard living quarters. The results of this survey were carried in the Nation's press and eventually encompassed three pages (14813–14815) of the August 18, 1959, CONGRESSIONAL RECORD of the U.S. Senate.

Attached is the story as I see it. I hope you will publish it, if only to keep the record straight. There is a housing worry here in Portland, Oreg.—a worry that has this responsible community really concerned.

This worry does not relate to the elderly who can afford to while away their golden years in beautiful, palatial retirement homes such as featured in your January issue. Our community's concern is that the less fortunate and by far greater proportion of our senior citizens may spend their declining days in dignity—housed in decent, safe, and sanitary dwellings.

Yes, Portland, Oreg., does have a housing worry—a problem that cannot be solved by such elaborate and expensive manors as the one you describe.

Sincerely,

GENE W. ROSSMAN,
Executive Director.

You don't have to be old to be poor, but it helps. Every passing day marks the 65th birthday for more than a thousand Americans most of whom have seen their earning capacity sharply reduced by on-rushing old age and their dwindling savings virtually wiped out by inflation, spiraling taxes, and the mounting cost of medical care.

In 1954, nearly half of the families headed by a person age 65 or older had a gross annual income of less than $2,000, and about two-thirds of all persons age 65 and living alone or with nonrelatives had an income of less than $1,000 a year. Subsequent surveys have indicated that the economic position of this country's aging population is progressively deteriorating.

"Fifteen million people in the United States are age 65 or over. Since 1900, the total population of the United States has doubled, but the number of persons 45 to 64 years of age has tripled, and the number age 65 and older has quadrupled"; these are statistics made public in January, 1957, by the U.S. Senate Committee on Labor and Public Welfare in its "Fact Book on Aging." This report, although the latest of its kind, is now 3 years out of date, and nearly a million more people have since joined the ranks of the senior-citizen population of the United States.

While church and fraternal organizations are building Utopian retirement homes with built-in medical care for their elderly members of at least moderate wealth, what's to be done about housing and caring for the needy aging—a vast number of whom are living in disease-ridden, rotting slums?

A recent survey conducted by the Housing Authority of Portland, Oreg., revealed that of some 5,000 elderly persons who are recipients of old-age assistance in that city, more than 75 percent are presently housed in seriously substandard dwellings. Average gross monthly income of these senior citizens was determined to be $99.44. Doesn't approximately this same situation exist in almost every part of the country? Reports of similar surveys from other areas would so indicate.

While the 1959 report of the Joint Economic Committee of the U.S. Congress plumps for larger unemployment benefits, more Federal aid for education, for medical research and scientific research, and while United Fund-Community Chest drives clamor for finances to aid youth movements and a variety of disease research programs—all worthy beneficiaries; who is really seeking a sound solution to the Nation's No. 1 internal economic and social problem: the housing and care of the indigent aged?

Our Nation's lawmakers are talking about generously expanded social security benefits in 1960—mainly of increasing the minimum pension from $33 per month to $40. What will this added $7 buy in terms of decent, safe and sanitary shelter, in terms of adequate food and clothing and proper medical care for our indigent oldsters whose numbers are multiplying so fast that last year's statistics are today woefully obsolete?

The fact that the United States pays out more than $2 billion a year in matching State and local aid to the needy aged, the blind, the disabled, and dependent children, is of small personal satisfaction to our growing population of senior citizens who face their golden years without funds or hope. Their meager share of the total welfare outlay gives them little expectation of spending their declining years in dignity.

Some say that people who don't have the fortitude and perseverance to save successfully for their declining years during their productive years do not deserve very much in the way of consideration. Yet how many of these less fortunate old people are hapless victims of our times, former productive citizens of considerable character and substance who have contributed their share, and more, in taxes, in community effort through church, fraternal, and civic activity, in service to their country in time of war? In the name of humanity, can their problem be ignored?

Portland, Oreg., does not presume to ignore their problem. On the drawing boards of the local housing authority are plans for a 10-story apartment house to provide 120 units of decent, safe, and sanitary housing accommodations for senior citizens of low income. The building will be located in downtown Portland near the present living quarters of the largest concentration of elderly persons on old-age assistance in the city. Such luxuries as glass-paneled shower stalls, featured by many private retirement homes for the well-to-do aged, will not be incorporated into this planned structure. Every effort will be made, however, to provide the basic safety and sanitation factors that will permit the aged tenants to live in comparative comfort and security—within the budgetary limitations imposed by the Federal Government. A review of the rentals presently paid by the 96 elderly tenants living in cottage-type permanent units of the Housing Authority of Portland shows the average monthly gross rent to be $32.57. Average gross monthly income of these tenants is $134.54. To be financially feasible, it would appear that—even with its Federal subsidy—this new project must charge a minimum rental of $45 per month. This will leave a pitifully small monthly balance from which the average tenant may be expected to meet the expense of barest necessities—food, clothing, and medical care.

Portland's public housing project for the elderly in the downtown area is being patterned closely after the very few similar projects already in successful operation throughout the Nation, notably in Cleveland, Ohio, and in New York City. A small area in the project will be made available for community-service activities, such as visiting nurses headquarters, TV room, crafts area, small library; but under Federal regulations these facilities may not be equipped or staffed through public-housing funds, and the local housing authority must rely upon contributions from local private and public agencies.

When completed, this new project will accommodate barely 3 percent of Portland's elderly persons who are recipients of old-age assistance alone and who are known to be presently residing in critically substandard living quarters. What about the other 97 percent? And what about the additional thousands of low-income elderly in the local area who are miserably subsisting on small pensions and/or social security and who are living in rundown family homes or walkup, cold-water flats?

Significantly, public awareness of this situation is being brought into sharp focus as such public works as Federal and State highway construction and local urban renewal development are displacing our indigent elderly at a rapid pace.

But what good is public awareness, really, when for lack of adequate Federal funds nothing substantial can be done to relocate these displaced, indigent oldsters in decent, safe, and sanitary living quarters at a price they can afford to pay.

Reports from other local public housing authorities throughout the Nation indicate that Portland's problem is not peculiar to this specific area, but exists to lesser or greater degree in metropolitan and rural areas all over the country. The main point is that local communities are unable to cope with it. It is a Federal problem.

According to recent news reports, Nikita S. Khrushchev seems to be currently taking time out from his saber-rattling to put his own house in order, to build economic security for his own people at home. Couldn't Uncle Sam take his hand off the holster for only a moment or two and divert just a few billions from "aid to foreigners" to "aid to our own aged"?

Birkett L. Williams Elected President of the National Automobile Dealers Association

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. VANIK. Mr. Speaker, as a Clevelander, I take great pleasure in di-

recting attention to the election of Mr. Birkett L. Williams, of my city, as president of the National Automobile Dealers Association at its annual meeting which is closing in Washington this week.

I first met Birkett L. Williams as a fellow member of the board of trustees of the Family Service Association of Cleveland, a united appeal organization, dedicated to the preservation of family unity in our community.

To Birkett Williams the obligations to the community come first. Clevelanders are thoroughly familiar with his work in the Red Cross, the Community Fund, the Boy Scouts, and Family Service Association, and a host of other civic organizations.

During World War II he served as OPA Director, an exacting assignment he carried out with dispatch and distinction. He also served a term as safety director of the city of Cleveland, a most difficult and demanding job which he handled with skill and with courage.

In the automotive trade in Cleveland, in Ohio, and throughout the Nation Birkett L. Williams is recognized as a symbol of business integrity in a business activity of tense and vigorous competition. For over 35 years as an automobile dealer in Cleveland he has developed and maintained the highest business standards of the industry.

Mr. Birkett L. Williams richly deserves the honor which the Nation's auto dealers have conferred upon him this week. The industry will be enriched by his inspiring leadership and his lasting contribution.

Lawyer-Pilots Association

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. CAHILL. Mr. Speaker, I am happy to bring to the attention of the Congress the formation of the Lawyer-Pilots Association and am happy to note that its first national president is a resident of the first district of the State of New Jersey.

I have known personally several of the incorporators of this association and can attest to their civic-mindedness, their patriotism and their intense interest in all things pertaining to aviation.

The Lawyer-Pilots Association was incorporated as the Legal Eagles Association under an act of Legislature of the State of New Jersey, entitled "Title 15, of the Revised Statutes," and the several supplements thereto and acts amendatory thereof, being a corporation other than one for pecuniary profits.

The purposes for which this corporation is formed are to promote a spirit of fellowship within the legal profession for those having a pilot's interest in aviation; to promote general aviation safety; to promote cooperation with civilian agencies in times of emergencies and engaged in the welfare of our country; to assist in the drafting, interpretation and enforcement of laws affecting aviation in all of its phases; to study and attain more advanced proficiency and knowledge in the operation of aircraft; to stimulate aviation consciousness and acceptance in young men and women and to advance safe flying procedures.

The original incorporators were: Albert Rathblott, William G. Freeman, and the Honorable Alfred R. Pierce, all of Camden, N.J., Merrill Armour, of Washington, D.C.; Alfred L. Wolf and Frank Kingston Smith, of Philadelphia, Pa.; Stuart M. Speiser, David C. Quinn and Howard G. Law, Jr., all of New York City.

The corporation held its first meeting on October 25, 1959, at the Concord Hotel, Monticello, N.Y., where the membership, by appropriate resolution, amended the certificate of incorporation to change the name Legal Eagles Association to the Lawyer-Pilots Association.

The first board of directors elected by the association were: Albert Rathblott, Camden, N.J.; Edwin Marger, Miami Beach, Fla.; Frank J. Docktor, Washington, Pa.; Lackland H. Bloom, St. Louis, Mo.; Herbert H. Freise, Walla Walla, Wash.; Margaret L. Lebair, Trenton, N.J.; Charles W. Sydnor, Sandston, Va.; Charles R. Conklin, Delta, Colo.; Robert N. Grosby, Norwalk, Conn.; Merrill Armour, Washington, D.C.; Somers T. Brown, Washington, D.C.; Don N. Kersten, Ft. Dodge, Iowa; Robert G. Lake, Pratt, Kans.; Ernest L. Bell III, Keene, N.H.; Howard G. Law, Jr., New York, N.Y.; Stuart M. Speiser, New York, N.Y.; Nicholas Zinni, Batavia, N.Y.; William A. Richards, Columbus, Ohio; John D. Starn, Fremont, Ohio; Jerry O. Stephens, Youngstown, Ohio; Dean L. Foote, Allentown, Pa.; Oliver N. Hormell, California, Pa.; Frank Kingston Smith, Philadelphia, Pa.; Alfred L. Wolf, Philadelphia, Pa.; John A. Varone, Providence, R.I.; Sheldon N. Lelchuk, Miami Beach, Fla.; John W. Kitchen, Toledo, Ohio.

The officers of the corporation are: Albert Rathblott, national president; Edwin Marger, regional vice president, southeast region; Frank J. Docktor, regional vice president, northeast region; Lackland H. Bloom, regional vice president, central region; Hon. Herbert H. Freise, regional vice president, western region; Margaret L. LeBair, secretary; and Charles W. Sydnor, treasurer.

Membership in this association is open to all who are duly licensed lawyers and hold, or who have held, a valid pilot's certificate. Membership, for a term not exceeding 1 year from the date of the original application for membership, is available for duly licensed lawyers who hold a student's pilot certificate, with at least 5 hours of solo flight time.

The aim of the association basically concerns aviation safety and the democratic administration of the civil air regulations and appropriate statutes.

The association now has membership in 34 States and applications in process for membership in 12 additional States.

The States which now have members are as follows: Arizona, Arkansas, California, Colorado, Connecticut, District of Columbia, Florida, Indiana, Iowa, Kansas, Kentucky, Louisiana, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, Tennessee, Texas, Virginia, Washington, West Virginia, Wisconsin, Wyoming, and the Virgin Islands.

Applications are pending in Alabama, Delaware, Georgia, Idaho, Illinois, Maine, Maryland, Montana, Nebraska, Nevada, Utah, and Vermont.

I wish the members well in their endeavors and am certain they will make definite contributions to the advancement of safe flying conditions and the progress of aviation in the United States.

Tax Benefits for Conservation Groups

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. PHILBIN. Mr. Speaker, in recent months there has been an unfortunate tax development affecting conservation organizations, including the Audubon Society with whose work and objectives most Members of Congress are familiar.

These conservation groups carry on outstanding programs to educate the public, safeguard our natural resources, and preserve the scientific, educational, and recreational areas of our country. Few, if any, will dispute the great work of these organizations, so much so that historically the Congress has granted special tax exemptions for conservation groups.

On the other hand, Congress has also sought to restrict abuses of special interest groups by curbing tax exemptions to those groups who among other things are attempting to influence legislation.

Current interpretations of this law are posing serious problems to conservation organizations although so far as I know no bona fide conservation group, certainly not the Audubon Society, devotes any substantial part of its activities to influencing legislation. Yet, if any activity of a conservation group can be identified as influencing legislation, for example, less than 5 percent in the case of a New England organization, the Internal Revenue Service may rule that the group is not entitled to the tax exemptions Congress has seen fit to grant.

Faced with this dilemna, conservation organizations must restrict their educational activities because this tax exemption is vitally important in insuring contributions without which few natural history or conservation groups could carry on. Thus those sound reasons which prompted the Congress to grant tax exemptions to conservation groups are being defeated.

In the light of this unfortunate situation, Mr. Speaker, I am introducing today appropriate legislation to maintain tax-exemption benefits for nonprofit conservation organizations, presently entitled to such benefits under existing laws, even though some of their activities may include attempts to influence legislation. My bill would preserve for conservation groups tax benefits they now hold as distinterested spokesmen for the public interest in conservation matters.

The text of my bill follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 170(c)(2) of the Internal Revenue Code of 1954 (relating to definition of charitable contribution) is amended by adding at the end thereof the following new sentence: "The requirement of subparagraph (D) shall not apply in the case of any corporation, trust, chest, fund, or foundation whose principal purpose is to promote the conservation of natural resources in the United States."

SEC. 2. Section 501(c)(3) of the Internal Revenue Code of 1954 (relating to list of exempt organizations) is amended—

(1) by inserting "(A)" before "no part";

(2) by inserting "(B)" before "no substantial part", and inserting "(unless its principal purpose is to promote the conservation of natural resources in the United States)" after "the activities of which"; and

(3) by inserting "(C)" before "which does not participate".

SEC. 3. (a) Clause (ii) of section 2106(a)(2)(A) of the Internal Revenue Code of 1954 (relating to definition of taxable estate) is amended by inserting after "no substantial part of the activities of which" the following: "(unless its principal purpose is to promote the conservation of natural resources in the United States)".

(b) Clause (iii) of such section 2106(a)(2)(A) is amended by striking out "no substantial part of the activities of such trustee or trustees, or of such fraternal society, order, or association," and inserting in lieu thereof the following: "no substantial part of the activities of such trustee or trustees or of such fraternal society, order, or association (unless the principal purpose thereof is to promote the conservation of natural resources in the United States)".

SEC. 4. (a) Section 2522(a)(2) of the Internal Revenue Code of 1954 (relating to charitable and similar gifts by citizens and residents) is amended by inserting after "no substantial part of the activities of which" the following: "(unless its principal purpose is to promote the conservation of natural resources in the United States)".

(b) Paragraphs (2) and (3) of section 2522(b) of such Code (relating to charitable and similar gifts by nonresidents) are each amended by inserting after "no substantial part of the activities of which" the following: "(unless its principal purpose is to promote the conservation of natural resources in the United States)".

SEC. 5. The amendments made by the first two sections of this Act shall apply only with respect to taxable years ending on or after the date of the enactment of this Act. The amendment made by section 3 shall apply only with respect to the estates of individuals dying on or after such date. The amendments made by section 4 shall apply only with respect to gifts made in calendar years ending on or after such date.

"Dinner With Ike" Address of Hon. Theodore R. McKeldin

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND 1951–59, "DINNER WITH IKE," RIVERSIDE, CALIF., WEDNESDAY, JANUARY 27, 1960

In every presidential year a man who makes a party speech feels compelled, by custom if not by law, to make his address largely a recital of the triumphs of the administration, if his party is in power, or of the crimes of the administration, if it is out of power. But this year presents an unusual problem. Neither party is entirely in, nor entirely out, but half in and half out; and so it has been for 6 years.

In this unusual year, then, I propose to make an unusual speech, one that does not consist of a catalog of Republican triumphs, or of Democratic crimes for it is often the case that the overt acts of the administration, or of Congress, or of both, tell only half of the story of the times, perhaps much less than half.

Political whoop-la has its place in a campaign to stir up enthusiasm, but it is not with whoop-la that I propose to deal tonight. Rather, it is with the solid arguments of quiet and factual conversation.

For, proud as many of us are of the Republican Party and its accomplishments through the years, the tribute tonight is specifically to a man * * * a great leader of people, a great statesman in his own effective way, a great President of the United States.

For the party, there is glory enough in the fact that it gave to the country Dwight David Eisenhower.

For the times with which we have had to deal * * * and the conditions with which we have had to cope, we could have done nothing more magnificent.

There is precedence for this aptitude of the Republican Party to produce the man for a particularly trying—and especially dangerous—period of history.

Consider its achievements of exactly 100 years ago. Was all the legislation of the next 5 years, and all the administrative ability, and all the other services put together in one heap half as great a party triumph as having given the country Abraham Lincoln?

Do not misunderstand me. I am not trying to tell you that the modern President is another Lincoln, for the two men are different in many respects. But in one respect I maintain that they are exactly alike—each was the man for the times. Changing times call for men of different types, but the political party that presents to the country the kind of man that the times require has performed the greatest service that is within the power of a party.

I am not such a hidebound partisan as to denounce everything that was done in the 20 years preceding the first election of Dwight D. Eisenhower. They were extremely turbulent years, not in this country only, but throughout the world, and in such times a great many changes have to be made in great haste, which makes it morally certain that there will be great mistakes. So it was in the case of America, and yet, with all the mistakes, we made some definite and valuable political, social, and economic gains in that period.

But the more rapidly a country is advancing, the sooner comes the day when its first necessity is to pause, take stock, and correct the errors into which it is sure to have fallen. That is always a critical moment, for there are always those whose desire is to convert the pause into a retreat. It is extremely difficult to find a man with the rare combination of qualities required for that situation. He must be able to pause without taking a backward step. He must be ready also to move ahead when the time to move is ripe. He must be able to weed out errors without throwing away gains, and we have Scripture for it that to pull up tares without destroying wheat is an all but impossible task.

The first requirement, of course, is high intelligence, but it is only the first. Many a brilliant man would make a hopeless President. The second requirement is utter devotion to the country, but that is not all. There are sincere patriots who could not possibly lead the country anywhere except into trouble. The supreme requirement for such a situation as we faced in 1952 was neither brilliance nor patriotism, but the ability to command the confidence of the millions who must entrust their destinies to the President's hands. This elusive, indefinable quality Lincoln had, and Eisenhower has, and in that respect I do not hesitate to say that the Republican Party's gift to the country in 1952 is worthy to be compared to its gift in 1860.

Nor was this a service to the United States alone. After more than 30 years of practically incessant warfare—for even during the long armistice of 1919–39 there were small wars smouldering somewhere almost without cessation—the world was uneasily and laboriously adjusting itself to a new order when Eisenhower took the helm of our ship of state. It is impossible to overestimate the value, not to us alone but to all Western civilization, of having at the head of one of the two dominant military powers a man whose integrity was so far above suspicion that detraction itself could not attack it.

I hold high the values of diplomatic skill, of clever statecraft, of historical learning, of judgment of men, and all the other attributes that a successful political leader must have. Dwight Eisenhower is proficient in all of these. Yet when they have all been added together there is one thing bigger than the whole sum, and that thing is known to us by the one word "character." It is in this factor that the President stands head and shoulders above the vast majority of men in public—or private—life, and it is this that has given him the greater part of the power that he has wielded throughout the world.

I remind you that he, for 40 years a soldier by profession, and not only that, but one who in 1944 commanded the most gigantic assemblage of military power ever entrusted to a single officer, has for nearly 8 years exercised more power in the world than he had when he commanded the Normandy invasion, and that without touching the sword.

This is, I submit, one of the most remarkable records of all times, but it happens to have an illustrious precedent in American history. It is not the first, it is the second time that it has been accomplished in this country. At the very beginning of our national history, which was, like the present, a time of doubt, uncertainty, and difficult

adjustment to a new order of things, we raised to the highest office an American soldier who proved to be even greater in peace than he had been in war. But the solid rock on which this Nation was founded was not the intellectual brilliance, nor the profound learning, nor diplomatic skill, but the sheer character of George Washington

When one considers the magnitude of perils through which our country has been threading its way, it becomes evident that all the fine positive accomplishments of President Eisenhower are more than matched by his brilliant avoidance of appalling errors in the face of powerful forces that sought to thrust him into them. In a world bristling with hatred and suspicion, he did not lead us into war. In a world slowly recovering from the most damaging wars ever fought, he did not lead us into wild inflation. A wounded and outraged country, he did not permit to drift into ruinous self-pity and churlish solitude. Under severe provocation from an inveterate foe, he did not allow exasperation to betray him into rash action. Constantly harassed by those who foolishly dream of setting back the hands of the clock, he steadily required of America 20th-century action in a 20th-century world.

This is the leader who was the Republican Party's gift to the Nation at a critical moment in history. I do not say that it was the one greatest gift that a political party ever made. But I do assert that to find its equal, you must go back to Lincoln and Washington.

On that showing I am content to rest the party's case before the country and the world. Certainly there is plenty more to be said and in the course of the campaign it will be said; but all the rest is in the nature of what lawyers call corroborative testimony. The last, final proof of a party's value is not in its legislative brilliance, nor in its political skill. It is in the party's ability at a time of crisis to come up with a man with the qualities of mind and heart that enable him to meet that crisis.

Since no two crisis are ever exactly the same, a different type of leader is required each time. We did not need a Washington in 1860. We did not need a Lincoln in 1952. But we did need a Washington in 1789, we did need a Lincoln in 1860, and we did need an Eisenhower in 1952. The type of leadership required at any specific time is a detail. The test of a party is always to be ready with the man. The Republican Party met that test in 1952, which is its best possible claim to the confidence of the people.

And the leader of these momentous years is possessed of aonther magnificent gift * * * the ability to gather about him and to inspire other men of dedication, other men of faith in America and in the ways of freedom, other men who place the country above themselves * * * men, for example, like the late John Foster Dulles of cherished memory * * * men like Dulles' illustrious successor, Christian Herter * * * and men like the President's own partner in political campaigns and his aide and confidant in the complex affairs of modern government * * * RICHARD MILHAUS NIXON.

Yes, we have more than justified our existence as a political party and have established a valid claim to the trust of the people through the leadership that we have furnished to our country in times of past and present crisis.

And we are prepared to continue to do so in these times of continuing crisis.

As the campaign develops there will be time enough to go into secondary details. But at the start I maintain that we should go before the country reminding all Americans that today, as in the long ago, when the country faced difficulty and danger, we are the party that could and did bring to the conduct of public affairs one more warrior who is also "first in peace and first in the hearts of his countrymen."

Hazleton (Pa.) National Bank Celebrates Its 70th Anniverary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory from the Hazleton Plain Speaker of Monday, February 1, 1960:

HAZLETON NATIONAL BANK, FOUNDED FEBRUARY 1, 1890, IS CELEBRATING ITS 70TH ANNIVERSARY

The Hazleton National Bank is now celebrating its 70th anniversary.

Founded February 1, 1890, by an active and alert group of bankers and other businessmen, its growth over the years presents a cross section of the expansion and development of the city itself.

The original site of the banking house was on the south side of Broad Street, between, Laurel and Wyoming, almost opposite the present location at the northwestern corner of Broad and Laurel Streets. The site originally taken was the former location of the Hazleton Savings Bank, purchased by the Hazleton National Bank to house the new financial institution.

Twice the property was remodeled to accommodate the ever growing business of the Hazleton National Bank. The original side walls were retained through the two remodelings but Hazletonians remember best today the second alterations, vestiges of which remain in the front of the Singer Sewing Machine Co., which now occupies the premises vacated August 15, 1924, when the Hazleton National Bank main office moved into its present location.

FIRST PRESIDENT

The first president of the Hazleton National Bank was Augustus S. Van Wickle, coal operator, who produced anthracite at Milnesville, and at Coleraine in those earlier days.

The first vice president was Elliott P. Kisner, "sage of Kastanienwald," whose name lives in the first syllable of "Kis-Lyn" school created for delinquent boys as an outcome of the philanthropic activities. Mr. Kisner pushed aggressively through his long and busy life.

The original board of directors was E. L. Bullock, Beaver Brook coal operator; H. B. Conahan, hero of the Stockton mine disaster of 1868, prominent contractor, former select councilman and former city assessor; William Schwartz, leading merchant in those days; T. D. Jones, coal operator; A. M. Eby, civil war hero, who was cashier and secretary for many years; Elliott P. Kisner, E. A. Oberrender, of the Coxe coal mining official staff; A. S. Van Wickle, John E. Kern, prominent local resident; Dr. F. M. Brundage, Conyngham doctor who served as U.S. Consul to Aix La Chapelle, Germany; F. W. Cooper, son of a Harleigh coal operator; J. E. Roderick, State chief of the Bureau of Mines; Henry Knies, pioneer merchant; H. E. Sutherland, Hazleton stationer; A. M. Eby and William Lauderbach, founder of Lauderbach & Co.

EARLY DIRECTORS

From its inception, the Hazleton National Bank was fortunate in having the sound advice and business experience of leaders in the banking, industrial, and commercial life of Hazleton. Among those who served it as directors were Arlo Pardee, Philip V. Weaver, Dr. H. B. Casselberry, John G. Kirschner, J. B. Hutchison, A. F. Wendel, J. Elmer Jones, Dr. Harry Keller, I. P. Pardee, and James Lee Pardee.

When the bank building at Laurel and Broad Streets was occupied in 1924, the official setup was: president, I. E. Pardee; vice presidents, Frank Pardee and James Lee Pardee; cashier, Bert E. Kunkle; assistant cashier, H. J. Swettman; directors, Frank Pardee, I. P. Pardee, Harry W. Jacobs, Bert E. Kunkle, James Lee Pardee, Dr. H. M. Keller, George B. Markle, Jr., John H. Wettstine, Benjamin F. Morse, John W. Crooks, Patrick J. Fynn, and John F. Reed.

The bank was incorporated with a capital of $100,000, but this was increased on September 1, 1906, to $200,000, and on November 1, 1923, to $500,000. On November 16, 1959, the capital was increased to the present figure of $750,000. The State banking department authorized the Hazelton National Bank on November 27, 1916, to conduct a trustee business, qualifying it to conduct this important community service and thus equipping it to care properly for all the banking needs of the steadily growing community.

PRESENT OFFICIAL FAMILY

Main office:

James F. Koch, president.

Robert S. Gicking, executive vice president and cashier.

William L. Morse, vice president.

John P. Brew, vice president and trust officer.

James F. Koch, Jr., and Robert K. Gicking, assistant vice presidents.

Rocco D. Fescina, Wilson F. Hill, Edward L. Miller and Robert T. Wagner, assistant cashiers.

Arnold Krause, assistant trust officer.

Michael Tomasko, auditor.

West End Branch, Robert F. Schmauch, branch manager.

Leighton Branch, Allen S. Mertz, assistant cashier.

Weatherly Branch, Wilbur D. Nyer, assistant cashier.

Weissport Branch, L. A. Bisbing, assistant cashier.

The present directors are: John P. Brew, George M. Chisnell, Arthur B. Deisroth, John M. Dyson, George E. Freeby, Robert S. Gicking, Joseph J. Humphries, Mahlon M. Kistler, James F. Koch, William L. Morse, Thomas H. Probert, and John W. Reidler.

FINANCIAL GROWTH

In July 1890, the year the bank had been started the previous February 1, deposits were $223,000, and 6 months later they had increased to $590,000. In the next few years they grew to past the million mark reaching $1,070,204.89 on January 1, 1894. On January 1, 1904, 10 years later, the deposits had grown to $2,162,747. Again up to 1924 the deposits had doubled, being on January 1, 1924, $4,763,694.45.

On January 1, this year, the report shows deposits of $28,067,557, and total assets of $31,043,064. This total did not include $4,440,750, incorporate trusts and $13,635,107 individual trusts.

An Open Letter to President Eisenhower

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. RUTHERFORD. Mr. Speaker, it is the right of every American to petition the leaders of his Government in behalf of projects or causes in which he believes. Mr. Juan Rivera, Sr., editor of the International, a newspaper printed six times per year in Presidio, Tex., has recently written an open letter to President Eisenhower. The letter to the President was published in the International and gives the Chief Executive certain recommendations in connection with desired projects in Presidio. Although Mr. Rivera's paper has subscribers in many States, I am not certain it will reach the President's eyes. Therefore, in order that the letter to President Eisenhower may reach official channels, I ask unanimous consent to insert the letter at this point in the RECORD.

The letter follows:

AN OPEN LETTER TO PRESIDENT EISENHOWER

Mr. President D. D. Eisenhower, you as our great President of the United States of America, who has been liberal in giving aid to foreign countries and in helping them build their cities after the wars.

I request and ask you, why don't you appropriate some money and improve this forgotten village of Presidio, Tex., which is 200 years back of prosperity and progress? This village is not corporated so therefore there is no local government to find ways and means to improve this old Presidio village.

This village hasn't got any payroll, as there isn't any industry of any kind, farmers and merchants can't finance any project for the good of the village because they all are just making a living and paying taxes including myself.

For the sake and health of Presidio citizens, I request a sewer system and a potable water system. The citizens that are able to install their own water system has got their own sewers to cesspools in their yards and as the terrain is sand and gravel probably the cesspool contents are seeping through the sand direct to their water system.

Mr. President I also request to please appropriate some money so that an emergency hospital be build in Presidio because Presidio is 60 miles from the railroad and about 150 miles from the nearest hospital.

Mr. President, if you are continuing with your foreign aid program, please appropriate some money to Presidio so that a flood control can be build in behalf of the farmers whose cotton harvests are in constant danger of Rio Grande floods every year.

Presidio really needs some of that foreign aid money and can use it to great advantage especially on the projects I have mentioned above. You don't know the condition of Presidio village until you come and see for yourself or send down a committee of inspection.

Mr. President, I want to let you know that Presidio village is the poorest in the United States of America, but its citizens have been complying with every State, country, and county tax law. In spite that we all just work for a living.

In 1935 and during the depression period the WPA built roads and schools all over the country and not a cent was spent in Presidio village to build the most important projects for the health and welfare of its citizens.

So therefore, Mr. President, this letter is a petition in the name of Presidio citizens, farmers, businessmen and merchants, and I beg you to please appropriate some cash to build at least those necessary projects I have above mentioned without delay.

Wishing you grant my important request, I beg to remain as ever,

Your most loyal citizen,
JUAN RIVERA, Sr., *Editor*.

Happy Groundhog Day

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the Remington News Letter published by the Remington Arms Co., Inc., J. P. Linduska, editor, of Bridgeport, Conn., entitled "Happy Groundhog Day":

HAPPY GROUNDHOG DAY

Come the heat and drought of late summer, he dozes in the cool confines of his burrow. That's estivation—of a sort. The winter he spends in deep sleep. That's hibernation. And on his own day in February he reveals the nature of spring weather to follow. That's long-range prognostication.

"But the groundhog's more than a prize sleeper and prophet," says Joe Linduska, director of public relations and wildlife management for Remington Arms Co. "He's a liability and an asset, nuisance vermin and prized game, a builder of homes for indigent rabbits and a razer of homes for indignant vacationers.

First off, he's a topflight engineer and a soils expert of no small skill. It's not often you'll find a drowned-out woodchuck den. They pick their sites carefully—well-drained sidehills with a view. And where they have a choice, they select their soil type with even greater wizardry. In Connecticut, a survey of woodchuck excavations showed they were unerring in the selection of sandy loam. The accuracy of their judgment in this department was short of amazing since the area was a patchwork of soil types.

After deciding on the place, time is no problem to a woodchuck. He has all summer and digs a little now and again as his mood moves him. Some are shiftless and settle for basement apartments of utility size with a single opening. Others are like folks converting old barns. They add a room here and a door there with the result that some deep-down dwellings are elaborate affairs. In Michigan one excavated den had over 56 feet of tunnel and 5 entrances. Some go down over 6 feet but the average maximum depth is nearer 4 feet.

A little superstructure appears desirable with the result that brush piles are favorite spots for a tunnel entrance. Abandoned buildings the same. And summer cottages frequently turn up with adjoining basements that weren't in the plans.

Like country folks in summertime, the woodchuck has lots of company, too—except his come in the dead of winter. Skunks, opossums and rabbits aplenty all drop in. But the proprietor doesn't mind—in fact, he doesn't even know they're there. He's in deep sleep in private quarters sealed off from the den proper. His normally rapid heart beat (up to 200 per minute) is slowed to a chug—chug of 4 to 5 beats per minute. And his body temperature is reduced, too, from a normal 37° C. to 8. It all tends to conserve energy during the long 6-months sleep and abstinence from food.

Dig out a woodchuck den in winter and you're likely to find most anything—anything, that is, except the owner and regular tenant. The hibernating cell is so skillfully sealed off that it's seldom you can spot it from the main tunnel. But skunks you'll find, sometimes a dozen or more, huddled together in deep sleep. Mostly they're all females.

Rabbits, too, will take to "holing-up" in rough weather. In Michigan a study was made to determine the extent of den use by cottontails. Ferrets were run through 181 woodchuck burrows and rabbit occupancy was correlated with temperatures. Below 12° F. "holing-up" was three times as prevalent as at temperatures above this level.

In spring—even early February in some places—groundhogs begin to surface. They breed soon after emerging from dens and 31 to 33 days later, they have 4 to 6 young 'uns. They eat, and lie in the sun, and eat and eat.

They're not what you'd call fussy eaters and will try most anything green. Alfalfa, clover, dandelions and my cantaloupes are favorite foods. Most any garden vegetable suits them fine—even onions.

For a burrowing critter that spends more than half his life underground you might expect him to be ungainly on the ground. He's not. Like the overweight executive type, his gait's a little ambling. But he can make good time under pressure. And he can shinny up trees and do a fair job of swimming. I've seen them—of all places—sitting on a fence post. And this summer we thought we had a beaver in one of our duck ponds. It turned out to be a well-larded 'chuck leisurely paddling across the 10-acre pool.

More than any other animal, the groundhog has led to the development of that special breed of rifleman—the "varminter." In advanced classes of this select school the challenge lies not in numbers bagged but in 'chuck to rifle distance. The result is stalking in reverse.

Upon spotting his quarry, the purist walks or drives away from it until it all but fades from the naked eye. Then he hauls it back up with a 10-power scope, and with sandbags and careful reckoning of wind, trajectory and other variables he squeezes, hoping for that shot he'll remember. First it's 400 yards, then 450—500—.

On a first exposure to the sport, mine came last spring, 550 yards if a foot. For a week I was elated. Then questioning glances forced an exact measurement. Well, it was still enough to add a convert to the cult.

Mikoyan Will Like It in Cuba

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. PUCINSKI. Mr. Speaker, the following editorial, which appeared in the Chicago Sun-Times this morning, I believe is self-explanatory. I should only like to add this footnote.

It is indeed lamentable that Deputy Premier Mikoyan can now do his nefarious work in Cuba only because of the added dignity that he acquired when he was invited to visit the United States last year. I had warned in my maiden speech before this Congress that the United States was making a tragic mistake in gracing this Communist conspirator with dignity by arranging various receptions in his honor during his visit to this country. By its actions, the administration has virtually put itself in a "straightjacket" and can today hardly warn the Cubans against the high price they must ultimately pay for any cooperation with the Soviet rulers when the administration, itself, has dignified the Soviet rulers in our own country.

Perhaps Mr. Mikoyan's work in Cuba will open the eyes of the formulators of our own American foreign policy.

The editorial follows:

MIKOYAN WILL LIKE IT IN CUBA

Russia's deputy premier, Anastas Mikoyan, will feel very much at home on his visit to Cuba this week to open the Scientific and Technical Exposition. He will find the sovietization of the country proceeding at a pace rivaling that of Russia, itself, after the 1917 Revolution. Confiscation of private property is moving rapidly, and the nationalization of industry and agriculture is well underway. Thought police are being installed and the entire population is being urged to inform on nonconformist neighbors. Courts are being subverted to serve the political needs of the Castro dictatorship. What's left of the free press is being systematically hounded and bullied toward subservience.

Now, quite evidently, a new phase of the sovietization program is in the making—the forging of strong economic and cultural ties between Cuba and the Soviet Empire. Mikoyan, a leading Russian trade expert, will discuss increased commerce, and presumably the stepping up of the exchange of Soviet and Cuban technical personnel—a process already in active motion. Along with Mikoyan, trade missions from other Iron Curtain countries are arriving in Cuba with attractive mutual trade proposals.

Thus, the prospect of a new Soviet satellite 90 miles south of our continental borders increases day by day. Perhaps next week Prime Minister Fidel Castro will entertain the notion of building a few Red missile bases—say, where the U.S. naval base at Guantanamo now stands.

In the light of all this, President Eisenhower's policy of turning the other cheek for the sake of the Cuban people, becomes more difficult each day. The time is near when a total fresh look will be needed lest our concern for the Cuban people become as academic as our concern for the people of Russia has been for the past 42 years.

Major Coal Mining Operations at Dupont, Pa., Gives Way to Strip Mining

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was featured in the Dupont news section of the Pittston Sunday Dispatch of January 31, 1960:

STRIP MINING WIPING OUT LAST TRACE OF MAJOR COAL OPERATION—PENNSYLVANIA'S THOMAS SHAFT MADE JOBS FOR THOUSANDS FROM BOROUGH

One of the major mining operations, that employed hundreds of Dupont residents at its peak in the 1920's came to its end this past week after some 76 years of mining.

All the landmarks, buildings, and shafts and small gage railroads that were used for maintenance, repairs to mine cars and motors, and the transportation of coal from the mine to the breaker are completely gone from the area. The reason for their disappearannce was stripping work that began in the area this past week by the Kaminski Brothers Excavating Co., of Pittston Township.

The mining operation that disappeared from the scene last week was the Thomas Shaft Colliery of the Pennsylvania Coal Co., Dunmore. The colliery was located about one-half mile with the western boundary line of Dupont Borough, and will be remembered for a long time because at one time or another most everyone from Dupont who worked at mining worked at the Thomas Shaft Colliery.

PEAK IN THE 1920'S

Despite the fact that the colliery began operating sometime about 1884 it reached its peak production in the 1920's when it was estimated that some 2,000 workers were employed at the colliery with the majority of them from Dupont Burough. And to top it all 99 percent of the working force all worked steady day-shift. The other 1 percent can be accounted for by maintenance men who cared for mine pumps, firemen who attended the boilers in the firehouse, watchmen, and so on.

It was also estimated that the coal produced at the colliery and its subsidiary slopes amounted to nearly 5,000 tons daily, more or less.

SUBSIDIARY SLOPES

The colliery operated four subsidiary slopes that produced coal at full capacity in the 1920's, and employed hundreds of coal miners. The slopes were the Butler Slope, that was located some 2,000 feet west of the main mining shaft; the Pepe Slope, about 3,000 feet in a southeasterly direction from the main shaft; the Hennigan Slope, about 4,000 feet beyond the Pepe Slope in the same direction from the main shaft, and the Fernwood Slope, at New Boston Settlement.

All the slopes were served via small-gauge locomotive transportation that used two locomotives to transport the loaded and empty mine cars between all slopes of the colliery. The locomotives also supplied cars for the sandpits that operated in the Ziegler Grove area of Dupont.

Today the area around the old Pepe Slope is a built-up area and is occupied by the Comerford Outdoor Drive-in Theater, Charles Vullo Recapping Co. and the Custard Bar on route 315, better known as the Dupont-W.B. Highway.

The Old Hennigan Slope is covered by the Pennsylvania Turnpike right-of-way and its toll gate. The Fernwood is also covered by the turnpike right-of-way.

The Pepe Slope was last operated by the late Peter Minchello of Pittston and was abandoned in the late 1930's. The Hennigan Slope was last operated by the Volpe Coal Co. and was also abandoned in the late 1930's. The Fernwood Slope, last operated by the Sussex Coal Co., was also abandoned in the late 1930's. The Butler Slope was last operated by Barney Guzior Coal Co. and was abandoned just about 1 year ago.

LARGE UNDERGROUND AREA

Some of the mine chambers and heading roads in the mine workings were driven for miles in all directions. One particular road that travelled the longest distance in the Thomas Shaft working was Miller's Heading, driven by the late George Miller Brostowski of McLean street, Dupont. Miller's Heading began off Rock Plane and went in a westerly direction for 2 miles more or less. Some of the workers that walked Miller's Heading to get to their mine chambers say that they used to work under Yatesville Borough. Miller's Heading ended at Maryland Plane Slope. This Maryland Plane Slope had eight lifts or heading roads off in a left direction which were called the Balcony Road; Graveyard Road; Barber's Heading; Molley's Airway; Stanzaks; No. 6, 7 and 8 lifts, and all were driven for nearly another mile in a left direction. It is small wonder that the mineworkers of the shaft called it the Maryland Section of Thomas Shaft; with supplies on the miner's back it was like walking to the State of Maryland.

OTHER HEADINGS

From the shaft other roads led to Old Boston, the Creek section near the old Florence Colliery in Dupont, and to Jenkins Junction in Jenkins Township. The main heading leading to Old Boston and Jenkins Junction was called Ferrick Road and the heading leading to the Creek section was called the Creek Section Heading Road. The Creek Section was considered a prize section to work in. In the Creek section the late Tony Rose Adonizio got his first mining contract, and from there went on to form his own coal company.

UNDERGROUND MULE BARN

Not far from the shaft in a southern direction the mine had an underground mule barn where the mules were rested, fed, and watered before starting a new day of work hauling coal. The mules were only taken from the mines when they were hurt, or during a long period of idleness, or other restoration purposes as defined by the barn boss. When the electric mine motors started to replace the mules for hauling the mules were removed and sold and the mule barn was converted into a sanding and drying plant and motor barn.

MINE FOREMAN'S OFFICES

On many occasions in the past you may have heard someone wise crack that he was looking for a job washing windows in the mines. Well this occupation could have been fulfilled at the Thomas shaft, for the mine foreman's offices in the mines had many windows in them. Why they were put in it would be hard to say, but they were there. The mine foreman's office near the shaft was constructed from red brick. And all the mine roads or tunnels near the shaft were plastered with concrete and were whitewashed, and gave the appearance of subway tunnels in New York City.

OUTSIDE BUILDINGS

Getting back out from the mines, the outside buildings were kept immaculately clean, including a well-cut lawn with many flowers and shrubbery.

The main office building that was used by the mine superintendent employed around 20 clerks, whose occupation was preparing the mine payroll and other records of mining, had a lawn with flower beds trimmed and marked off with whitewashed rocks. The lawn had a 60-foot flagpole where Old Glory waved every day. The roads around the colliery and the road leading to Dupont was graded well and was covered with neat red ashes. Other buildings that were near the shaft were the electric shop, dual shifting shanties for the miners, a large car-repairing shop, a locomotive barn, dynamite supply houses, fan houses, and three engine houses.

All in all, the operation looked like a good-sized community.

FAMOUS BASEBALL TEAM

The Thomas Shaft Car Shop had a famous baseball team in the twenties. The team had a baseball field near the car shop and practiced daily during the lunch hour. The team featured Johnny Hughes, Tosh Mullins, Ernie Cochrane, Birdie Stahl and others.

Also located on the premises near the Thomas Shaft was its own reserve water reservoir—and it contained fish. Many of the local boys, who drove cows in the area, spent their time fishing and swimming at the water reserve when their cows were grazing in the pastures nearby.

Also located near the shaft was a large mule barn building, loading ramps and storing platforms for heavy equipment and motors. Fire hydrants with sheds built around them were at various locations.

OTHERS ALSO GONE

Other major mining operations that completely vanished from Dupont borough during the last 30 years were the "Big Shaft" of the Lehigh Valley Coal Co., between the Laurel Line tracks and the D. & H. Railroad, and the Florence Coal Co. that was located at the site of the Dupont Little League of today.

Looking at the site today one would never know that a major colliery once operated there. They would never dream that once upon a time the site was a thriving industrial operation for mining anthracite.

Whether it be man marches on or time marches on, regardless of who marches on the major coal mining operations of Dupont are gone. They are no longer with us—only the history remains.

Education and Adm. Hyman G. Rickover

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. THOMPSON of Texas. Mr. Speaker, the Galveston (Tex.) Sunday News of January 31 carrier a thoughtful editorial which concerns our educational system in general and the opinions of Vice Adm. Hyman G. Rickover in particular. As a reflection of local interest and sentiment the editorial is worthy of close study and attention by the Congress and by others who may have a part in shaping the destinies of the youth of our land.

The editorial follows:

VOICE IN THE WILDERNESS

The many public declarations of Vice Adm. Hyman G. Rickover, "father of the U.S. atomic navy," on what he considers deficiencies in our country's education system have not been widely heeded by school authorities and the Nation at large.

Chosen as a member of the entourage of Vice President RICHARD NIXON on a visit to Russia last year, Admiral Rickover made some keen observations of the education systems in Russia and the satellite captive nations.

Already aware of the fact that the school systems of the advanced nations of Western Europe are far ahead of American schools in the basic studies of the arts, sciences and humanities, the admiral reported some startling news about the thoroughness of Soviet education in such fields as science and languages.

Rickover's report at first was widely hailed in America as highly worthy of note and it seemed for a time there would be swift action leading to corrective measures.

More recently, the admiral has observed that there has been no appreciable corrective action toward strengthening American education, particularly in the public schools.

He attributes the weaknesses in our system principally to nonacademic school activities such as sports and "made" teacherships in other fields that have little bearing on training the mind and equipping students with basic academic knowledge.

Admiral Rickover feels that the quickest approach toward strengthening our schools would come through the establishment by the Federal and State governments of permissive educational standards.

He points out that we have such standards for foods, drugs, cosmetics, communications, tobacco and liquor, railroads, airways, etc., so why not have them for education, which is vital to all progress and security?

Like so many progressive movements, educational progress stems from needs and demands at the grassroots. Once our Government leaders realize that our people will not remain satisfied to see our schools lagging behind those of other advanced nations, State and National permissive standards for education are likely to come into being.

One logical approach in strengthening the Nation's educational efficiency and prestige would appear to be through the organization of Rickover Education Clubs across the Nation. By working closely with PTA, other educational and civic groups, and with school officials, these clubs likely could bring the admiral's message to the action level.

Since there can be no solid refutation of Admiral Rickover's views and observations, it is high time they be heeded with a minimum of delay.

This keen Navy officer's genius as a practical scientific educator, organizer, and man of action are a matter of record. Let not his voice be that of one crying in a wilderness.

A Growing Sense of Partnership

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. ROBISON. Mr. Speaker, one of the basic strengths of a republic is the privilege of self-criticism enjoyed by its citizens. The ability to be objectively self-critical is as important to a nation and to its growth potential, as it is to an individual. So it has been proper, as I see it, for many of us to have been vocally concerned with what has been described as the strange sort of apathetic torpor that seemed to affect all 179 million of us Americans when first faced with the growing challenge of worldwide communism. It was almost as if we were all modern-day Rip Van Winkles, little caring that we were out of step with the times.

However, at the same time, I have been delighted in recent days to see the President so clearly point out the dangers of slipping from a mood of national self-criticism into one of national self-flagellation. We must never underestimate our strength nor our abilities, especially when that strength and those abilities are again channeled into the deep-flowing stream of a national purpose that finds its source in the creativeness and industry and spirit of a free people. So, it has seemed to me that, despite the continuous breast-beating of those whom the President called "political morticians," there is a steadily growing national awareness, beginning with the visit here of Khrushchev, of the true and serious nature of the Communist challenge, and of the resulting demand on all of us to respond, with the best that is in us, to the great motives for partnership that such challenge calls forth.

Secretary of Labor James P. Mitchell remarked, at about the time of the steel settlement, that, "It has always been the pride of our people that we have been worthy of freedom." There is much food for thought in Mr. Mitchell's phrase, and I have hoped, with him, that out of the bitterness of that recent economic struggle both labor and management could somehow find the inspiration to seek new and better lines of communication with each other, in answer to one of those "motives for partnership" that I have just mentioned.

Accordingly, I have been pleased to note that certain construction employers and the heads of unions representing some 3 million building-trades workers are presently meeting at Bal Harbour, Fla., for the purpose of drawing up a tentative plan to bar all strikes in this multibillion-dollar industry. By working together, they hope to end the tremendous waste that has resulted in recent years in the halting of projects ranging from huge industrial plants to small homes by a succession of strikes involving one after another of the 18 construction unions. I do not know, of course, whether or not such a voluntary plan can be worked out but, if it is, it would be the longest step yet taken in any industry toward the type of labor-management cooperation long advocated by the President and Mr. Mitchell as a means of establishing industrial peace. So, despite the chill Washingtonian winds, my hat is off my balding head to the men meeting in Bal Harbour, Fla. May the balmy breezes there fan this spark of cooperation into a real fire of partnership that spreads across the Nation. This is the sort of thing so many of us here have been waiting and hoping for.

Returning now, Mr. Speaker, to my earlier thoughts about the dangers of a mood of national self-flagellation, under leave to extend my remarks, I include the following editorial from yesterday's Wall Street Journal.

"ONCE IN A WHILE, REMEMBER—"

Twice within the past week President Eisenhower has remarked on a curious mood that so often overtakes this country. The ease with which we seem to pass from self-criticism into self-flagellation.

The President was speaking only of the missile program when he observed that we all shouldn't bow our heads in shame because achievement has not met every aspiration. The failures all acknowledged, there are still many accomplishments to be proud of in our brief 5 years of space exploration. But later he referred again to political morticians who exhibit breastbeating pessimism about the American system.

"Once in a while," he remarked, "we ought to remember that our country is not asleep, that it is not incapable of doing things."

Mr. Eisenhower, we may be sure, was not suggesting that the American people eschew self-criticism and relax in pious self-satisfactions; that can be insufferable in an individual and fatal to a nation. But so can morbid preoccupation with shortcomings.

Take the missile program, specifically. No one pretends, least of all Mr. Eisenhower, that it has accomplished every objective or denies that in some aspects it lags the Russian program. Insofar as this is a spur to effort, the criticism is both wise and necessary. But it is also wise not to forget what we have accomplished in much less time than the Russians. To forget that risks seriously misjudging what to do next or, worse, sinking into defeatism.

Or consider the recurring attitude toward our economic problems. That we could use more and better schools, hospitals and houses is true; so it is too that we ought to strive to grow, to remove the last pockets of poverty, to increase the material well-being of the whole country. But to listen to the constant laments about our inadequate growth rate, our substandard houses and our shortages of hospitals, the unwary might suppose that our whole economic system was a failure.

Surely once in a while we need to remind ourselves that if some houses are substandard it is America that has set the high standards; over the greater part of the globe our poorer houses would seem like palaces. To the whole world our growth rate, about which we bicker over percentage points, is a marvel and an aspiration. If anyone doubts it, let him imagine the gates opened to all who would come from the socialized nations of the world, including Russia.

And while we concern ourselves, quite properly, with the distance by which our achievement of equal opportunity for all may fall short of what we wish it to be, is it remiss to look with pride on the record of what we have actually accomplished? The truth is that those who belong to minority racial groups or minority religious groups, all around the world, look with envy at the political, economic, and social freedoms which we here take so for granted that we deplore the least infringement of them.

If we forget these things sometimes in our desire to reach higher, we not only do ourselves injustice. We also can do ourselves injury.

For one thing, a man overcome by feelings of inadequacy is an ineffective man; if, as a nation, we speak only of failure, others will come to accept our own valuation. And in that part of the cold war which is the struggle for men's minds it is as important that we not underestimate our strength as that we not become overprideful.

There is something else, more insidious. For if we let ourselves be blinded to all but failures and shortcomings, then by slow degrees we may come to think the American system, political and economic, is itself a failure. There are, indeed, those already who would have us think so; who point incessantly at what we have not yet achieved so as to persuade us to adopt other ways of ordering our economy and our society.

One of the things, surely, that has made this country is our capacity as a people for self-criticism. But surely, too, self-criticism includes the vision to see the accomplishments of America and why they have become the goals of other people. Once in a while, at least, we ought to remember.

Bart Greene

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. FARBSTEIN. Mr. Speaker, more than 200 persons, many of them colleagues of Bart Greene at the Department of Water Supply, Gas and Electricity of New York, gathered on January 28 at the Hotel Shelburne, New York City, to pay tribute to Bart Greene, chairman of the License Bureau, upon his retirement from civil employment after nearly a half century of dedicated service. Noted public officials from each of New York's five boroughs were present to felicitate the guest of honor. Mr. Greene is a native-born East Sider and resides in the 19th Congressional District of New York.

I am pleased to insert in the RECORD one of the tributes paid to him on the occasion of his retirement:

BART GREENE

(By Harry H. Schlacht)

It was an Irish poet who once said, "A man with a vision shall go forth and conquer a crown."

Great indeed was the crown that was conquered by the Irish, who not only had the vision, but were the doers of deeds—men and women who had the courage born of faith and faith born of courage to make these dreams come true.

Humbly born on the East Side, Bart Greene, this Irish lad without advantages, but his own natural talents, stimulated by the spur of necessity, he rose to become an outstanding public servant.

Like the chorus of a mighty hymn of praise, it is gratifying to hear the granite words of loyalty, honesty, friendship, and humility voiced at this luncheon tribute in honor of Bart Greene.

These words come neither accidently nor incidently to a man of quiet goodness and sturdy faith whose many years of dedicated service is molded into the consciousness of his colleagues who love and honor him.

Bart Greene has just completed nearly a half century of public service.

How modestly, how patiently, he gave himself to all kinds of activities. To all he consecrated a ripeness of his spirit and wisdom.

No one loses by selfless service. As one candle lends its light to another, losing none of its luster, so those who serve unselfishly never lose in so doing.

It was from his Irish parents that he derived that glow of spirit and beauty of temperament that is so unique.

It is difficult within the limitation of a brief address to unfold the many facets in his career.

Whether we regard him as a sailor with a distinguished record on the U.S.S. *Kentucky*, as electrical instructor, as chairman of the license board, his record furnishes us with an example for emulation.

Bart Greene, your retirement is a loss that is shared by all of us. You are an inspiration to every man and woman in our department. You have brought honor to your city, and our city honors you.

May you enjoy many fruitful and healthful years. May your days be happy ones. May the spirit of friendship always be with us.

May I conclude with an ancient Irish prayer: May the road rise to meet you; may the wind be always at your back; may God hold you always in the hollow of His hand.

John W. Kemp, Wisconsin's Candidate for President's Trophy to Handicapped American of 1959

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. REUSS. Mr. Speaker, John W. Kemp of Milwaukee has been nominated by Wisconsin to receive the President's trophy as the "Handicapped American of the Year" for 1959.

The scope of John Kemp's activities, the list of his achievements, and his record of public service indicate that he is a vital, energetic citizen whose many accomplishments would seem to disqualify him from any competition to select a handicapped person.

Mr. Speaker for the last 8 years John Kemp has been confined to a wheelchair battling the progressive paralysis of multiple sclerosis—a handicap that began in 1942. Not only has he refused to allow multiple sclerosis to become a serious drawback in his own life, he has devoted tremendous energies to establish rehabilitation services and employment opportunities for others who are handicapped.

The establishment of both an intensive inpatient rehabilitation program and outpatient clinical facilities for Milwaukee multiple sclerosis patients resulted from Mr. Kemp's determined efforts and service on the Community Welfare Council and associated Red Feather agency committee assignments.

Mrs. Lucille Uhlig, executive director of the Multiple Sclerosis Society of Milwaukee, Inc., told me that John Kemp is "an inspiration to those of us working daily with the handicapped, to patients who know him, and, should he be selected for the President's Trophy, his story and sparkling personality would rightly inspire all others across the States."

I agree completely with Mrs. Uhlig. It is my sincere conviction that the President's Committee on Employment of the Physically Handicapped could find no better candidate than Mr. Kemp for the trophy which President Eisenhower will award May 5.

To conclude my remarks I offer for the RECORD a brief history of John Kemp's wonderful life story:

PROFILE IN INSPIRATION

John W. Kemp is assistant cashier of the Marine National Exchange Bank of Milwau-

kee, third largest bank in Wisconsin. He is also personnel manager of the Marine Bank and the Marine Corp., a holding company of five banks with the Marine Bank as principal member. He started at the Marine fresh out of high school as a messenger boy in 1934. For the last 18 years, since 1942, Jack Kemp has been handicapped by multiple sclerosis. For the last 8 years, he has been confined to a wheelchair.

Jack Kemp—now 44, married and the father of an 18-year-old daughter—was born in Sioux City, Iowa in 1915. If there is such a thing as the all-American boy, Jack was it. At West Allis Central High School in West Allis, Wis., Jack was president of his senior class, president of the glee club, member of the student council, star basketball player, you name it.

From high school, he went right to work as an executive trainee at the Marine Bank. While progressing through various departments of the Marine, Jack continued his education. Four years of business law, economics and accounting at the American Institute of Banking. Five years of accounting, economics, business management, psychology and psychological testing at the evening division of Marquette University.

Even though he was already a victim of multiple sclerosis, Jack became personnel manager of the Marine Bank in 1947 and was named an assistant cashier in 1954. Since the Marine Corp. was organized a year ago, he has been supervising personnel relations for all five member banks.

If businessmen have any doubt about employing the handicapped, let them consider the case of Jack Kemp. As personnel manager of the Marine Bank and the Marine Corp., he and his staff are responsible for the personnel functions of a group of over 500 employees. His duties include evaluation of departmental job needs, interviewing, personnel selection, training, salary administration, recruitment, administration of fringe benefits and health services, supervision of recreational activities and personal counseling.

What do these duties include specifically? Here are a few examples.

Jack's department faces the problem of understaffing and overstaffing. Growing departments—like the Marine's installment loan department which has tripled in size in the last 3 years—need enough good manpower to serve the public well. Jack supplies it.

Jack and his staff sift through over 600 applicants a year to fill some 60 jobs.

Jack's office gathers detailed information of the requirements of over 500 jobs—from executive offices, tellers, bookkeeping machine operators, secretarial and clerical help, janitorial personnel, to advertising, public relations, installment loan, mortgage and commercial lending officers—then fits the right person in the right job.

Jack supervises some 50 group training sessions a year at all levels, plus individual training sessions in specialized cases.

Jack's group evaluates each employee's performance at least once every 6 months, recommends merit salary increases within each job's salary range, recommends and acts on promotions.

His office maintains constant contact with colleges and universities to attract good young people to the Marine. Jack even makes field trips to colleges and universities interviewing likely prospects on campus.

The department manages the Marine's pension plan, group life insurances, group hospitalization and management's profit sharing plan.

Together with his staff, Jack runs Christmas parties, golf outings, and picnics at the drop of a hat.

Jack himself gives the benefit of his own understanding of problems—some trivial, some serious—to all those who ask.

The Marine Bank and the Marine Corp. are indeed fortunate to have Jack Kemp as their personnel manager. What's more, they know it.

This big a job, this much responsibility, might be enough for an ordinary man. But the word "enough" is not in Jack Kemp's dictionary. He devotes himself to extracurricular activities, to civic affairs, and community service with the same zest and enthusiasm that he gives to his job.

Since 1950, Jack has been chairman of the community chest campaign at the Marine Bank. In the last 9 years Jack has played a leading role in Marine contributions of $54,168 to the community chest. For the last 6 years the Marine Bank has been the first of over 3,500 Milwaukee companies to report over-the-top contributions.

He is presently a member of the community chest's budget committee, and is a regular campaigner for the American Red Cross. He has also worked for the Boy Scouts of America, the YMCA, and the March of Dimes.

Jack has been a member of the Kiwanis Club Speakers' Bureau for the last 2 years.

He is a past president of the American Institute of Banking, Milwaukee chapter, of which he is still an active member.

Jack is a member of the National Office Managers Association and has served on all of its committees during the past 6 years.

He headed the only fundraising campaign ever run in Milwaukee for multiple sclerosis. The campaign raised $40,000.

Currently Jack is vice president of the Multiple Sclerosis Society of Milwaukee—an organization with some 600 members. It's a good bet he'll be president next year.

If anything, multiple sclerosis has made Jack Kemp give more of himself—rather than less—to his company and to his community. But how does multiple sclerosis affect him personally, what is its effect on him physically?

Doctors diagnosed Jack's difficulty as multiple sclerosis in 1942. As the disease progressed, Jack went from one leg brace to two leg braces to canes. By 1948, when walking a block was all he could do, Jack went to Kabot-Kaiser Institute in Vallejo, Calif. He spent 9 months there.

"Physically, my stay at Kabot-Kaiser Institute did a lot for me," Jack says. "When I got back I could walk 15 or 16 blocks and I did it religiously every night.

"Mentally, I profited even more. When you see 150 people in all stages of multiple sclerosis—some even stretcher cases—you get an appreciation of other people's problems that lasts all your life. You find you just can't feel sorry for yourself."

That attitude is typically Kemp. He never takes credit, for the way he lives his life influences others. Instead, he prefers to give credit to others.

One of Jack's legs was always better than the other, but in 1952 he sprained the good leg. That put him in a wheelchair—and though the wheelchair has been a part of him ever since, it has not prevented Jack from enjoying the good things of life.

Jack and another bank employee drive to work together. Jack drives 3 days a week, his partner 2 days. He even drives on lengthy vacation trips, and people who drive with him had better be prepared to do 600 miles a day.

Jack fishes every chance he gets, and has a stack of pictures to prove the big ones don't get away.

He goes to every Marquette University basketball game at the Milwaukee Arena. He parks his wheelchair right back of the scorer's table, and cheers as loud as any student.

Jack sees at least half of the 77 home games the Milwaukee Braves play every year. And he manages from the grandstand just like everyone else.

Jack gets in and out of his car by himself, gets in and out of bed by himself.

"About the only thing I can't do for myself," he says, "is go up and down stairs."

He does push-ups on a wrestling mat in his home every night, and his appearance attests to his excellent physical condition.

Jack readily shows you pictures of his attractive wife, Bernadine, and his 18-year-old daughter, Jeanne—now a student in the School of Nursing at Marquette University—and he makes no attempt to mask his pride.

If this reads to you like the story of a regular guy, the kind of man you like to be with, the kind of man you like to meet for lunch, swap stories with, play poker with, trust with your secrets, call on for help—then you have gotten to know Jack Kemp. For Jack Kemp has never traded on his handicap. He seems so totally indifferent to it, that people who meet him and know him are hardly aware of his wheelchair.

True, Jack Kemp has multiple sclerosis. But Jack Kemp does not have a handicap. Ask anybody in Milwaukee. They'll tell you Jack Kemp is a man's man, who does most things better than most men.

Fidel Castro—Communism's Friend

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. RIVERS of South Carolina. Mr. speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an editorial by the distinguished editor of the Charleston News and Courier, the Honorable Thomas R. Waring, on Castro—Communism's Best Friend in the Western Hemisphere:

[From the Charleston (S.C.) News and Courier, Jan. 29, 1960]

A BAD NEIGHBOR

The U.S. State Department, which lavished sympathy on Chinese Communist "agrarian reformers" in the 1940's, is characteristically reluctant to challenge Cuba's Red regime.

Constantine Brown, syndicated columnist, has commented: "The State Department's diplomatic strategy seems to consist of what the French call 'cherchez midi a quatorze heures' (look for noon at 2 p.m.). That is to say, 'Do tomorrow what should have been done day before yesterday.'"

Barron's, a national business weekly, has added its voice to criticism of the State Department's policy on Cuba. It speaks of "the footless behest of the State Department which abhors any show of strength" as being the cause of the President's failure to act against Castro.

Perhaps the President believes he should not appear belligerent on the eve of his Latin American tour. If this is the case, we believe he is mistaken. No Latin American nation champions Castro's cause. Several of our good neighbors have asked for shares of the sugar quota Cuba now enjoys. The most damaging action the United States can take is to treat a bad neighbor as if it were a good one.

If Mr. Eisenhower hopes that the small nations of Latin America will rescue the United States from Castro, he misunderstands Latins. Living in a masculine culture, they admire boldness and strength. Latin America will not respect the United States if it behaves like Ferdinand the Bull.

Bobby Burns and Alex Duncan

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. PHILBIN. Mr. Speaker, I am honored indeed to ask unanimous consent to revise and extend my remarks and include therein an excerpt from the Clinton Daily Item entitled "In Honor of Burns' Birthday," written by my dear friend, Mr. Alexander Cameron Duncan, past president of St. Andrews Society, Clinton, Mass.

Mr. Duncan is a venerable and loyal citizen, a great American, who for many years has served our country with dedication and fidelity.

His unfailing remembrance of the birthday of the great Scottish Bard, Bobby Burns, is a source of inspiration to his many friends and his interesting remarks on the occasion invariably strike a note of appropriateness and lofty philosophy that deeply touches and impresses those privileged to read them.

Contemporary America could learn much from the homely, down-to-earth philosophy of Bobby Burns and the solid, deep-rooted, loyal citizenship of Alexander Cameron Duncan. I congratulate Mr. Duncan upon the splendidly written and impressive tribute to Scotland's illustrious poet, and wish for him many more years of good health and happiness and dedication to the immortal Burns. If we had more Alex Duncans in this country and world today, unalterably dedicated to the perpetuation of freedom and individual liberty, the cause of enlightened, democratic government would be much the better for it.

The article follows:

[From the Clinton (Mass.) Daily Item, Jan. 9, 1960]

IN HONOR OF BURNS' BIRTHDAY

To the EDITOR:

At the risk of being accused of overstatement, I shall say that Scotland is the most fanatically democratic of all the democracies. Her fight for independence, begun under Wallace in the 13th century, finally succeeded under Bruce at Bannockburn in 1314. But it was not until John Knox cried out for the soul of Scotland that Scotland's true democracy flourished. When the Reformation took hold on the Scottish spirit, nothing could shake it. With the Kirk the school stood open to the humblest child in the land. The ploughman's son and the weaver's daughter were entitled not only to the Word of God in the common tongue, but also to the knowledge of the ages. Free education during the week and free worship of God on the Sabbath. These were the twin rights claimed by Scots for themselves and for their children. To defend them, they were not afraid to die. No wonder the heather is red—it was enriched by good blood.

There are valleys and glens still echoing the strains of the Psalm times beloved by all Scots. Scotland has always been characterized by a sturdy independence of spirit. Her cities and towns are still ruled by a town council. The citizens elect their own representatives. There could be no such thing in Scotland as a political machine.

The Scots have been at war off and on for 600 years, and the military tradition is still strong, especially in the Highland district. He would be a poor lad in the Highlands were he not at least a member of the Territorial Army. It is here that the Argyle and Sutherland Highlanders are recruited, and the Gordons, the Seaforths, the Camerons and the Black Watch battalions. Scotland abounds in military traditions. Her regiments are old with glorious histories.

But Scotland is more than the kilt, the bayonet, the bagpipes, Edinburgh Castle, and the 51st Division. Other traditions are just as strong and just as noteworthy.

In the Old World there is not another single region of comparable size that produces so many ships of such deadweight tonnage as the Clyde. "Clyde-built" has been a synonym for the best in shipbuilding. The shipyards of the Clydeside are busy now contributing to the United Nations much-needed tonnage for the transporting across the seven seas.

The Scot believes in God, in a God who will not do for him what he can do for himself. The Scot is willing to fight for principles, never weary in arguing about the rights of common man. He believes in these rights. He has fought for them in the past and he is willing to fight for them any time they are in danger. Every man is entitled to a fair chance. That is the Scottish creed.

Scotland is a small country, and in resources not a rich one. Because of lack of opportunities at home, her sons and daughters have left her shores to seek their fortunes elsewhere. They have been a source of strength to every land which received their allegiance. To give assistance to Scottish immigrants in need the St. Andrews Society was formed. But this love for the homeland has remained constant in the hearts of all their descendants, even in the remotest corner of the earth. As coals on the hearth need company if they are to retain their glow, so Scots need at times to brighten the glow of their affection for the homeland and for each other by the warmth of companionship.

And so it is that on St. Andrew's night they join together for this purpose, and Scots everywhere offer a prayer to God that He will bless and nourish the land which gave them life, as they nourish and defend the lands where they dwell.

ALEXANDER CAMERON DUNCAN,
Past President, St. Andrews Society.
CLINTON.

Desecrating Houses of Worship

SPEECH
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. DERWINSKI. Mr. Speaker, the unanimous concern of the House with the wave of anti-Semitic actions which have erupted in various parts of the world in recent weeks signifies to all nations the determination of Americans to prevent a development of any organized antireligious spirit. It has become evident to all of us that many of these demonstrations have been the result of irresponsible young people and lunatic group followers who have defaced synagogues, churches, institutions, and private homes with symbols of hatred.

We stand together to deplore any further development of these acts; however, we must point out the rather obvious fact that diabolical Communist influence could very well be responsible for these international incidents. Only international communism has the worldwide organization capable of producing these incidents in widely separated corners of the globe.

Mr. Speaker, certainly any revival of nazism that might be traced at this time must be immediately stamped out. As Americans, we want all the world to know that we will not tolerate any revival or resurgence of nazism, and furthermore we are giving demonstration to the world of our solidarity in opposing anti-Semitic feelings and, for that matter, attacking all trace of bigotry and intolerance.

The Fear of Dislike

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks, I am including an editorial which comments on a recent statement of Congressman H. R. GROSS, of Iowa, on what he called the growing cult of fear of being disliked.

The editorial appeared in the Evening World-Herald of Omaha, Nebr., on Saturday, January 30, 1960, and read as follows:

THE FEAR OF DISLIKE

In a recent letter to his constituents, Congressman H. R. GROSS, of Iowa, deplored what he called the growing cult of fear of being disliked.

Mr. GROSS said this cult has its roots in the State Department. He said that an example of its strength is the definite move on the part of the State Department and others in Washington to yield to the mob demands and permit the flag of Panama to fly with the Stars and Stripes in the Canal Zone.

The Uncle Sam whom the world once knew and respected was a tall man in a high hat and striped pants, whose facial expression tended to severity. He minded his own business, and expected the rest of the world to do likewise. He didn't look as if he were trying to win a popularity contest.

That Uncle Sam was a greathearted man. The rest of the world knew he could be counted on any time there was a genuine need for help. It also knew that he could spot a phony or a blackmailer two oceans away, and for that it respected him.

Says Congressman GROSS:

"The wreckage of history is well marked with the tombstones of governments whose leaders suffered from the fear of being disliked. Let us be just and honest with Panama and every other nation, but let us yield not 1 inch to those who attempt to do violence to our sovereignty and self-respect."

We imagine the big majority of Americans will buy that.

Speech of Congressman Lane Before Revere (Mass.) Golden Age Club

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my speech before the Golden Age Club of Revere, Mass., on Sunday, January 31, 1960:

For thousands of years, man has considered it to be both a duty and a privilege to respect and protect the aged.

That is until the coming of the factory system, with its emphasis upon production to the exclusion of everything else.

When a person was unable to produce, due to disability or age, society promptly abandoned him and tried to salve its conscience by accusing him of failure to provide for a rainy day.

The wealthy of those days who had fattened on the labors of the average worker without thinking of their obligation to arrange for some form of security in return were slow to learn.

The serious and prolonged depression of the 1930's which threatened the very existense of our free enterprise system, shocked the Nation into action.

It was recognized that a week's pay alone was not sufficient compensation for a man's labors.

Something else was needed to provide income during periods of unemployment and disability and during old age.

It was then that the concept of social insurance became more than an academic question.

The depression taught us that no society can survive with millions of unemployed and millions of old people who are destitute of income.

Neither the WPA nor the municipal welfare programs, with their meager benefits financed entirely out of public revenues, could solve the problem.

Even business and industry began to see the light. When many millions of people are unable to buy, the economy as a whole is bound to suffer.

To remedy this situation, the Congress worked on social insurance legislation to be financed through taxes levied on the employer and the employee that would provide a modest but steady source of income to people after their working years were over.

By the broad term "social security" we mean such varied programs as aid to the blind, aid to dependent children, unemployment insurance, old-age assistance, and old-age and survivors insurance.

In speaking to the members of the Revere Golden Age Club, I shall confine myself to old-age assistance, old-age and survivors insurance, and the need for new legislation to provide medical and hospital benefits for our senior citizens.

Old-age assistance is local relief or welfare assistance, paid to the aged who are in need, and who do not qualify for old-age and survivors insurance. It is sometimes utilized to supplement the latter program where OASI benefits are too low.

Old-age assistance was intended to cover the gap until the old-age insurance program was developed to reach all the people of our Nation. Eventually, because nearly all people reaching old age will have worked in covered employment, or will have been married to one who was, old-age assistance would largely disappear, and would be replaced by old-age insurance which is a right and not a charity.

Money to buy the essentials of survival, such as food and shelter, is the most obvious and urgent need, but it is not the only one. Take the case of Jane Doe for example. She's the elderly widow who lives in a two-room walkup flat. Since her husband died 3 years ago, her health has steadily failed. More and more of her time has been spent within the four walls of her cramped little housekeeping rooms. As her savings ran low, less was drawn from them for food and needed medical care. Like a shroud, loneliness and irritation settled around her. Aid in addition to an old-age assistance check was necessary to help Mrs. Doe preserve and strengthen her physical and emotional health. It was essential to help her find some satisfying outlets for her energies and a way to share again in the life of her community.

The work of public welfare staffs directed toward achieving this broad goal of human well-being is what is generally known as social services in public assistance.

But the older people themselves, whether they are receiving public aid, or whether they have retired on the old-age insurance they have earned, are doing something about this problem.

The Revere Golden Age Club is proof of that fact.

On your own you have organized this group where people share the same interests and hobbies and find happiness in companionship.

Men and women who were too busy working and raising families during their younger years, finally reach the age when they are free to do the things that were postponed.

The golden age should be just that, not only in terms of the ripening years, but in the enjoyment of mature satisfaction as well.

A group of older people up my way frequently go off on a sight-seeing bus tour that takes thew to some special event, or to some beautiful or historic location that they missed during their working years. They have as much fun planning these tours as teenagers planning a school dance. And when the trip is over, they always look forward to the next one.

There should be more of these, and other pleasant activities for retired persons.

That will be possible when their benefits are increased.

As the social security taxes on payrolls inch upwards, it is only fair that the monthly checks to recipients should become more substantial.

For the intent of Congress ever since the first cautious start was made in the building of a true social security system, was not to provide the older people with enough income to pay for bread and clothing and shelter alone but with that extra income to do with as they pleased, giving them the freedom of choice that adds to human dignity.

The present benefits from old-age insurance are not enough for this purpose.

Slowly but inevitably they will be raised to close the cost-of-living gap.

But we also need fringe benefits for the older people, including special housing accommodations and provision for medical, hospital. and nursing-home care.

Last year, in a statement to the House Ways and Means Committee, in Washington, I supported H.R. 4700. This is the bill introduced by Congressman FORAND to amend the Social Security Act and to provide that persons eligible for old age and survivors' benefits shall also be eligible for medical and hospital benefits.

If and when this bill passes, it will mean that 60 days of hospitalization will be given in any 12-month period to those who have retired under OASI. The cost will be paid from this Federal trust fund to the hospital, physician, and nursing home which provides the services.

If the patient is transferred to a nursing home from a hospital, and if the services are for an illness or condition associated with that for which he received hospital services, an additional 60 days of nursing home care will be paid for from the trust fund. In no case shall the combined total exceed 120 days in any 12-month period.

This plan of health benefits would be of great help to older people who have difficulty in acquiring private insurance, and who often neglect themselves because they do not have the money to pay for medical services.

Social security is not doing the job when, as at present, it forces its so-called beneficiaries to seek public assistance with its degrading means test and when it fails to provide for medical and hospital care.

The Consumers' League of New York reports that the number of residents of that State who are 65 years of age and older, is approaching the 2 million mark. The league found that the relief costs to New York State can be reduced and much unnecessary suffering for the older citizens can be avoided if the earned retirement benefits under the program are increased, not only to keep pace with the rising cost of living, but to provide health insurance in addition to monthly benefit checks.

The mounting number of aged in our population, and the sharp rise in the cost of medical care will not permit the national conscience to evade its responsibilities to the older citizens.

The aged properly resent any questions by officials as to the resources of their children. They do not want anyone to contact their sons and daughters in an effort to find out what they can contribute to the support of their parents.

This is a matter of personal pride that should never be violated.

With this in mind; social security, pensions, and health insurance for the aged must be sufficient for their needs, and as a right to which they are entitled after their long years of work.

Through organizations like the Golden Age Club of Revere the general public is ever reminded that respect and protection for the aged of today, will entitle younger people to the same consideration when they in turn, become the senior citizens of tomorrow.

I do not want to leave you with the thought that I regard monthly checks, or insurance, as the complete answer.

By your own initiative in forming and supporting the Golden Age Club you have opened my eyes to the wonderful spirit of your members.

The ability to develop new programs for your own happiness and fulfillment is a quality that all your fellow Americans admire.

By this combination of Government programs and the programs organized by our retired citizens to make these the best years of their lives we shall build a social security that will be one of the real accomplishments of our civilization.

Fewer Farmers Hasn't Solved the Problem

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. WOLF. Mr. Speaker, the following articles speak for themselves:

[From the Cedar Rapids Gazette, Dec. 30, 1959]

FEWER FARMERS HASN'T SOLVED INCOME PROBLEM

WASHINGTON.—A panel of agricultural economists agreed Tuesday that the mass movement away from farms has not fulfilled predictions that such a shift would solve agriculture's problem of declining income.

Instead, they said, the migration during the past quarter-century has created new problems for rural communities, for the individuals involved and for the cities to which the farm people have come.

Speaking at a meeting of the American Farm Economic Association, Dale E. Hathaway, of Michigan State University said, "there is no evidence that the migration has appreciably closed the gap that existed in per capita incomes of farm and nonfarm people."

"Most of the movement," he said, "has been from farms with few resources." Thus it did not leave behind income possibilities of consequence to divide among those remaining on the land.

[From the Cedar Rapids Gazette, Dec. 27, 1959]

AMERICAN FARMER IS UNSUNG HERO

The unsung hero, or perhaps it would be more accurate to say the unrecognized victim, of the fight against inflation since the end of World War II has been the American farmer. A vast supply of relatively cheap food has offset the steadily climbing prices of other cost-of-living items.

The average American consumer spent 26.9 percent of his disposable income for food in 1947. In 1959 it is estimated that food took only 20.8 percent of the average consumer's disposable income.

Consumers' disposable income rose from $220 billion in 1947 to nearly $335 billion in 1959. Had food expenditures risen in the same proportion, the Nation's food bill this year would have been more than $90 billion instead of the less than $70 billion it is now estimated.

The addition of $20 billion to the cost of living would have tremendously increased the pressure of inflation. Many labor wage scales are tied by contract to the cost of living, so such additional costs would have given added impetus to the inflationary spiral.

Consumers have a real bargain in food. Using the 1947–49 average as 100, the index of retail food prices has gone up from 95.9 to only 116.1, while total disposable income has risen from 97.4 in 1947 to 148.2 in 1959.

The farmer, as we said, is the victim. His share of the consumer's food dollar has declined from 51 cents in 1947 to less than 38 cents at the close of this year. Farm marketing charges have increased about 40 percent since 1947.

Inflation and rising costs in other segments of the economy have the farmer in a bind. Prices paid by farmers for commodities used in production, interest, taxes, and wages have risen from 240 percent of the 1910–14 parity base period in 1947 to nearly 300 percent in 1959.

Meanwhile prices received for farm products have declined from 276 percent of the base period in 1947 to around 230 percent as 1959 draws to an end.

The plentiful supply of a wide variety of high-quality foods is the very foundation of our vast economic growth during the postwar period. Farmers who provided that food have not shared fully in the prosperity to which they have contributed so much.

Our vast agricultural production is a main source of this country's industrial, military, political and, we trust, spiritual leadership of the free world.

This very week the central committee of the Communist Party is meeting in Moscow to figure out ways to increase agricultural production in Russia. Khrushchev and his minions recognize Russian agriculture as the weak link in the Communist regime.

Viewed from that angle, the few billions a year spent in efforts to keep American agriculture in business are far from the "scandal" that certain groups brand the farm programs.

Admittedly the programs we have now aren't working very well. The need is to develop policies that will work. This Nation can well afford to make substantial expenditures to shore up agriculture, our basic industry.

Food-for-Peace Program

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, February 4, 1960

Mr. CHURCH. Mr. President, although the Agricultural Trade Development and Assistance Act of 1954, popularly known as Public Law 480, was extended last year, there is still pending on the Senate Calendar a bill, S. 1711, which would transform it into a genuine food-for-peace program.

This measure was introduced by the Senator from Minnesota [Mr. HUMPHREY] with sponsors from both parties. As one of these sponsors, I addressed the Senate in support of the food-for-peace program last August 24. It has wide and growing support, Mr. President.

Now an eloquent new voice has been raised in support of the food-for-peace program, with the publication in the February issue of Think magazine of an article written by CHESTER BOWLES entitled "Our Farm Surplus Can Be Their Daily Bread." From his experience as our Ambassador to India, Mr. BOWLES speaks with authority of the tremendous impact this program would have in the developing countries, and of the contribution it would make to the achievement of a peaceful world.

I ask that this fine article may be printed in the Appendix of the RECORD, and I commend it to the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR FARM SURPLUS CAN BE THEIR DAILY BREAD

(By CHESTER BOWLES, U.S. Congressman, Connecticut)

It will be ironic indeed if history records that the free world died of its own fat. Yet this may happen unless we shake ourselves loose from the attitudes of mind we have developed about our so-called agricultural burden and see it for the wealth that it really is.

While much of the world is undernourished, the richness of our land, the industry of our farmers, the mechanization of our farming operations, the spectacular improvement in fertilizers, seed and pesticides and our new knowledge of the growth patterns of plants and livestock have combined to expand our agricultural productivity far beyond the hopes of our fathers. Our granaries, overflowing with wheat and feed grains, our abundant stocks of rice, milk products, fats, oils and cotton are major national assets that can and should be invested in the achievement of a better world.

Almost every country in the world is short of food and must import at great cost or allow its people to remain undernourished, a ready target for disease and disillusionment. Such conditions are a major stumbling block to political stability in the underdeveloped areas, where new governments are struggling to achieve higher standards of living.

In the meantime, the biggest single problem facing our Soviet competitors continues to be food production. Even more critical is the dilemma of the Communist regime in Peiping, which must feed 650 million people with only 1.7 acres of land for each family.

Yet here is the United States of America with its storage bins overflowing with abundance—wondering what in the world to do with it all.

Dramatic situations require dramatic actions.

Now is the time to build upon the experience gained through our postwar relief programs, the Marshall plan, the Mutual Security Act and, particularly, the Agricultural Trade Development and Assistance Act of 1954.

Five years ago, the Agricultural Trade Development and Assistance Act, known as Public Law 480, was set up to donate, barter, or sell America's agricultural surpluses through nonprofit voluntary American agencies.

By June 1959, 37 countries had bought U.S. agricultural products in exchange for their own currencies, with sales alone totaling over $5 billion. Care was taken, of course, that the farm commodities concerned came from supplies that exceeded an effective dollar demand in the United States and that the normal dollar export markets were protected.

As a result, tens of millions of people who would otherwise have gone hungry have been fed. And the foreign currencies involved have largely been turned into foreign loans for economic and social development projects. So our assistance is doing a double duty.

A typical sales agreement under this law is a complicated transaction. But basically, this is how the system works:

Suppose for example, that we should reach an agreement with the Government of Brazil to sell surplus wheat. It would cover the value and kinds of commodities to be financed, the period of time involved, safeguarding of usual markets and the assurance of use as intended, the exchange rate, and the highly important allocation of the foreign currencies among the many authorized purposes.

After the agreement is signed and the purchase authorized, banks in both countries must be designated and letters of commitment sent to the U.S. bank for reimbursement by the Commodity Credit Corporation. The foreign bank eventually pays the value of the sale by depositing local currency to the account of the U.S. Treasury rather than crediting dollars to the account of the designated U.S. bank.

Good as this program has been, it contains several basic deficiencies in law, in spirit, and in administration, most of which can be traced to the assumption that our agricultural abundance is really only a temporary surplus problem.

Almost all agricultural economists refute this narrow view. For the foreseeable future, the United States will continue to produce 5 to 10 percent more agricultural goods than can be sold through commercial chan-

nels. Long-range projections indicate that this surplus will persist for some years ahead.

At the same time, the underdeveloped nations of Asia, Africa, and Latin America cannot maintain their freedom unless they provide their people with greater opportunities and a better life. If all hopes for freedom disappear there, then the prospects for peace will grow dim throughout the entire world.

Our experience, as we have seen, established the guidelines. The underdeveloped nations have ample manpower to do the work that must be done. As their reserves of food and cotton fiber grow, they can pay the workers modest wages without driving up the prices of the basic commodities.

This means that by careful planning in partnership with these hard-pressed new nations, we can indirectly turn our surplus foods into new roads, schools, and factories—into healthier people capable of producing by their own labor new free societies that can ultimately take their rightful place among the more prosperous nations.

The sales of food and fiber which we have already made have accumulated a credit to the U.S. Treasury of some $2 billion of unused "soft currencies." Some say that this is the point at which to stop. On the contrary, it should be the beginning.

Some of these soft currencies generated by our food sales abroad should, of course, be put aside to cover the expenses of our missions in these countries. But the bulk of those currencies, paid by those who have bought the food locally, should be loaned back to pay the cost of local wages and local materials. Any good businessman would make his money work for him.

The law authorizes a number of uses for foreign currencies which, if imaginatively promoted, could turn our present program to far more productive use.

But these purposes are stated too restrictively in the current legislation, and additional limitations written into the law seriously weaken its scope. We can and should expand Public Law 480 commensurate with the tremendous opportunities actually facing us.

For instance, the need for more new schools and more teachers in all underdeveloped countries is enormous. People who are better nourished and better educated will find it much easier to summon the energy and abilities which are necessary for their own successful economic development.

Soft currencies can also be used to finance the publication of millions of good books in dozens of different languages to sell to idea-hungry Africans, Asians and Latin Americans for a few cents each.

Our agricultural abundance should, of course, continue to be given outright in cases of famine or disaster.

Admittedly, the situation is complicated by the fact that the United States is not the only free nation with high agricultural capacity. We must find a way to join hands with Canada and Australia and other food-exporting nations in using our agricultural abundance for the economic and social development of the free world.

At this early stage we probably must operate on a bilateral basis. But our long-range objective should be multilateral arrangements and the use of international agencies in achieving our common ends.

BANKS FOR FOOD

A forward step would be the storage abroad in United Food Banks of a major part of our food reserves. This idea has been developed and discussed before the United Nations and the U.S. Congress. At this session of Congress in 1960, thoughtful citizens throughout America should press for legislative action. It is morally wrong and politically stupid to allow our stored commodities to become a wasting asset.

We should undertake to store at least one half of our entire grain surpluses abroad in well protected U.S. food banks as a visible assurance against the traditional dangers of famine and disease, and as a dramatic demonstration of the willingness of the American people to see that no one starves while we have food to spare.

A look at the mechanics suggests that such a program would in fact save the American taxpayer considerable money. It now costs our Government 20 cents to store a bushel of grain for 1 year. Yet it costs only 38 cents to ship a bushel of grain to India or Iran. This means that in 2 years we can pay the full cost of each shipment and start to save money.

The total annual cost for storage, interest and handling charges on delivery of our stored grain is now $1 billion. If we shipped half of it to food banks in India, North Africa, Indonesia, the Middle East, Egypt and other countries with short or uncertain food supplies, and stored it at the expense of the recipient country in storage warehouses built by local currencies, the savings to us over the years would run into the billions.

So any way that you look at the question—from a moral, political or dollars and cents point of view—the setting up of these food banks makes sense.

We would want, of course, to make sure that they were well constructed so that the grain would be protected against spoilage and vermin. We would also need written agreements so that each government would draw on its grain reserves only in accordance with standards mutually agreed to.

Donation in case of actual failure of a harvest would, of course, have top priority. Grain from the food banks should also be available for donation or sale as a protection against soaring food prices if the recipient country encountered a critically inflationary situation due to general food shortages.

In judging world food needs we should look beyond the old colonial standards which were based on the amount of food required for a man just to go on existing, sitting under a tree, somehow getting by.

Substantially more food is required if he is to do a good day's work building a road, a school, a health clinic or an irrigation ditch. Under such circumstances the daily caloric requirement jumps from about 1,600 calories to 2,600 or 2,800.

This means that as people in the underdeveloped areas step up their programs of work and expansion which is what they are doing and must do, the daily caloric requirement for the same number of people, without consideration for the increase in population, jumps enormously.

For instance, the food needs of the new awakening India are such that her Government is trying to push her annual food grains production from 78 million tons to 110 million within the next 7 years. That is a formidable production goal, but the Indians are determined to reach it.

Let's hope that they succeed. But in the meantime, by building and stocking a network of food banks across India, we can help remove the immediate fear of hunger that undermines morale and leads to private food hoarding and speculation.

It is difficult to exaggerate the psychological impact of such action in India and other nations in similar circumstances. When we consider the schools, irrigation, and other development projects that can be financed with the local currencies paid for this food and fiber, the economic and political implications become doubly dramatic.

Most of the people of Asia, Africa, and Latin America have always led a hand-to-mouth existence. In northern India, for instance, much depends each year on the winter rains. Some years they come and some years they don't.

Two years ago I rode through the Punjab when rains happened to come in abundance. For 200 miles we drove through groups of happy villagers singing, dancing, laughing and smiling. Now they knew that their crops would be good. For the new year there was no reason to fear that their children would go hungry.

PUT FOOD TO WORK

The benefits of the long-term, commonsense, businesslike use of our abundant supplies of food and fiber which I have outlined would accrue not only to people in the developing countries. It would also benefit our own farms and, indeed, all of us who can prosper over the long haul only as living standards rise and as new world markets open.

Yet the greatest benefit of all is the contribution of such a program to the achievement of a peaceful world. If we are ever to live in such a world, we must work and plan to build it.

If we continue to allow $10 billion in food and fiber reserves to lie idle in a hungry and impoverished world, we will fail to live up to our Judaeo-Christian heritage. We will also commit a political blunder that future generations of Americans will find it difficult to understand.

Let us hope that the administration and the Congress will recognize the challenge in the next few months and boldly act to meet it.

A Bill To Provide Medical Scholarships

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. FOGARTY. Mr. Speaker, I have requested this time on the floor of the House of Representatives for the purpose of introducing legislation which will influence the number and help assure the quality of physicians for our growing population in the years ahead.

I ask the Members to ask themselves one simple question: Are you willing to entrust the health of the American people to proportionately fewer doctors of lesser competence, as compared with today? If your answer to that question is "No," as it must be, then I ask your interest and support in the bill which I place before you.

The facts that underlie this bill are hard, but not cold.

Some of our better medical schools are admitting students with a C average in their undergraduate work.

Ten years ago, 40 percent of the students accepted by medical schools had an A average in their undergraduate work; today, only 18 percent have an A average.

The number of applicants for medical school has declined by about one-third since 1950.

The present ratio of physicians to population is considered by experts to be the minimum essential for the protection of the people's health; yet the number of physicians graduated annually must be increased by 50 percent if that

ratio is to be maintained as our population reaches upward toward the 200 million mark.

The implications of such facts are perfectly obvious. We are threatened with a shortage of physicians. And we are already faced with a decline in the caliber of students entering medical schools.

It is equally obvious that no remedial action of consequence will take place unless the Federal Government acts in a positive and constructive way. With leadership and stimulus from Washington, the States and local institutions will carry their share of this grave national responsibility.

I therefore propose that the U.S. Public Health Service initiate a $10 million a year program of scholarships providing up to $2,500 per academic year to selected students in schools of medicine, osteopathy, and dentistry. The Federal funds would be matched by State funds, and State commissions would select those receiving scholarship assistance on the basis of ability and need.

I have spoken of the threatened shortage to which this bill is directed in terms of both number and quality.

Let me comment on the number question first.

The bill that I introduce today has an indirect relationship to the supply of physicians and dentists in the years ahead. By increasing the number and quality of applicants for medical and dental education, it will serve as a pressure on States and institutions to provide additional resources—either to create new schools, or to expand existing schools—so that the well qualified young men and women can study in their chosen field.

A much more direct way of increasing present enrollment—and thus the number of graduate physicians and dentists—is by the construction of new facilities. In the 1st session of the 86th Congress, I introduced legislation that would authorize matching Federal grants for the construction of facilities for medical and dental education, paralleling the existing and highly successful Public Health Service program of grants assisting in the construction of health research facilities. I regret to say that this vital legislation has not been enacted, and call upon my colleagues in the House, and especially those serving on the committee responsible for health legislation, to see that this 2d session does not come to a close without action that will stimulate the renovation and modernization of our existing medical, dental, and osteopathic schools, and—even more important in the long run—the creation of new schools.

I want my colleagues to know that I sought, but did not get, the support of the executive branch on this construction grant legislation. I shall not burden you with the details of my correspondence with the President. It followed a now-familiar pattern: the problem is recognized, somebody should do something about it, preferably not the Federal Government, but the matter is under study and may be accorded token support if the pressures are great enough. In the meantime, it would take nearly 10 years to build and graduate the first class from a new medical school, and present schools can barely keep up with their present enrollment and certainly cannot expand unless they get a kind of support they are not now getting.

I wonder if the American people a few years hence will understand if we today, knowing the facts, deliberately place their health in jeopardy by not planning and building facilities to train enough doctors to give them superior medical and dental care?

But the bill I introduce today is focused primarily on quality, not numbers.

All sorts of reasons are given why medical education and a medical career no longer attract as many qualified college students as they used to.

Some of these reasons are bound up in intangibles. There are those who would point to the increasingly materialistic point of view in our society, to the diminishing rewards in a life of service, to deterioration in the image of the physician today, to general failures of today's young people to accept responsibility to contribute something to our society instead of merely taking from it.

I cannot subscribe to these views. I have a fundamental faith in the innate strength of the American people in both an individual and a community sense. And I have a deep-rooted conviction that we can and will meet boldly the challenges that confront us as we stride into a decade that may well encompass the acid test of our democracy.

No—I believe it is factors that are far more real and immediate and practical that tend to influence some of our most promising young people against choosing to pursue careers in medicine and related fields.

One such factor is the factor of time. The average American finishes high school at age 17 or 18. If he has the interest and potential for higher education, and if he is considering medicine as a career, what does he see ahead of him? Four years of college, 4 years of medical school, a year of internship, 2 years of residency (if he wants to specialize—and most young physicians do—plus probably 2 years of military service under the doctor draft law. Thus the high-school student sees this choice of career as another 10–12 years of education before he can settle down to earning a living.

Related to the factor of time is the factor of money. The cost of a medical education to the individual and his family can be overwhelming. Those in modest circumstances, regardless of interest and capacity, will think long and hard before accepting the burden of such education. There are some scholarships and loan programs, of course. But they barely scratch the surface in terms of the need. At the end of medical school, about one-third of all graduates are at least $2,000 in debt. Some 17 percent have debts of $5,000 or more. This does not take into account the hardship and sacrifice of their families. Many married medical students—three-fifths of them marry before they graduate—owe their medical education to their wives, who must work to support the family throughout the long educational period. And even after finishing medical school the low income status continues during internship, residency training, and military service. For a great many families in the middle and low income groups, the financial prospect is too frightening to face, and the individual chooses another career in which the cost of education is less and the return on the investment more immediate.

In addition to time and money, there are other factors at work in the qualitative and numerical decline in applications for admission to medical and related schools.

One of these is quite personal: many young people want to settle down, marry, and have families while they are young. It is very hard to do this during the medical educational process unless there is a strong source of outside support.

Another factor is competing fields. As a matter of national policy, the United States has sought to give impetus to higher education in physics and other scientific fields, and significant support is available at graduate and postgraduate levels. Since similar support is not available for medical and dental students, it is understandable that many of the brightest young people choose to climb the rungs of the scientific career ladder.

Paradoxically, for those who do choose and remain in medicine, the need to make money once training is finally completed is so great that the less rewarding positions in fiscal terms—such as teaching, research, public health, and military medicine—often must be rejected, despite the individual's preference, because he simply must start to earn money and pay back his debts.

Since the health of the American people is one of our most precious national resources, it follows that we cannot let it be jeopardized by compromising on the number and quality of those who take care of the people's health.

The bill that I introduce is of course not the total answer. It is, however, a sound beginning, based on principles that assure the independence of individuals and of institutions, the integrity of States, and collaboration without control by the Federal Government.

The bill provides for scholarships of up to $2,500 per academic year to students in medicine, osteopathy, and dentistry. State commissions would select recipients on the basis of their ability and their need for assistance. The commissions would also review the students performance annually to determine their eligibility to continue to receive the funds.

One-half the cost of the scholarships would be borne by the States. In order to receive Federal funds, each State would be required to submit to the Surgeon General an acceptable plan for administering the scholarship funds.

The bill authorizes an initial appropriation of $5 million for fiscal year 1961, and $10 million for the succeeding

nine fiscal years, to be allotted proportionately among the States on the basis of their populations between the ages 20–24 inclusive. The lesser authorization for the first year is to allow the States sufficient opportunity to initiate this program.

When matched with State funds, the $10 million in Federal funds would make it possible for 8,000 medical students to receive $2,500 scholarships each year. This means that—after the program has been in operation for some time, perhaps—one-fourth of all present medical school students would be partially financed under these scholarships.

I want to emphasize that the average expenditures of medical students are in excess of $3,000 a year, so a scholarship under this legislation does not cover the full cost of the individual student.

I seek your support of this bill. There is urgent need for it. The need is apparent in the facts obtained from medical school admissions offices. And it has been clearly recognized and forthrightly stated by a group of distinguished advisers to the Surgeon General of the U.S. Public Health Service. In their report, Physicians for a Growing America, the consultant group, chaired by Mr. Frank Bane, for many years the executive director of the Council of State Governments said:

> The Federal Government should establish educational grants-in-aid for medical students on the basis of merit and need, similar in value and proportionate in number to grants now made to graduate students in other fields of specialization. These educational grants should be available to students so that they could attend a medical school any place in the United States.

What my bill does, in effect, is to fulfill that statement of a most pressing need.

In this matter, as in the matter of the construction of new facilities for medical and related education, which I mentioned at the opening of my remarks, we simply cannot wait. We must act, and act now, if we are to begin to turn the tide toward keen competition for admission to medical schools and the gradual expansion of our graduating classes.

I feel this way about it.

As a nation, we have reason to be proud of what we have done in the 1950's to strengthen and broaden our research effort in the health sciences. Sound research porjects are virtually assured of long-term support, and we are investing sizable amounts of money in the development of research manpower and research facilities for an even more intensive search for new knowledge in the years ahead. Our patterns of research support are still imperfect. No way has yet been devised to provide career opportunities in health research that are stable, adequately remunerative, and professionally rewarding. Moreover, the universities, medical schools, and other research centers are desperate for operating funds that will strengthen them as institutions and permit them to achieve greater independence and exercise greater leadership as we face the intellectual, technological, and social challenges that surely confront us. I feel sure that these problems of research support can and will be solved.

As a Federal Government, we cannot discharge our responsibilities by supporting the research functions of nonfederal institutions but ignoring their capacity to perform their educational missions. Our experience in research demonstrates that the Federal Government can actively and broadly support university activity without domination, control, and interference. The same thing is true in medical and related education. We can assist the schools in constructing new and modernizing existing facilities. And we can assist deserving and needy students by defraying part of the high cost of extended specialized education that prepares them for lives of service to the people. We can do both of these within existing policies bearing on the relationship of the Federal Government to nonfederal institutions and to individual citizens, and we can do it without raising any of the ugly specters about Federal aid to medical education that are so often used as rationalizations for inaction.

The intent of the bill that I place before you is simply to place medical and dental education on a comparable status with advanced education in the sciences. We can do nothing to ease or shorten the strenuous course of study required to equip a young man or woman for competency in the medical professions. But we can and should take positive action to ease the intolerable financial burden which these young people must now shoulder in order to perform this service to humanity.

The Chaotic State of Highway Law

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1860

Mr. HALPERN. Mr. Speaker, among the numerous means for increasing safe driving on the Nation's highways is that of adoption of the Uniform Vehicle Code by all States. The beneficial consequences would be many, the most important of which would be the elimination of the existing maze of confusing traffic laws encountered by a person driving from State to State. Adoption of the Uniform Code would not only enhance driving safety, but it would make it easier to deal with offenders on an interstate basis.

I have long supported these views. The New York State Joint Legislative Committee on Motor Vehicle Problems, of which I was chairman, strongly endorsed the Uniform Vehicle Code as a pattern for all States to follow. The rules of the road provisions of the code were embodied in New York law in 1957 following the joint committee's recommendations and approval by the State legislature.

Steps are now being taken in New York and other States to adopt further provisions of the code but the pace is beset with delays. The urgency of securing increased adoption of the code by the States is such that I have introduced a bill to authorize the Interstate Commerce Commission to use its best efforts in promoting this development. The situation is critical enough to demand some such leadership on the Federal level.

A concise summation of the need for greater enactment of the Uniform Vehicle Code was set forth in an excellent article in the Washington Post of January 30. I ask that this article be printed in the Appendix at the conclusion of my remarks:

THE CHAOTIC STATE OF HIGHWAY LAW

The Chevy Chase Circle, on the outskirts of the Nation's Capital, happens to lie on the border between the District of Columbia and Maryland. To the interstate motorist this accident of geography might be of only incidental interest, but for one thing; according to D.C. law, the car in a traffic circle has the right of way. But in Maryland the car entering has the right of way.

History doesn't record whether two law-abiding drivers have ever played Alphonse and Gaston there, backing up traffic from Boston to Miami. But the Chevy Chase Circle does point up the countless contradictions, confusions and absurdities of law that are at once a nuisance and a hazard to the interstate driver—which means to practically everyone who drives at all.

(EDITOR'S NOTE.—This slightly overstates the actual situation, according to District Highway Director Harold Aitken. The conflict is one, not of regulation, but of sign placement. On the District side of the circle there are stop signs on connecting streets, thus giving traffic in the circle the right of way. On the Maryland side there are no signs, and consequently traffic entering the circle from the right—namely, the connecting streets—has the right of way.)

The maritime nations of the world long ago got together on a single set of traffic laws for the high seas. But the several States of our own indissoluble Union have not been so cooperative with regard to the Nation's ever more crowded highways, with the result that what is required in one State is often illegal in another.

The conflicts are annoying in matters such as parking, traffic signs and road markings; they are downright dangerous when right-of-way is involved, or passing and turning rules, or what to do when approaching a stopped schoolbus.

And the confusion is needless.

Way back in 1926, long before the tail fin was even a designer's dream, an officially appointed committee of experts sifted the traffic laws of all the States and, taking the best from each, drew up a uniform vehicle code. This has been constantly revised and kept up to date by the National Committee on Uniform Traffic Laws and Ordinances, now an arm of the White House Conference on Highway Safety.

But State legislatures have still held out. The New York Legislature, to its credit, in 1957 enacted the rules-of-the-road section of the uniform vehicle code practically verbatim. Wisconsin and Nevada have recently done the same, and a number of other States have been adopting parts of it in a piecemeal fashion.

A recent check, however, showed the rules of the road in 10 States still (after 34 years) not even in "substantial" agreement with the code, while many others differ in varying degrees. And 14 failed to conform even "substantially" on license requirements, an equal number on accident reports and on vehicle equipment, and 34 on periodic inspection requirements.

Getting together on the rules of the road clearly has first priority. But as long as a license to drive in one State is a license to drive in all, each has a direct interest in the others' in keeping unsafe vehicles out of interstate traffic.

One of the principal obstacles to extending reciprocity on traffic offenses has been the disparity among State laws. Get the laws in line with one another, and offenders can better be dealt with on an interstate basis.

Furthermore, we should consider the possibility of coordinating our traffic laws with those of other nations, with the volume of international travel rapidly increasing and with many travelers going by car.

Of first importance, however, is for all 50 of our own motorized United States to get together. The uniform vehicle code is written; it has been amply tested; it needs only to be adopted. Which means, simply, legislative action by States.

Since the advent of the automobile an estimated 60 million Americans have been killed or injured on the roads. In 1958, deaths totaled 36,700, injuries 2,825,000. A lot of these persons would be alive and uninjured today if all drivers on the same roads had a single set of rules to drive by. And 34 years is long enough, it seems to us, to have stalled on adopting those rules.

Deficiency Payments Plan Is Under Attack by Canadian Farmers

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. MUNDT. Mr. President, all of us are so concerned about the continuing farm problems in the United States we tend to forget, at times, that other countries also face serious farm problems in this postwar world. Canada, for example, which has experimented with a wide variety of agricultural programs is now having headaches with its latest experiment.

E. W. Keickhefer, editor of the Daily Plainsman, of Huron, S. Dak., writes some interesting observations in his farm column which my colleagues may find it profitable to read. It deals with the farm problems of Canada.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFICIENCY PAYMENTS PLAN IS UNDER ATTACK BY CANADIAN FARMERS

(By E. W. (Kieck) Kieckhefer)

Trouble is brewing in Canada over the new program to give hog raisers and egg producers deficiency payments instead of straight price supports.

Under the new system, the Canadian Government makes a limited deficiency payment to farmers if the 12-month national average price falls below a determined "fair" price.

The egg program has been in effect for several months. The hog program began just last month.

One of the Conservative government's own supporters denounced the plan in a party caucus last week and there were attacks upon it also at the meetings of the Canadian Federation of Agriculture at Toronto. Farmers claim the plan is not giving them adequate income insurance.

Grade A egg prices were down to 15 cents a dozen at Winnipeg last week and grade C eggs were down to 7 cents a dozen. Grade A hogs were selling for $18.75 and sows mostly $10 to $11.

Agriculture Minister Harkness in a speech to Commons in Ottawa said the system meant producers were guaranteed a support price for the year, to the extent that their average return fell below the guaranteed price.

The payment, he explained, was not guaranteed on each individual sale. Such payments, he said, would be "hopelessly expensive" and there would be no incentive for the farmer to get the best possible price for his products.

Harkness said that because of the Government's program marketings of hogs and eggs will be lower this year and as a result there may be some decline in the farmers' gross income. All Government efforts were designed to give the farmers a fair share of the national income, he added, but it never claimed it had completely succeeded in doing so.

Colonel Griffin Reports on the Soviet Scene

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. ENGLE. Mr. President, the editor and publisher of the Monterey Peninsula Herald, Mr. Allen Griffin, spent 36 days in the Soviet Union during August and September 1959, observing the Soviet Russian scene. Since he made a similar trip in 1931, his impressions of developments in this vast land over the past generation are important to a thoroughgoing understanding of the direction of world communism.

Mr. Griffin founded his newspaper in 1921 and has been its publisher ever since. At the same time, he has had a distinguished career in the public service, both as a civilian and as a soldier. He served in both world wars, as a captain in the infantry in World War I and as a colonel commanding the 13th Infantry Regiment of the 8th Infantry Division in World War II. He has received medals too numerous to mention; but I would at least like to cite the Distinguished Service Cross, the Silver Star, the Purple Heart with Oak Leaf Cluster, and the Croix de Guerre (France). One of his many civilian public offices was that of Director of the Far East Division of the Economic Cooperation Administration held in 1950–51.

Colonel Griffin has reported to his readers in a series of articles which appeared in his paper during October and November 1959. These 20 articles were later reprinted in booklet form. I am sorry that the length of the booklet precludes my entering all of it into the Appendix of the RECORD so that my colleagues could share all the experiences, observations, thoughts, and conclusions of Colonel Griffin. I ask unanimous consent to have inserted in the Appendix the last two articles which summarize these thoughts. We would do well to heed Allen Griffin's warning contained therein never to let our guard down or underestimate our adversary.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

A FEW THOUGHTS IN SUMMARY—PART 2

However fascinating the subject is to the author, a newspaper series devoted to one area over the period of one visit must come to an end. It hasn't a captive audience; and there are doubtless not a few people who are disappointed and provoked that these articles have failed to confirm their rosy or complacent points of view.

A summary, even if partially repetitious, of certain thoughts and observations may be pertinent in the conclusion:

The capabilities of the Russian people should never be underestimated. Russian names occur again and again in the stories of American music and art, science and invention, scholarship and business enterprise. The same is true in France, and it is true in England. These have been the countries most hospitable to Russian talent, perhaps France more than any.

These people of Russian and, in some instances, Russian-Jewish derivation, have made substantial, sometimes sensational, contributions to the national civilizations in which they have found a home and could freely develop their talents and genius. I cannot help but believe that if this great and now well-awakened nation were given a reasonable degree of self-expression and self-realization, it would contribute vastly in every field of human endeavor, including those that are the tests of quality of civilization.

That, however, requires the strong, spicy breath of free air from the outside. It requires free travel, free expression, absence of fear that something one might dare to say or write or paint would bring disaster. Communism cannot stand that freedom.

Communism is always on guard, always fearful of the poison of liberty and of dangerous thoughts, always ready to clamp down savage restrictions. The machinery for prevention, intervention, and control has been perfected. The people have accepted it.

Only in the fields where the power of the state is materially and materialistically advanced is there freedom—freedom to work within all possible state assistance in such fields. And great rewards.

Russian art, literature, architecture, and philosophy might similarly "go for the moon" if the people were given freedom in those areas of civilized life. That, of course, is impossible.

For a long period the American people believed that quality and quantity of production, and efficiency of output were inherently impossible under communism. Genius in these fields, it was asserted, could flower only under free enterprise.

Perhaps after some 40 years of communism it is still too early to tell; but I am decidedly inclined to believe that communism, even though it is a horror to the human spirit and to civilized growth, has great capabilities of efficiency. It has proved it. It can undertake and accomplish gigantic developments of almost every kind (an exception might be made in agriculture) with great daring, brilliant foresight, scientific planning, accuracy

of detail, and—enterprise itself. It has done so. It is doing so.

Despite what we call lack of incentive, communism can turn out highly efficient male and female workers. I have seen them efficiently working—a great change since my visit to Russia in 1931.

I also believe that Soviet managerial capacity has been developed with extraordinary success, that managers are given great latitude in innovating improvements, and that there is every reason to believe that the Soviet state can produce vastly more for its people any time the hard core, the combat elements, of the Communist Party are willing to spoil the people just a little—and at the same time be a fierce competitor of the West.

This is a terrific ant society. Let us not minimize its power just because we prefer grasshoppers.

In dealing with these people there are things we should not forget, not even for a minute, no matter how tumultuous and sincere the welcomes.

In communism there is no honor, except the honor of undeviating, unquestioning service to communism. There is no conscience except the conscience demanded by communism. There is no real trust in anybody, not in anybody, except the sort of general trust of the people in the state and its hierarchy, which is the result of indoctrination from the cradle to the grave.

In communism the ambitious men climb more ruthlessly on the shoulders of their rivals and associates than in any area of capitalism today excepting the labor movement.

The brutality of this ambition, personified by those who were clever and ruthless enough to survive the purges, by the demotion of Malenkov when he wanted the people to have more commodities, by the rise of Khrushchev and the ruin of Zhukov, and countless other cases among the higher-ups, is repeated down the scale through the lesser echelons of the ambitious.

It is an error to believe that the drive of ambition does not continue, whatever the type of government. It is merely diverted to different fields that may require different talents. And if the field is a sort of jungle, then it seizes upon the law of the jungle to be successful and powerful there.

If there is one thing I would especially stress—and it is something one feels almost physically when visiting Russia—it is that communism depends upon combat. Its nature is combat-minded; its disposition is toward violence. It must fight, outside and inside. It must have enemies. It must provoke the worry in the public mind that the nation has enemies bent upon its destruction and upon their deprivation of all that they value. This is systematically and constantly done.

Within, it must fight, too. It must fight religion always. It must fight spies and saboteurs. It must be suspicious of the factory that fails to make its quota, of the factory worker who complains about the speedup. It must fight for more wheat, more steel, more cotton, more coal, more bricks, more cement. Banners, radio programs, television shows, lectures, exhortations—fight, fight, fight. I don't see how a people can stand it, but the Russian people do.

To carry on this fight, the Soviet Government and the Communist Party that runs the Soviet Government must falsify history, including its own history. It must falsify its reports of conditions in other countries. It must storm, rant, scream, condemn, vituperate. This is a highly developed technique. It is indispensable to Communist power at home. It has been successful. It has made mental robots out of most of the people of a great race.

THOUGHTS IN SUMMARY—PART II

Khrushchev scored a great propaganda point by constant reiteration of his claim that he is going to beat the United States economically and that Russians will have everything that Americans have "and more." For some strange reason we seem to have been awed by that claim.

Can Russia beat us economically?

Unless we ruin ourselves by sloth, gangsterism, depravity, loss of moral convictions, or labor-management relations like those exemplified by the steel strike (anarchy), the Russian people will never catch up with the material well-being of the American people, let alone with the other things that we should hold at least as dear.

Moreover, they will never catch up with the well-being of the French, the Danes and other Scandinavians, the Dutch, Belgians, Luxembourgers, West Germans. If the Italians were permitted to export their surplus population, the Communist Russians would never catch up with them, either. The conception is absurd.

In civilized living and culture, in the sharing of the amenities of life by people generally, it is impossible for the people of the Russian state to catch up with the present position of the West until at least 50 years after communism as we know it has been abolished. It isn't size and volume that do the job, as every Luxembourger knows. Why didn't we say as much to N. K. when he was here?

However, in volume of production and also in capacity to do us economic damage, the Russians can go a long way—and they will.

In tons of coal produced annually, in steel, aluminum, cement, various manufactured products (we can hasten that by giving them credits for machine tools), new railroad and new highway mileage—in these and other things they can and will outproduce us on an annual basis. That does not mean that in any foreseeable future they will have more for their people than we have for our people, excepting—area.

RELY ON PRODUCTION

The Russians require an immense production to pick their country up out of the rut of underdevelopment, to fill in the immense gaps; whereas we among the developed countries have a great deal of our material job accomplished (except in schools, parks, certain public achievements).

What we mostly expand today, apart from our requirements for war materials, is production directly for the people—hard and soft consumers' goods and the means to produce them. The Soviets could and should do a great deal of that; but they are occupied first with the task of preparing for war, any kind of war.

American audiences who heard N. K. boast "We will surpass you" (knowing as he did that our freedom of communications would make his voice ring round the world) should not merely have smiled; they should have laughed like Cossacks.

The people of Russia immensely enjoyed N. K.'s challenges made right to our smug faces (they believed him, too) and they enjoyed his reports, especially the sarcasm in them, after his visit to the United States, when he toured Siberia in the manner of a triumphant bullfighter circling the ring after a great performance.

However, what Khrushchev sees in "peaceful coexistence" and "competition" is something the ordinary Russian people don't see. There is a tremendous elasticity of production and of distribution potential in the regimented Soviet state. And the "hard core," the men who create and approve the budgets before they are ever submitted to the figurehead supreme congress control the spigots.

Among other things, peaceful coexistence is a war to destroy capitalism by undermining its markets and creating chaos in world trade. It is entirely unlike capitalist competition, however, subsidized the latter might be. The Soviets gave the warning (like the warning of Korea) 2 years ago when they dumped aluminum on the world market at a cut of 2 cents a pound. And this was aluminum sorely needed for consumers' goods for the Russian people.

Meanwhile no one is competing for the trade of the Russian people. The Soviet Government at every budget determines what the trade is going to be. It determines just how much added benefit it is willing to give to the Russian people in the coming year, just as it determines their wages and salaries. Cleverly it adds limited benefits. It can always say the people have more, and prove it. And just a little more satisfies these well-trained seals.

If it becomes desirable in an era of peaceful coexistence to dump 10 million splendid electric razors (with adaptors) on the world market, it can be done; or 15 million tons of steel, millions of tons of cement, tens of millions of board feet of lumber. Name it, and if it is one of the resources included in the vast wealth of this heartland of Eurasia, a Communist government can prepare for the event without anyone knowing about it and execute it at a timely moment in its unceasing war on capitalism.

Therefore the Communists, with their complete control of productive means and labor and vast natural resources can do us immense injury and plan to do so. I think that is what N. K. really meant when he said he would "bury" us. He said it. He meant it. The mayor of Los Angeles did right in reminding him of it, because whatever the means to be employed it is his objective in life. This is combat. He is a Communist.

And so, when we give him the horselaugh in one respect, we of the Western World had better get together with our planning, to meet this other challenge that might in time greatly reduce our well-being. It will be inexcusable if we are ever caught by surprise.

About trade with Russia—I believe we should. But I also believe that we should demand cash on the line—not one cent of credit—and that we should not sell machine tools. We should push for the sale of consumers' goods.

I definitely had the impression that the Russian people sincerely believed N.K. is trying to save the world from the danger of war and that his program is unassailable by men of good will.

Moreover, I believe that Khrushchev himself is sincere, because he is a good Communist and therefore believes that "peaceful coexistence" is a condition whereby all the advantages accrue to the Communist—by common agreement, too. In the summit conference at Yalta, his former boss got all he wanted, by common agreement. No consideration for "the other fellow" has ever warped N.K.'s good judgment, not even when "the other fellow" was a devout (but possibly disagreeing) fellow-Communist.

In the field of disarmament Khrushchev wants an agreement for the abolition of nuclear warfare in any form. That's what the big shooting-off-at-the-mouth is all about. Despite Soviet missile advantages, we still retain sufficient capability to wreak havoc upon Russia. The Soviets want the Air Force and Navy disarmed of these weapons.

While the Russians, completely secure as they are from land attack, have perfected their vast army and handsomely reequipped it, the United States on the other hand has only a token army left today, underequipped, undermanned, softened by pampering.

suffering from loss of morale. This has been our major folly. Let us pray it will not be a disaster.

No wonder the Russians want nuclear disarmament completely. They have the largest, magnificiently trained and equipped army of modern times. They have always known that war is won by the men who take and hold the ground.

I think the "spirit of Camp David" (antoher phrase invented by N.K.) is a wonderful thing.

We should have a lot of conferences, and talk and talk and talk. We, too, should learn how to make 4-, 6-, 8-hour speeches. Our filibusterers in the Senate know how. I am all for filibustering war.

In the business of giving something up, we have made many concessions, some of them tragic betrayals of whole nations, since 1944. The biggest thing we ever did was to get the Russians to keep their agreement to get out of Austria, even though Austria paid a terribly big bill for it. The only concession Russia has made is N.K.'s "concession" not to rush the illegal sequestration and ruination of Berlin.

Constantly we seem at first to be stunned and tongueties at Communist verbal affronts. It is a weak habit for us to remain in a posture of uneasy defense. We, too, have challenges to hurl, bitter truths to state; and these need not be merely recriminations. But on the other hand, we should be the first to invoke the "spirit of Camp David" when a breathing spell permits it. N. K. is an expert at "gamesmanship." If we realize that, we can have our fun too. The adversary will respect us for it.

TENSIONS

The matter of world tensions has been enormously overrated and then blow up out of all proportions by the Communists. It is folly for us to accept their definition of tensions and to react to them like puppets on strings. The entire idea of tensions has been their invention, thrown before the world and inflamed whenever the Communists have been planning new incidents and new grabs.

For our part, we should disavow tensions and publicly and repeatedly beg "our friends, the Russians," to relax and enjoy this wonderful life on earth—and take some of the pressure off of their people and their sanitariums. We should invite them to join us in smelling the flowers.

So far as concessions are concerned, that is a matter of close weighing on the scales. And let us remember that we are dealing with people utterly without the moral and fairplay standards that at least theoretically guide our lives and conduct. That is the one "freedom" that they enjoy and it makes them the most dangerous and deadily traders in world history.

It is stupid to underestimate the power of Soviet Russia. It is suicidal to be afraid of it. It will be a tragedy if we fail to take the measurements of this adversary. That will be a study without end in our time.

Foreign Exports in Trouble

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. BREEDING. Mr. Speaker, I would like to extend my remarks in the RECORD to include a report compiled by the House Committee on Agriculture on U.S. agricultural exports to Western Europe. This is the report of the study group that visited major countries of Western Europe last fall for the purpose of trying to determine why U.S. exports of agricultural commodities are lagging when the demand for agriculutral imports is increasing. I feel that this report is a most comprehensive analysis as to the shortcomings of our present export operations, and goes far in recommending a solution to this problem. It is my feeling that every Member of Congress should read this report and that the public, generally speaking, should be enlightened. Therefore, my reason for inserting it in the daily proceedings of the House.

The report follows:

U.S. AGRICULTURAL EXPORTS TO WESTERN EUROPE—A REPORT ON THE COMPETITIVE POSITION OF U.S. AGRICULTURAL PRODUCTS IN THE HARD CURRENCY COUNTRIES OF WESTERN EUROPE

LETTER OF TRANSMITTAL

HOUSE OF REPRESENTATIVES,
COMMITTEE ON AGRICULTURE,
Washington, D.C., January 20, 1960.

Hon. HAROLD D. COOLEY,
Chairman, Committee on Agriculture,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Attached hereto is the report of the study group which at your instruction visited the major countries of Western Europe last fall for the purpose of trying to determine, if possible, why U.S. exports of agricultural commodities to the hard currency countries of Western Europe are apparently losing some of their competitive position at a time when the demand for agricultural imports into those countries is increasing.

If the report appears to deal almost entirely with the negative aspects of our export program, this is unavoidable, since the very nature of the inquiry was to find out what is wrong with our existing programs and efforts to export agricultural commodities to these countries.

There are some affirmative aspects to this picture and I would mention specifically as an example the excellent trade development programs which are being carried on in several European countries by U.S. trade groups in cooperation with our Government; the work which is being done by the Great Plains Wheat Market Development Association and the American Farm Bureau Federation to develop our export markets; participation in trade and agricultural fairs to acquaint European importers with our products; and the excellent work which is being done by most of our agricultural attachés in their relationships with the governments to which they are accredited and with local trade groups and importers.

In presenting this report as the Member of Congress responsible for conducting this study, I want to state that the findings and conclusions of the report are not mine alone but are shared by the other two members of the study group: Dr. Walter W. Wilcox, senior agricultural specialist of the Legislative Reference Service, Library of Congress, and Mr. John J. Heimburger, general counsel of the House Agriculture Committee. Their contribution to this study was indispensable. The report presented herewith is a combined finding and recommendation based upon thorough discussion by the whole group of all the information available to it.

Sincerely yours,

CARL ALBERT,
Member of Congress.

U.S. AGRICULTURAL EXPORTS TO WESTERN EUROPE

U.S. agricultural exports declined 14 percent, or $653 million, during the calendar year, 1958. More than half this loss was in our trade with five Western European countries. Our exports to United Kingdom dropped 18 percent in 1958 as compared with 1957. Shipments to West Germany were down 30 percent, to the Netherlands 14 percent, Italy 34 percent, and Belgium down 30 percent.

During this same period, imports of agricultural commodities from the Soviet bloc increased substantially, and these five countries entered into or specifically extended more than a score of trade agreements with Soviet bloc countries contemplating the importation of additional agricultural commodities.

At the outset it should be stated that a large part of the dollar decrease in agricultural trade with the United States was the result of an unrealistic export cotton pricing policy in the crop year 1957–58, which resulted in the foreign shipment of only 2,894,000 bales of American cotton during that year compared to 5,958,000 bales the previous year. With cotton now priced more competitively, there appears to have been a moderate overall increase in our exports to Europe in the calendar year 1959.

Nevertheless, even when these factors are taken into consideration, the export situation is disturbing. The economy of Western Europe is being rapidly reestablished. Consumer incomes and purchasing power are reaching new record levels. There is a growing demand for agricultural imports and the United States is not participating to full advantage in this increased trade. The Soviet bloc, on the other hand, has declared its intention of moving into this trade area and is making substantial headway.

The chairman of the House Committee on Agriculture considered this situation to be such as to warrant the assignment of a special study group to go to Western Europe and explore the specific question: "What can the United States do to increase its agricultural exports to this area?"

NATURE OF INQUIRY

The group visited West Germany, Italy, France, Belgium, Holland, and the United Kingdom. In addition, it discussed the trade situation in detail with our agricultural attachés from Switzerland and Austria. In each of the countries visited the group discussed the agricultural trade of that country with our agricultural attaché and the Embassy staff, with representatives of the trade, including both importers and U.S. trade representatives, and with local governmental officials. The conclusions represented here are those arrived at by the group as the result of all of these discussions.

It is to be emphasized that we did not engage in original investigation, having neither the time nor the facilities for such an operation. The matters reported here are based on the opinions, observations, and statements of the best informed persons in the countries we visited. We believe that they do represent the conditions respecting our exports and that there is in possession of the Department of Agriculture ample factual detail to support the reports made to us.

It is to be emphasized, also, that this is essentially a negative report, trying to point out what is wrong with our export programs and procedures. This was our assignment. The report, therefore, makes little mention of the positive factors in our export program which we recognize do exist and to which we want to give full credit and approval. These include: some excellent trade development programs being carried on jointly by U.S. commodity groups and our Foreign Agricultural Service; serious efforts on the part of

the American Farm Bureau Federation and the Great Plains Wheat Market Development Association to develop European export markets; aggressive and intelligent export sales programs being carried out by several commodity groups—notably the U.S. poultry industry; effective promotion at trade fairs and agricultural exhibits; and, last but not least, the effective work being done by our agricultural attachés and their staffs with the governments to which they are accredited and with trade groups within those countries.

It is to be remembered, also, that when you ask the question "What is wrong with our export programs?", you will get from importers all the accumulated gripes and complaints they can think of—some of which may be genuine, and some of which may be merely tactics to obtain better terms in future business. We believe that we have properly discounted this latter factor.

EUROPE AS A MARKET FOR AGRICULTURAL EXPORTS

Europe, including the United Kingdom, is today the most important market in the world for agricultural exports. It will become an even more important market as economic growth and technological development increase purchasing power and consumer demand. The area is not self-sufficient in many agricultural commodities and in overall agricultural production. As economic growth continues, Europe will need to import increasing quantities of many agricultural commodities.

The agricultural import market in Europe today is highly competitive. It is a buyers' market. Producing areas in all parts of the world are bidding for the European market, and the United States is not maintaining a competitive position commensurate with its long-run interests. If present export policies and procedures are permitted to continue, we will not share fully in the increased agricultural exports to Europe, and we probably will lose some of the markets we now enjoy.

Several of the U.S. products such as feed grains, dressed poultry, and frozen fruits which have a good potential for increased sales are not well known to European buyers. If U.S. producers are to share fully in the future growth of the European market they must develop merchandising programs in the European countries. The merchandising programs should acquaint the end users with the capabilities of the products and should promote such changes in trade practices as will permit U.S. products to be fully competitive with similar products from other countries on a price, quality, and continuous availability basis.

Since it may take some time for private trade organizations to develop the needed merchandising programs for those products in Government stocks, the Commodity Credit Corporation might well assist the private trade in developing effective European merchandising programs.

It was the conclusion of the study group that representatives of U.S. producers or of the Commodity Credit Corporation should be available at trade fairs to promote the placing of orders if U.S. products are featured in the exhibits. U.S. producers should have aggressive merchandising representatives in Europe who, working with and through the private trade, would obtain a larger share of the expanding European market.

GOVERNMENTAL RESTRICTIONS

Virtually all countries (including the United States) have some governmental restrictions against the volume and kinds of agricultural commodities which may be imported. The existence of such restrictions in several of the countries discussed in this report has been an important factor in the volume of our agricultural trade in certain commodities. These restrictions are not discussed in this report because they are outside the scope of our inquiry which was centered on finding out what we, ourselves, can do to improve our agricultural trade position in Western Europe. It was gratifying to find that many of these restrictions, particularly those associated with the dollar shortage following World War II, have been removed or modified. Where such restrictions still discriminate unfairly against U.S. agricultural commodities, it is to be hoped and assumed that our agricultural attachés and diplomatic missions will continue their efforts to bring about their removal.

SHORTCOMINGS OF OUR PRESENT EXPORT OPERATIONS

Throughout our discussions we constantly asked the questions: "How can our present export operations be improved? Why are we losing markets to other producing countries?" Almost without exception we received these major reasons for the U.S. inability to compete effectively in the European market:

(1) Lack of quality, condition, and dependability of U.S. imports: It was shocking to us to hear almost all persons interviewed give this as their first reason for our failure to compete more effectively on the European market. The casual attitude of many of our exporters with respect to the quality, condition, and dependability of exports to Europe is destroying markets rather than building them.

(2) Lack of an effective sales force: While other nations and their exporters are maintaining active sales forces in the major markets of Europe, we found that many American commodity groups and individual commodities have no sales representatives in many European countries. Economic growth is creating import markets in Europe which American exporters are simply failing to take advantage of, by not making a sufficiently serious and aggressive effort to sell products from the United States.

(3) Price: In some instances American commodities are priced out of the European market. Where the price is determined by the amount or the effectiveness of a government subsidy, it is absurd that this subsidy should not be established at a level which will permit American products to compete effectively in the European market with the frequently subsidized commodities of other countries. The spectacular example in this respect is, of course, the failure to price our cotton competitively during the 1958–59 marketing year.

(4) Lack of flexibility in our export operations: Because of the economic recovery and the currency stability which has been achieved by the Western European countries, virtually all are now ineligible for foreign currency purchases of our farm commodities under title I of Public Law 480. If we are to compete on even terms with other countries, however, we must offer more flexibility in trading than is possible now. Other countries in the European market are offering bilateral trade agreements, barter deals, two- and three-way exchanges, extended credit, sales on consignment, and other devices to encourage trade. As far as our Government is concerned, however, American commodities delivered into the European market must now be sold on the "cash on the barrelhead" basis. Since we have determined that these countries are now able to pay dollars for their imports, our only offer is cash sales for dollars and we are doing little or nothing on a governmental basis, to make possible the kind of flexibility in trading offered by other countries.

(5) Uncertainty of U.S. policies: There is a general feeling of uncertainty regarding U.S. export policies and programs. European importers have a feeling that they cannot rely on the United States as a continuing and dependable source of agricultural commodities on predictable terms. A major part of this uncertainty must be attributed to government, but a substantial portion may be traced to the attitude of the trade itself, which has looked upon Europe as a residual for occasional surpluses rather than as a substantial market for long-term export operations.

WHEAT

All European countries produce wheat and collectively they normally produce about three-quarters of their total requirements. Most European wheat, however, is of a soft variety which requires a certain quantity of hard wheat admixture to make an acceptable flour. The wheat market in Europe, therefore, is specifically a quality market. Unfortunately, the experience of European importers leads them to believe that they can be less sure of obtaining the quality wheat they want from the United States than from almost any other producing country. The following comment is typical:

When we buy a cargo of Canadian wheat, we can be confident that the wheat we will receive will be the grade we have ordered or better and that the protein content will be up to specification. When we buy a cargo of U.S. wheat, we can never be sure what we will get but we can assume that it will be at the very bottom of the permissible grade and possibly even lower.

Too many exporters, it would appear, are international traders who are after a quick profit rather than a long-term market for American wheat. Wheat that may have rated at the top of the grade when it left the elevator in Kansas City or Buffalo may be "slugged" when it is loaded into the boat until it barely meets the lowest specifications of the grade it is represented to be. This kind of procedure would seem to raise a question about the whole departmental policy of making CCC sales through private trade. If the CCC has high-quality wheat to sell, it should be able to dispose of that wheat with assurance that it will reach the buyer without adulteration or deterioration in quality and will assist in building, instead of destroying, future markets for American wheat.

An interesting part of this problem is that our wheat exports to Europe are largely in the hands of big, international grain dealers who operate throughout the world and who would just as soon sell wheat from Canada, Australia, or Argentina, as wheat from the United States. In fact, several of our largest wheat exporters are not even U.S. companies and, for various reasons, would probably prefer at times to deal in grain from another country than from the United States. Somehow, producers and others interested in selling U.S. wheat must be more active in Europe and in tailoring U.S. wheat exports to European needs.

Although the Department of Agriculture has for several years been concerned with this problem of quality in U.S. wheat exports to Europe, too little progress has been made in its solution. If the problem cannot be solved by tighter grade requirements or more stringent export inspection, the Department should make whatever recommendations for new legislation appear to be necessary. We can build our long-term wheat markets in Europe only by giving European buyers an assurance of dependable and continuing quality and they have no such assurance under our present export methods.

COTTON

Price and the uncertainty of Government policies are apparently the No. 1 handicap to the United States maintaining its competitive position in cotton exports to Europe. In the marketing year 1958–59, American cotton was priced 5 to 7 cents above the world market. This was a result of the action of the Department of Agriculture in establishing the export subsidy. In the current marketing year, a more realistic

export subsidy has been established and U.S. cotton is more nearly competitive in European markets. Most of those to whom the group talked in Europe, however, felt that the cotton subsidy should be established on a day-to-day basis, as in the case of grains, rather than on a preannounced, established price. Since virtually every other cotton-producing country operates its export programs with some type of governmental subsidy or assistance, it is hard to understand why the United States should not adopt the policy of making its cotton competitive with all other cotton on world markets on a day-to-day basis.

Although there were fewer complaints about cotton quality than there were about the quality of wheat, such complaints were not entirely absent. It is difficult for many European buyers to understand why U.S. cotton could not be sold on the basis of Government grades and staples instead of on the basis of the exporter's private grading system. They point out that a cotton user needs to be able to depend on the grade and staple of the product he is buying, since his operations are usually set up to accommodate a certain type of cotton. Where cotton is purchased on a private grade, instead of on established U.S. grades and staples, the buyer not only may be disappointed in the quality of cotton he receives, but he finds it extremely difficult to secure a price adjustment.

To some extent our cotton export trade to Europe also suffers, as does wheat, from the domination of the market by a few large, international companies. Some of these companies not only operate as brokers and exporters in other countries but have actual proprietary interest in cotton produced in other countries and would, presumably, be more eager to sell their own cotton from some other area than cotton from the United States.

FEED GRAINS

Europe is an expanding market for feed grains. As consumer incomes increase, there is a growing demand for livestock products, which in turn requires additional feed grains. Some of this demand will be met by expanded production in Europe but there will remain, apparently, a very significant and a growing feed grain import market. Whether the United States obtains its share of this market will apparently depend on three things: (1) Market development to create demands specifically for the grains we produce, (2) the quality of the grains we send to Europe, and (3) a real sales effort on the part of U.S. feed grain producers and exporters. If the selling is left exclusively to the large international grain traders, it can be assumed that their efforts to sell feed grains produced in other areas of the world will be at least as great as their efforts to sell feed grains produced in the United States. We cannot escape the conclusion that if U.S. producers of corn, grain sorghums, and other feed grains want to take advantage of the growing market for these commodities in Europe, they must get their own salesmen into the European market areas and keep them there.

They must also see that the quality of their product is maintained. A specific example of the importance of this is to be found in the United Kingdom, where a brand new broiler industry is creating a demand for corn and other feed grains. Within the past 2 or 3 years enterprising Britishers have started in the United Kingdom a broiler production industry patterned directly after the highly efficient broiler production operations in the United States. The wide acceptance of this product is indicated by the fact that in London the traditional fish and chips shops have virtually disappeared and have been replaced by chicken huts and similar restaurants specializing in broilers.

U.S. corn is priced competitively on the world market and we have had a very favorable position on imports of corn into the United Kingdom. This position is being seriously jeopardized, however, by the poor quality and condition of some of the corn which has been shipped to this area. We were told of several shipments of corn which arrived in the United Kingdom in such condition as to be virtually unfit for any use. Apparently, perfectly good hard yellow corn of low moisture content had been mixed at the seaport with enough corn of high moisture content to bring the total down to the very bottom of tolerance for the grade. During the ocean voyage the wet corn had so deteriorated the whole shipment that it was virtually useless on arrival. This may represent a quick profit for the exporter but it is not the way to maintain and expand a market of great importance which can be ours if we will provide a quality product at a competitive price.

SOYBEANS AND GRAIN SORGHUMS

Although classified among the feed grains, soybeans, and grain sorghums require special mention. Some excellent market development work has been done on both these commodities by the Grain Sorghum Producers Association and the Soybean Council of America. In every country we were told, however, that these promotional efforts might in large part be wasted as far as American producers are concerned because there are virtually no salesmen in Europe trying to make sales of these particular commodities. The main thing that is needed, we were told repeatedly, is more salesmen spending their full time in Europe, familiar with the needs and the buying practices of European importers, and able to advise them how to use our products to the best advantage, with sales books in their pockets ready to take advantage of the promotional endeavors of the industry organizations. Perhaps an export sales cooperative, such as is maintained by tobacco producers, would be helpful in this situation.

Questions of quality have also been raised in connection with American soybeans. In the past 2 years, soybeans from Red China have moved into Europe in increasing volume. Comparing these imports with those from the United States, one Government official had this to say:

There have been difficulties with U.S. contracts for soybeans recently, both as regards the quality of the supplies (Manchurian beans are said to have up to 1 percent higher oil content than American) and also as regards the amount of adulteration or admixture. A further point is that Manchurian suppliers are very forthright about allowances for such things as excessive moisture content or reduced oil yield, whereas the American shippers take a very unyielding attitude toward claims under these headings.

DRY EDIBLE BEANS

Another commodity in which the lack of salesmen in Europe is apparently seriously hurting our competitive position is that of dry edible beans. Although the United States consistently produces an exportable surplus of dry edible beans and although Europe is a substantial market for such beans, we were informed that there is not in the whole of Europe one single salesman devoting his time exclusively to the sale of American beans into the European market.

FRUITS AND VEGETABLES

Europe is the largest consumer of citrus fruits in the world, exceeding the United States in every category except grapefruit. Because of the shipping distance involved, it is difficult for the United States to compete pricewise in the European market. It is apparent, therefore, that in these commodities emphasis must be placed on quality, condition, and reliability of supply. It is equally evident that our exporters have not been devoting enough attention to these factors. In virtually every country we visited, there were reports of American fruits arriving at their destination in poor condition. Citrus fruits arriving with as much as 36 percent rot in the shipment were reported, for example.

With respect to fruits and vegetables, an authoritative publication sums the situation up in the following words:

Not only have foreign (other than United States) competitive supplies been increasing and improving in quality, but foreign exporters have been directing more attention to marketing problems. They have increasingly offered advertising, scheduled selling on a consignment basis, panel arrangements, or other devices to gain or maintain a foothold in foreign markets. With even larger supplies promised in the future, the competitive race for a share of the world market in horticultural products is very great indeed.

The U.S. industry will be forced to meet these competitive problems by increasing efforts toward maintaining high standards of quality and condition for products exported to oversea markets. Prior to the war, U.S. products often were unusual in maintaining consistent standards, but in recent years the quality of some competing products has improved relatively more than that of U.S. items.

PROCESSED FOODS

Europe is just beginning to experience the same kind of revolution in the retailing and the home handling of food that has taken place in the United States in the past generation. Supermarkets and self-service stores are just beginning to appear in Europe and their acceptance and development there will probably be comparable to that in the United States. Many homes are experiencing the advantages of mechanical refrigeration, including freezing compartments, for the first time. As these developments take place there will be a growing shift on the part of consumers to prepacked and processed foods. In the opinion of those most familiar with the subject, there will be a substantial market for American processed foods but the extent of this market will depend almost entirely on the quality and dependability of these food products.

Our market will not be improved, for example, by instances of unreliability such as one reported to us. A German importer contracted for a very substantial order of canned green beans from a U.S. processor and had the entire shipment sold to his customers. When the shipment arrived, however, there were only two-thirds as many cases as he had ordered so that he had the unenviable (and unprofitable) job of canceling one-third of the sales he had made.

American processed foods have had a high reputation in Europe for quality and dependability. Since most of them must sell in the retail market at higher prices than local products, it is essential that their reputation of premium quality be maintained if they are to keep their place in this rapidly expanding market.

RECOMMENDATIONS

1. Quality and condition of exports: That the Department of Agriculture undertake an immediate study to reevaluate its progress to date and to determine what more can be done to improve the quality, conditions, and reliability of U.S. exports of agricultural commodities to the European area. It should consider stricter grade standards, more rigid export inspection, the requirement that commodities exported under Government subsidy be exported on Government grade only, and better procedure than now exists for the filing of complaints by foreign importers and for price adjustments on the basis of such complaints when justified. We believe the Department has available to it now ample data on which to base its studies and that it should promptly take such action as can be taken administratively and recommend to Congress any additional action requiring new legislation.

2. Price: pricing of those commodities which are exported under Government sub-

sidy should be done in such a manner that the commodities are fully competitive on the European market with similar commodities from other areas. More care should also be exercised that the quality of the commodities exported is the same quality on which the exporter receives his subsidy.

3. Government sales force: The various laws relating to the disposal of surplus agricultural commodities require that sales shall be made insofar as practicable through the established channels of private trade. The Department of Agriculture has interpreted these provisions to require that all sales shall be made in this manner. There has been established in the Department of Agriculture and Office of General Sales Manager to assist in disposing of these surplus commodities but because of the policy of making all sales through private trade, the office has been relatively inactive.

The lack of private salesmen for certain American commodities in the European area has been commented on in this report. In order to fill this gap and at the same time not violate the legislative provisions regarding sales through private trade channels, it is recommended that the Department of Agriculture consider setting up a sales system somewhat along the following lines:

(1) Establish at strategic locations in Europe representatives of the Office of the General Sales Manager to work directly with importers and the trade to develop possible sales of those commodities which are in surplus.

(2) Establish teletype or other means of rapid communication between each salesman and the sales manager's office.

(3) Notify the U.S. private trade in each commodity of the arrangement being set up and establish a list of exporters who indicate their willingness to pay for collect telegrams informing them of sales opportunities.

(4) When the European representative of the Sales Manager's Office finds a possible sale for a surplus agricultural commodity, he could transmit this immediately to Washington where it could be sent out simultaneously to all of those in the trade who had indicated their interest and willingness to pay for such telegrams.

(5) Specific sales offers could then be made directly by the American exporter to the potential buyer in the foreign country.

This proposal was outlined to several of our agricultural attachés in Europe and opinion was divided as to whether or not it would be helpful and workable in their particular countries in moving our agricultural commodities. At least, we feel it merits the most careful consideration by the Department of Agriculture.

4. Flexibility in sales terms.—Since the close of World War II, our agricultural exports to Europe have been stimulated by various Government programs, including shipments under the Marshall plan and the Mutual Security Act, sales for local currency under title I of Public Law 480, and barters strategic and other materials. The countries of Western Europe have achieved an economic and monetary stability where they are no longer considered generally eligible for sales under title I of Public Law 480. At the same time, most of them have been ruled ineligible for Government-sponsored barter contracts with respect to most of our surplus commodities. The result is that, except for such terms or trading agreements as private exporters may enter into with private importers in the other country, our export sales to Europe are virtually on a cash dollar basis. As has been pointed out, in this highly competitive market where other producing countries are offering bilateral exchanges, barter, sales on consignment, and other trade concessions, this cash on delivery policy can be a serious handicap to the maintenance of our competitive position in this market. It is recommended that the Department of Agriculture and the Department of State give serious study to this problem with a view to inaugurating or reestablishing governmental programs which will permit American exporters to compete on a more nearly equal basis with exporters from other countries.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.
